Introductory Note

THE contrast between the dainty picture books that are provided to entice the school children of the present along the paths of knowledge, and the sparsely illustrated volumes conned by the little folk of two or three generations ago, is very great; and yet the old books seemed beautiful to the children then, and the charm all comes back when a person of middle age or beyond happens on one of these humble friends of his youth. What an aroma of the far-gone days of childhood hovers in the yellow pages! The scenes in the schoolroom rise in the memory, one is young again, and has in gentle illusion the same feelings and the same juvenile companions as of old.

But the pleasure of seeing the books of our schooldays is seldom experienced; for, once their work was done, they received scant care, and most of the multitude that were printed have perished utterly. The wear and tear of use and the accidents and exigencies of time have made way with them, and to-day one could hardly find the books he studied as a child save by long and patient search, and perhaps some of them not at all. My

own collection of school-books has been largely gathered by exploring the nooks and corners of the old bookshops from New England to South Carolina; but many things I could not get, and I have been greatly aided in compiling this volume by the collections of various individuals and institutions. I am especially grateful to the American Antiquarian Society of Worcester, the Essex Institute of Salem, the Deerfield Museum, the Connecticut Historical Society, and to Mr. Albert C. Bates of Hartford, and Mr. George A. Plimpton of New York. I also am much indebted to the Henry Barnard Collection, now at Hartford, but probably soon to be sold and transferred elsewhere — a collection which includes the American publications used in our schools from the beginnings down to 1850 more completely than any other in existence.

My readers will doubtless notice that I have dwelt on the educational history of Massachusetts rather than on that of any of its neighbors. This I have done because it seems to me to possess unrivalled interest. Massachusetts has always been a pioneer in educational experiments, and where it has led the way the sister states have followed. Its experience has been a constant aid to them, and the attention it has given to education has always been far above the average for the whole country.

CLIFTON JOHNSON.

A Melancholy Scene. From Town's *Second Reader*, 1848.

Old-time Schools and School-Books

I

BEGINNINGS

IN 1642, twelve years after the settlement of Boston, the General Court of Massachusetts, "taking into consideration the great neglect of many parents and guardians in training up their children in learning and labor which may be profitable to the commonwealth," ordered that the selectmen in every town should have power to take account of all parents and masters as to their children's education and employment. Each town was to be divided by its selectmen into sections—a section to each selectman; and for the families in his apportionment the selectman was responsible. He must see that all the children learned to read, and that they were taught to understand the principles of religion and the capital laws of the country, and, finally, he must make sure that they were put to some useful work.

The education required could be provided by the individual parents in their homes, or it could be provided in any manner they chose to devise col-

lectively. Nothing was said about schools, and the law which is the foundation of the school system of the state was enacted five years later. The preamble starts with the premise that "It being one chiefe project of y^t ould deluder, Sathan, to keepe men from the knowledge of y^e Scriptures," effort must be made to thwart this "ould deluder y^t learning may not be buried in y^e grave of o^r fath^{rs} in y^e church and commonwealth":—

It is therefore ord^{ed}, y^t ev^{ry} towneship in this iurisdiction, afr^e y^e Lord hath increased y^m to y^e number of 50 household^{rs}, shall then forthwth appoint one wthin their towne to teach all such children as shall resort to him to write & reade, whose wages shall be paid eith^r by y^e parents or mast^{rs} of such children, or by y^e inhabitants in gen^{all}, by way of supply, as y^e mai^{or} p^t of those y^t ord^r y^e prudentials of y^e towne shall appoint.

The law also made it obligatory that parents, where schools were lacking, should teach "their children and apprentices perfectly to read the English tongue"; and instances are not rare of persons brought before the courts and admonished for neglecting this duty. Another provision of the law was that any town containing one hundred families should "set up a gramer schoole, y^e master thereof being able to instruct youth so farr as they may be fited for y^e university." The university referred to was Harvard, for the establishing of which arrangements had been made in 1636.

In England a "gramer schoole" meant one where Latin was the staple. English grammar, the study

the name most suggests, was not taught in such a school at all. But in this country the grammar schools, with few exceptions, were Latin and English schools combined. Even in those of the early Boston schools which were distinctly "Latin Schools," there appears to have been an usher, as the master's assistant was called, who taught English. The grammar schools rounded out and completed the educational system of Massachusetts, and this colony was decidedly in advance of all the others in providing for a general distribution of knowledge.

The legislature of Connecticut soon followed the example of Massachusetts in enacting a system of school laws; but in all the other colonies each parish or settlement was a law unto itself in educational matters, and the schools were mainly under the patronage and control of the church.

The claim has been made that New Amsterdam had a free school before Boston did; but its first school, established in 1633, was a public school in only a very limited sense. It was maintained for the town's children of the Dutch Reformed Church and no others. The citizens were complaining fourteen years later that no schoolhouse had yet been built, and that "the school is kept very irregularly, by this one or that, according to his fancy, as long as he sees fit." Ten years more passed, and we find the Manhattan folk humbly representing to the Dutch West India Company, under whose auspices they were governed, that there was no school in the colony where their children could learn Latin; that there was no such school nearer than New England;

and they prayed the honorable company to send a man capable of teaching this language. Their request was granted, but by that time Massachusetts had half a score of flourishing Latin schools, and seventeen classes had been graduated from Harvard.

The early schools were supported partly by the subscriptions of the well-to-do, partly by the rentals of lands set aside for the purpose, partly by tuition fees, and partly by taxes. There was no uniformity in the methods the different towns had for meeting their school expenses. Some took one way, and some another, but most adopted a combination of several ways; and while there was usually a town rate, this was only to supplement the other sources of income. Each town in Massachusetts had full control of its own schools, and the people voted in their regular town meetings what they would spend on them, how raise the money, who should teach, and what should be the amount of compensation. All the details of the school economy were attended to by the town officers.

The pay received by the teachers was meagre, and not always easily collected. In Northampton the first teacher was a town farmer by the name of Cornish, who, in 1664, was voted "six pound towards the scoole & to tacke the benifet of the scollers provided that he teach Six months in the yeare together." The total expense was in this instance shared between town and pupils; but just what fees resulted to Farmer Cornish from being allowed to "tacke the benifet of the scollers" is uncertain. At best, the remuneration could hardly have sufficed

for the support of the master and his family, and he must have continued largely dependent on agriculture. He was apparently a man of considerable ability and standing in the town, for the records give his name the prefix of "Mr.," which was then an honorable distinction. Yet he had a habit of profanity, and once was fined twenty shillings by the court for cursing.

A year or two later his successor received an annual ten pounds from the town, while the scholars paid "ffowre pence pr weeke for such as are in the primer & other English books and Six pence pr weeke to learne the Accidence wrighting Casting Accounts." The instruction was practically all rudimentary. Even in the "Accidence," by which was meant Latin grammar, probably only the slightest outlines were taught. It is doubtful if the pupils were generally supplied with books, and in "Casting Accounts" the master presumably imparted nothing but his own knowledge of the art.

In 1687 the town changed its method of paying the master. He was still to collect tuition fees, but whatever he lacked of getting forty pounds was to be made up by the town. There was always much delinquency in paying on the part of those who sent children to school, and when the teacher was thus relieved from any absolute necessity for following up his debtors, it can easily be imagined that the amount collected dwindled. The result was that the town voted shortly afterward to allow "the Scholers to go free."

It was customary to pay the early masters in prod-

uce, agreement being made in hiring the teacher just what this should be. An old Dedham contract calls for two-thirds in wheat and the other third in corn; and Deerfield, in 1703, covenants to pay the master

Twenty and five pounds in manner following: y^t is to say They have by bargin liberty to pay him y^e one 3^d part of s^d sum in Barley and no more: y^e other two 3^{ds} in other grain y^t is to say in indian corn: peas: or Rye in any or all of them: all these afore mentioned to be good and merchantable.

The net salary of the schoolmasters in most towns, after allowing a moderate sum for board, is estimated to have hardly exceeded, as expressed in modern terms, sixty or seventy dollars.

I have spoken of tuition fees. They were an accepted part of the educational financing in nearly all the old towns, and free schools were many years discussed before the majority of the towns adopted them. Free schools found favor with the poorer classes, but were opposed by the wealthy, especially the wealthy who had no children to send; and they did not become the rule until long after the beginning of the eighteenth century. Indeed, school support by taxation was not made compulsory in Massachusetts until 1827.

The first town to have a school supported by general taxation — that is, by a tax on all the property holders of the community — was Dedham. The date of the innovation was 1649. The town records show that the schoolhouse was "built together with a watch house, the length 18 foote, the wideness,

15 foote; two convenient windows in the lower room & one in the chamber." The watch house was "a leanto set at the back of the chimney sixe foote wide" and it projected beyond the corner of the house on either side two and one-half feet. It had a fireplace and it had "open windowes so that the watch might have an aspect 4 severall wayes." The building stood in the centre of the village on the borders of the parish green near the meeting house. In the schoolroom the scholars labored dur-

Schoolhouse erected in 1649 at Dedham, Mass.

ing the day, and in the lean-to a sentinel watched from the windows during the night. The master was permitted to keep the school in his own home in extreme weather; and during the heat of summer he might use the meeting-house, provided he kept it clean and mended all the windows that his boys broke.

For a hundred years we find frequent mention of keeping schools in the meeting-houses. Those early churches were never invested with the religious sanc-

tity that is attached to a church now. They were designed not only for places of worship, but for all gatherings as the people had need. Until after the beginning of the nineteenth century, meeting-houses were in some communities used for town meetings and even for sessions of the law courts. Occasionally the building was outgrown as a church and was then devoted to school use exclusively. This happened in 1664 in one of our Connecticut valley towns, and what had been the first meeting-house sheltered the master and his pupils for thirty years. The structure had been erected about a decade previous to its becoming a schoolhouse, and was "of Sawen Timber, 26 foot long and 18 foot wide, 9 foot high from the lower p^t of y^e cell to the upper part of the raisens."

It was decidedly superior to the log houses which sheltered the people, for most of the pioneer dwellings were of round logs, and the finest of them had nothing better in their walls than hewn logs. The meeting-house, however, was of material that could only be obtained by great manual labor. Saw-mills had long before been introduced in the vicinity of the settlements on the coast, but many years elapsed before any were possessed by the new towns inland, and the only means of sawing logs into timbers or boards was by use of a long heavy saw operated by two men, one standing on the log and the other in a pit below.

The meeting-house had a single doorway, two windows, and a chimney. The roof was of thatch. Probably the edifice never had a pulpit or pews.

Backless benches served for seats, and the change to a schoolroom was very easily made.

Most schools had to be content with buildings far less substantial than this one; yet the worst trouble was that the structures seldom received the attention they should have had when they began to get out of repair. We are given a rather startling impression of what these conditions might be by a master who, writing in 1681 of the "inconveniences" of his schoolhouse, describes

the confused and shattered and nastie posture that it is in, the glass broke, and thereupon very raw and cold; the floor very much broken and torn up to kindle fires, the hearth spoiled, the seats some burned and others out of kilter, that one had well-nigh as goods keep school in a hog stie as in it.

A very prolific source of annoyance to the schoolmaster was the supply of firewood. The parents were required to bring a certain quantity of wood to the schoolhouse for each of their children attending. Thus, in 1699, we find one of our New England towns ordering "that all and every Scholler bring one load of wood though they goe but two months, that is two months from the beginning of October to y^e first of Aprill." During the other portion of the year little or no fire was needed. Those who failed to do their duty in this matter of fuel were to pay a fine of four shillings. A penalty of some sort was a necessity; and it is explained that many who "sent their children to Schoole were too negligent in bringing of wood for want whereof the Schoole oft

times was omitted." An enormous fireplace was the sole means of warming the schoolrooms of that day, and in sharp weather it consumed the wood most ravenously. The vote mentioned above was intended to remedy the chronic vanishing of the school woodpile, but it was not wholly effective, and the next year the selectmen were directed to prosecute delinquents.

Such an experience was not at all exceptional, and most of the towns passed special acts applying to the case. Sometimes the children of parents who did not do their part in keeping up the woodpile were turned out of the school. Sometimes they were refused "the benefit of the fire," and the master saw to it that they sat in the schoolroom's bleakest corner. Another rule was that the schoolboys of households whose parents sent the wood in sled length must cut it up where it lay in the school-yard.

Many of the towns provided a grammar school before they did an elementary. It seems to have been generally understood that children would be taught to read before attending the grammar schools. Thus in an agreement with a teacher of the Roxbury grammar school we find he is to "use his best skill and endeavor, both by precept and example, to instruct in all scholastical, moral, and theological discipline the children of the proprietors of the school — all a-b-c-darians excepted."

We get suggestive glimpses of the routine of the early schools in the Dorchester school rules of 1645, which provided that for seven months in the warmer

part of the year the master should every day begin to teach at seven o'clock in the morning and dismiss the scholars at five in the afternoon, while in the colder and darker months of the remainder of the year he was to begin at eight and close at four. There was to be a midday intermission from eleven to one, except on Monday, when the master

shall call his scholars together between twelve and one of the clock to examine them what they have learned, at which time also he shall take notice of any misdemeanor or outrage that any of his scholars shall have committed on the sabbath, to the end that at some convenient time due admonition and correction may be administered.

He shall diligently instruct both in humane and good literature, and likewise in point of good manners and dutiful behavior towards all, especially their superiors. Every day of the week at two of the clock in the afternoon, he shall catechise his scholars in the principles of the Christian religion.

He shall faithfully do his best to benefit his scholars, and not remain away from school unless necessary. He shall equally and impartially teach such as are placed in his care, no matter whether their parents be poor or rich. (A necessary warning, for the well-to-do and influential were given a preference in most affairs of the times.)

It is to be a chief part of the schoolmaster's religious care to commend his scholars and his labors amongst them unto God by prayer morning and evening taking care that his scholars do reverently attend during the same.

The rod of correction is a rule of God necessary sometimes to be used upon children. The schoolmaster shall have full power to punish all or any of his scholars, no matter who they are. No parent or other person living in the place shall go about to hinder the master in this. But

if any parent or others shall think there is just cause for complaint against the master for too much severity, they shall have liberty to tell him so in friendly and loving way.

The emphasis laid on religious instruction in these rules was very characteristic of the colonial period. The children were perpetually enveloped, week-days and Sundays, in an atmosphere saturated with religious forms, services, ideas, and language. To illustrate how omnipresent this religious atmosphere was, I cannot do better than to cite the occasion when Judge Sewell found that the spout which conducted the rain water from his roof did not perform its office. After patient searching, a ball belonging to the Sewell children was discovered lodged in the spout. Thereupon the father sent for the minister and had a season of prayer with his boys, that their mischief or carelessness might be set in its proper aspect and that the event might be sanctified to their spiritual good. Powers of darkness and of light were struggling for the possession of every youthful soul, and it was the duty of parents, ministers, and teachers to lose no opportunity to pluck the children as brands from the burning.

The efforts to make the children religious were not by any means uniformly successful. No doubt the insistence of the elders on the solemnities often deadened their charges' sensibilities. At any rate, character and conduct among the young people were far from perfect. A committee appointed to see if the instruction at Harvard remained true to its early adopted motto, *For Christ and the Church*, reported

that the Greek Catechism was recited regularly by the freshmen, and that Wollebius's *System of Divinity* was diligently pursued by the other classes, while on Saturday evening, in the presence of the president, the students repeated the sermon of the foregoing Sabbath. "Yet the committee are compelled to lament the continued prevalence of several immoralities, particularly stealing, lying, swearing, idleness, picking of locks, and too frequent use of strong drink."

Boys began to attend the grammar schools when they were seven or eight years of age, and now and then a youngster entered the Boston Latin School no older than six and one-half. Not infrequently the boys had by that time made considerable progress in Latin, and sometimes the merest infants were taught by doting parents to read this learned language as soon as they were taught to read English. Precocity was encouraged, not alone by intelligent parents, but by leading writers and thinkers. A good example of what was expected of the little ones is furnished by Isaac Watts's *The Young Child's Catechism*. The first half of it was designed for learners of "Three or Four Years Old," and the questions for these beginners included such as

Have you learnt to know who God is?

What must you do to escape God's Anger, which your Sins have deserved?

What must become of you if you are wicked?

The answer to the last is, "If I am wicked, I shall be sent down to everlasting Fire in Hell among wicked and miserable creatures."

The text-book equipment of the old schools was exceedingly meagre, and the average schoolboy had only a catechism or primer, a Psalter, and a Testament, or a Bible. For Latin students this list would have to be extended, but ordinarily it comprised all a boy ever used as long as he attended school. Still, scattered copies of the school-books put forth in England were possessed, and these were not without influence in the schools and on the attainments of the pupils. The text-books were practically all of foreign authorship. Indeed, I believe the only school-book of American origin prior to the Revolution was a little Latin grammar by Ezekiel Cheever. Cheever was one of the most notable of the early schoolmasters. He taught in New Haven and some smaller places; but for the last thirty-eight years of his life was master of the Boston Latin School. He died at his post in 1708, at the age of ninety-four, after having given seventy years of continuous service to the New England schools. His death was widely mourned, and he was long held in affectionate remembrance, for he was more patient with the slow boys and less severe and brutal with all boys than schoolmasters of that age were wont to be.

Full to the brim with Puritan theology, he wrote a book called *The Scriptural Prophecies Explained*, and he was unflagging in earnest endeavors to help his boys to become Christian men. The text-book of his authorship to which I have referred was, *A Short Introduction to the Latin Tongue*, generally known as "Cheever's Accidence." It enjoyed for over a century immense popularity. The first edi-

tion appeared in 1645, and the book was republished as late as 1838. In the grammar schools Cheever's was usually the first Latin book, and after the boys had worked their way through that they plunged into the dreary wilderness of "Lily's Grammar" with its twenty-five kinds of nouns, its seven genders, and other things in proportion—all to be wearisomely committed to memory. The purgatory of this grammar was early recognized, and Cotton Mather said of it, "Persisting in the use of Lily's book will prolong the reign of the ferule." The only copies I have seen have been revisions of the original, yet the one I own, dated 1766, states that the unrevised is still printed and for sale. The author of the work died in 1523, and one would think that in the two centuries and a half since the book first appeared it would have been entirely supplanted.

A more attractive book to the Latin boys was John Amos Comenius's *Visible World* which was published in 1658. Aside from A B C primers, this was the first illustrated school-book ever printed. Comenius, born in 1592, was a Moravian bishop, and the most distinguished educational reformer of his time. He wrote a number of books, but the one that attained the widest circulation was this "*Visible World: or a Nomenclature, and Pictures of all the chief things that are in the World, and of Men's Employments therein; in above an 150 Copper Cuts.*" Every subject treated had its picture, and below the engraving was a medley of explanatory little sentences in two columns, one column in Latin,

	<i>Cornix cornicatur, á á</i> <i>The Crow crieth.</i>	A a
	<i>Agnus balat, b é é é</i> <i>The Lamb blaiteth.</i>	B b
	<i>Cicáda stridet, cí cí</i> <i>The Grasshopper chirpeth.</i>	C c

the other in English. By such means the pupil was supposed not only to learn Latin, but to absorb a large amount of general knowledge concerning the industries and other "chief things that are in the World." It was a crude effort to interest the child, and was encyclopædic, dry, and verbal, having more the character of an illustrated dictionary than a child's reading-book; yet for one hundred years this was the most popular text-book in Europe, and it was translated into fourteen languages.

Other Latin books in common use were Æsop, Eutropius, and *The Colloquies of Corderius*; and for the older boys Cæsar, Ovid, Virgil, and Cicero. In Greek they had the grammar, the Testament, and Homer. Thus they fitted themselves for the university, which made very exacting requirements in the dead languages, but paid little attention to the progress its prospective students had made in science, mathematics, or anything else. The Harvard terms of admission were these:—

Whoever shall be able to read Tully, or any other such-like classical author at sight, and correctly, and without assistance to speak and write Latin both in prose and verse, and to inflect exactly the paradigms of Greek nouns and verbs, has a right to expect to be admitted into the college, and no one may claim admission without these qualifications.

The classical requisites noted above become quite impressive when it is remembered that the law ordered every town in Massachusetts of a hundred families to provide this knowledge.

The

Most of the teachers of the early Latin schools had received a college education in England, and were men of more than ordinary capacity and experience. Our own Harvard, too, sent forth many graduates who found places in the schools as well as in the pulpits. The teachers were all deeply imbued with that religious spirit which characterized

THE ENGLISH SCHOOL-MASTER.

Teaching all his Scholars, of what
age soever, the most easy, short, and perfect or-
der of distinct Reading, and true Writing our
English-tongue, that hath ever yet been
known or published by any.

Portion of the Title-page of a popular Text-book first published in 1596.

the Puritan epoch, for this was the trend of their whole training. Their college studies were the studies of a divinity school. There was some arithmetic and geometry, physics and science, but as for the rest—it was grammar, logic, and rhetoric; politics and ethics; Chaldee, Hebrew, and Syriac; biblical and catechetical divinity.

The earliest spelling-book was Coote's *The English School-Master*, a thin quarto of seventy-two

Frontispiece to a Speller entitled, *A Rational Way of Teaching*, 1688.

pages, first published in 1596. It continued to be extraordinarily popular for over a century. According to the title-page, "he which hath this Book only, needeth to buy no other to make him fit from his Letters to the *Grammar-School*, or for an *Apprentice*." Besides spelling, it contained arithmetic, history, writing lessons, prayers, psalms, and a short catechism. To add to the intricacy, much of the text was printed in old English black letter.

Another ancestral speller was *England's Perfect School-Master*, by Nathaniel Strong, London, 1676, of the editing and use of which the author says in his

The Epistle to the Reader

UPON consideration of the bad reading of many, who know not how scarcely to spell any word rightly: I have sorted all the words I could think of and ranked them in particular Tables. By this Book a Lad may be taught to read a Chapter perfectly in the Bible in a quarter of a years time. I have likewise added unto this Book certain other necessary Instructions, and useful Varieties, as well for writers as Readers. The whole I crave God's Blessing upon, and leave it to thy candid acceptance; Remaining

Thine to serve thee or thine,

NAT. STRONG.

One curious department, covering fifteen pages, consists of "Some Observations of Words that are alike in sound, yet of different signification, and spelling." Their use and meaning are indicated thus:—

I Saw one *sent* unto the Hill's *ascent*,
Who did *assent* to me before he went.

Above thy reach a *Spire*-steeple stands,
Aspire not high, thou *Spyer* out of Lands.

The latter portion of the book is devoted to Latin exercises, "Forms of Letters," and arithmetic. From the arithmetic I quote these two bills, the items of which have a strangely unfamiliar look:—

A Shoemaker's Bill.

1 pair Cloth Shooes and Golfhoses, with Ferry Boots
 2 pair of Shafhoons for Boots
 9 dozen of Wooden-heel'd Shooes
 For-waxing a pair of Boots
 2 pair of Women's Lac'd Shooes and Slaps

A Taylor's Bill.

Mr. *John Saddler*, his bill.

For a Set of Gold and Silver Buttons
 For Tabby for lining the Coat
 For seifing Flap
 For Cottoning for the Hofs and Pockets
 For canvas for Stays and Stiffenings
 For Belly-Pieces, Hooks, Eyes, and Stay-Tape
 For Silk and Galloon

The lessons in the book are supplemented by several prayers, and then at the bottom of the final page there is this "Advertisment," in which the author says he has a school

where Youth may be fitted for the Univerfity: Also taught to write all manner of Fair Hands, with Arithmetick:

Likewise Boarded with a great conveniency. My encouragement where I am being as yet but small; If any Person can advise to any Place or Parish wanting a School-master; upon assurance of a competent livelihood, I shall soon quit my present concerns, and readily accept it.

The ministers had much to do with the public schools in all places, large and small. Their supervision was constant and vigilant. The church was then supported by the whole town, and its affairs regulated in the town meetings; and the minister was a town officer. He was employed for the religious instruction of the people; and as the children were an important part of his charge, his visits to the schools were frequent. He examined the children in the catechism and in their knowledge of the Bible, and sometimes questioned them on the sermon of the preceding Sunday. In 1710 we find it was expected of the Boston ministers that they would, on their school visits, pray with the pupils, and "entertain them with some instructions of piety specially adapted to their age and education"; and something of this sort continued to be the duty of the ministers in our rural towns until the middle of the last century. The rural minister also often rendered service as a teacher, especially as a teacher of Latin in towns that had no grammar school. Many ministers boarded several students, as well as taught them.

When other means of education were lacking, the laws ordered that the parents themselves should impart instruction to their children. But most communities contrived at least to have a dame school.

The School Dame.

There was always some woman in every neighborhood who, for a small amount of money, was willing to take charge of the children and teach them the rudiments of knowledge. The older and larger towns had these dame schools as well as the pioneer villages, and they were everywhere a chief dependence for elementary instruction; yet they were seldom at first town schools, and none of them were free for a long time. The dame school was an English institution, and the description of it by the poet Crabbe as it existed across the Atlantic would very well fit it here: —

. . . a deaf, poor, patient widow sits
And awes some thirty infants as she knits;
Infants of humble, busy wives who pay
Some trifling price for freedom through the day.
At this good matron's hut the children meet,
Who thus becomes the mother of the street.
Her room is small, they cannot widely stray,
Her threshold high, they cannot run away.
With band of yarn she keeps offenders in,
And to her gown the sturdiest rogue can pin.

The school dame did not usually find the labor of teaching very onerous. While she heard the smaller pupils recite their letters, and the older ones read and spell from their primers, she busied her fingers with knitting and sewing, and in the intervals between lessons sometimes worked at the spinning-wheel. An interesting instance of school-dame industry occurs in the annals of Northfield, Massachusetts. The first teacher in the town was a woman hired to care for a class of little ones twenty-two weeks in

the warm season. Besides the neighbors' children she had four of her own to look after, yet her en-

ergies were by no means exhausted, and the semi-leisure of the school-room allowed her to work quite steadily making shirts for the Indians at eight pence each.

The beginner's chief aid in starting on the road to learning was a hornbook — not really a book at all, but simply a bit of printed paper about three by four inches fastened on a thin piece of board. The name "hornbook" originated in the fact that the printed slip was covered with a translucent sheet of horn,

A Typical Hornbook.

"To save from fingers wet the letters fair." A light strip of metal, usually brass, was fastened with several short nails or tacks around the edges of the

horn to keep it in place. The board had a handle at one end, and occasionally this handle was pierced with a hole so that a string could be attached and the toddling owner of the hornbook could carry it suspended from his neck. At the top of the paper

Revolving Alphabet.

Diameter of the original, five inches.

was printed the alphabet, capitals, and small letters; and then in orderly array the vowels, then double lines of ab, eb, ibs, and the benediction, "In the name of the Father, and of the Son, and of the Holy Ghost. *Amen.*" The remaining space was devoted to the Lord's Prayer, unless, as was sometimes

the case, this was supplemented at the bottom by the Roman numerals.

A curious successor to the hornbook was produced by a Hartford publisher in 1820. It was called "The Revolving Alphabet or Child's Instructive Toy," and consisted of two wooden disks about five inches in diameter with a circular sheet of paper between them. On one side of the paper was printed the alphabet; on the other side a series of little syllables. By turning a thumb-piece the paper inside the disks could be made to revolve, and an aperture near the edge of one of the disks allowed you to see the printing, a short column at a time. I imagine this educational toy never had much vogue, and that few people have ever seen one.

II

COLONIAL SCHOOLS OF THE EIGHTEENTH CENTURY

THE early Massachusetts school laws decreed that any town neglecting to provide a school-master should be subject to a penalty of ten pounds. In 1701 the General Court, after declaring that the observance of this decree was "shamefully neglected by divers towns, and the penalty thereof not required, tending greatly to the nourishment of ignorance and irreligion, whereof grievous complaint is made," doubled the penalty, and enjoined all justices of the peace and grand juries to vigilantly attend to the law's execution. As a result, at nearly every session of the court there were towns "presented" for not maintaining the schools required by law, especially the grammar schools. Many excuses were offered — sometimes poverty, sometimes inability to secure a teacher. The poverty was often very real, for the colony had passed through King Philip's War, 1675-78, on which it had spent more than half a million dollars. Besides the expense, there had been great loss of life, twelve out of the ninety towns had been utterly destroyed, and forty others had been the scene of fire and massacre. A number of communities were so reduced that their share in the colony tax was remitted.

For a long time the fear of Indian invasion had a tendency to hold the settlers closely together, and in some of the towns it was forbidden to build beyond

A Salem Schoolhouse with Whipping-post in the near Street.

From a drawing made about 1770.

a fixed distance of one or two miles from the meeting-house. But now that the savages had been thoroughly subdued, the people began to push out into the wilderness, and new towns were planted and added to the commonwealth in quick succession. Many of them had no village nucleus. They either consisted of widely scattered farms, or of several isolated hamlets. The old towns, too, sent forth new shoots, and developed outlying neighborhoods. Thus the schooling of the children presented new

conditions and problems. All the children must be taught, and to reach them "moving schools" were devised—that is, the towns voted that a school should be kept for a part of the year in each of several vicinities. The Massachusetts town of Scituate ordered the school to be kept one-third at each end of the town and one-third in the middle; Yarmouth decided to have the school in five places varying from one to four months each; and in Sutton, where a more scanty education was provided, the school was kept at the discretion of the selectmen in four places, one month to each. It was permissible in some of the towns for the scholars to follow the schools, but this privilege was probably not much used. The various divisions of the town were called "angles" or "squadrons" at first, and later "districts." For a long period few of them had schoolhouses, but presently the school was made conditional on the district's erecting a building. By the middle of the century the towns began to allow the districts to draw their proportion of the school money and spend it as they liked. The schools ceased to be town schools, and the choice of teachers, their pay, and the time the schools should keep, was taken out of the hands of the selectmen.

The early dame schools had been privately supported, but they were gradually absorbed into the public school system, and we find such entries on the town records as:—

Paid Widow Walker ten shillings for schooling small children.

Paid for boarding schooldame, at three shillings per week.

However, in some towns no public provision was made for the youngest children until after the Revolution.

I have been describing educational conditions more particularly as they were in New England. Though far from ideal, these conditions were nevertheless better than in any other part of the country. Especially in the South, with its widely separated houses and few villages, the environment was in every way unfavorable for maintaining public schools. The children of wealthy planters were usually taught by private tutors, or sent to England to be educated; yet once in a while a planter would start a little school for the benefit of his own children and the other white children who chanced to live on or near his plantation. The teachers of such plantation schools were apt to be redemptioners and exported convicts. In Europe at this time the lot of the poor was extremely hard, and many persons came across the Atlantic solely to escape the inevitable misery at home. The captain of the ship that brought over a penniless man of this class was allowed to sell him for four years to pay his passage. It was also customary to transport men who had been convicted of small crimes and sell them for periods of greater or less length. When one of these unfortunates could read and write, he sometimes was purchased for a schoolmaster, and teachers of this kind were common both in the Southern and the Middle colonies. Not infrequently they were coarse and degraded, and they did not always stay their time out as is witnessed by advertise-

ments like the following in the newspapers of the period:—

Ran away: a Servant man who followed the occupation of a Schoolmaster, much given to drinking and gambling.

Among those who bought a bondsman for educational purposes was George Washington's father, and this bondsman was Washington's first schoolmaster. He was a slow, rusty old man by the name of Hobby. Besides doing duty as dominie he served as sexton, and in the intervals of teaching swept out the church and now and then dug a grave. The schoolhouse in which he taught is said to have stood in an "old plantation field"—a field exhausted by successive tobacco crops, and allowed to grow up to pines. Tradition relates that Hobby lived long enough to see his pupil rise to distinction. He was very proud of his own services as the boy's teacher, and was wont to boast it was he "who between his knees had laid the foundation of Washington's greatness."

After Hobby had laid this "foundation," his pupil attended another school for four or five years presided over by a Mr. Williams. If we are to believe one of Washington's early biographers, Mr. Williams "knew as little as Balaam's ass." Under him the boy in playtime became expert in running and wrestling, but in his studies failed to acquire either correct spelling or the commonest rules of English grammar. The book he perhaps learned most from at this time was one entitled *The Young Man's Companion*, which apparently came into his

possession when he was about ten. It claims to teach a boy without a tutor "a short and eafy Method of Book-keeping," how to "spell, read and write true English, indite Epistles or Letters in a familiar stile," how to make out papers such as deeds, bonds, and wills, how to measure timber, and do other useful things.

Times

Facsimile of Washington's Schoolboy Handwriting.

Reduced one third

Blank-books are still preserved into which the boy Washington copied various legal forms, some poor poetry, and a list of one hundred and ten "Rules of Civility and Decent behavior in Company and Conversation." The handwriting is round, fair, and bold, the letters large like the hand that formed them, and the lines run straight and even. Sometimes he made ornamental letters with scroll work such as clerks were accustomed to use. The Rules of Civility were probably taken down from the lips of the teacher. They sound rather stiff

now, but it was a common thing then to set such precepts before children, and Washington very likely committed them to memory. They touch on things great and small, and in certain instances throw a rather curious light on the rude habits of the times. How strange, for example, is the admonition, "Kill no Vermin as Fleas, lice, ticks, etc., in the Sight of Others."

The Virginia schools long continued to have much the same desultory character they had in

One of the Log Schoolhouses still to be found in the South.

Washington's youth. A master who kept a plantation school in 1800 for a few months tells of one of his pupils who was a man thirty years of age. Another pupil persisted in coming with two huge

mastiffs at his heels, and the dogs would uncere-
moniously enter the schoolroom "bringing with
them myriads of fleas, wood-lice and ticks." Then
there were two sisters who rode on a single horse to
the schoolhouse door, followed by "a running foot-
man of the negro tribe with their food in a basket."
The building was of logs. It stood on blocks about
two and a half feet from the ground, and the space
underneath formed a convenient rendezvous for
hogs and poultry. The interior had neither ceiling
nor plastering. When it stormed, the rain was ex-
cluded by going outside and propping a square board
against the window opening with a broken rail—and
yet the farmers of the neighborhood referred to this
rude structure as "The Academy."

The first schoolhouses in the Middle colonies were
of logs almost exclusively. Such school buildings
were common in many sections for at least fifty
years after the Revolution, and among the moun-
tains they have lingered in use until quite recently.
The earlier ones had a rough puncheon floor, if they
had any floor at all. Often there was only the bare
earth which the children's feet soon rendered very
dusty. On occasion the youngsters would purposely
stir up this dust in clouds to annoy the teacher and
amuse their fellows. Sticks were inserted between
the logs around the sides of the room at a convenient
height, and boards were nailed on them to serve as
desks. Roofs were of bark, and at one end of the
building was a chimney of short logs laid up cob-
house fashion and daubed with clay. Many of the
school-houses, even to the borders of the nineteenth

century, had no glass in their windows. The paper that served instead was greased with lard to make it transparent and less easily affected by wet.

Inkstand, Sandbox, and Bunch of Uncut Quills.

The colonial schools had no blackboards and no maps, but once in a while a schoolroom in the more flourishing communities would possess a globe.

Slates did not come into general use until about 1820, and lead pencils not for a good many years after that. In filling the pages of their manuscript "sum-books" and "copy-books," the children were in the habit of using pen and ink exclusively. A favorite book of instructions of the period in its "Directions to Beginners in Writing" says that the necessary implements are

a pen-knife, quills, paper, good and free ink; likewise a flat Ruler for Surenefs; and a round one for Dispatch; with a leaden Plummot or Pencil to rule Lines: Also Gum Sandrich Powder with a little Cotton dipped therein, which rub gently over the Paper to make it bear Ink the better.

The pens were goose-quills, and one of the school-master's most essential accomplishments was the ability to make and mend these pens. Even if he was very expert in the art, the making and repairing for a large school consumed a good deal of time. Each family was its own ink manufacturer. The usual process was to dissolve ink-powder; but many of the country folk gathered the bark of swamp-maple, boiled it in an iron kettle to give it a more perfect black color, and when the decoction was thick added copperas. These home-made inks were often weak and pallid, and sometimes they dried up. Again they were spoiled with grease that got into the inkstands at the schoolhouse; for when there were evening meetings in the school building it came handy to use the inkstands as candlesticks.

The paper ordinarily bought for school purposes was rough and dark. Its cost, and the scarcity of

money, led the scholars to use it sparingly, and in the newer and poorer communities children frequently

A Homemade Copy Book with a Wall-paper Cover.

Size of original about 10×12 .

ciphered on birch bark. The paper came in foolscap size, unruled. For the copy and sum books each sheet was folded to make four leaves or eight pages. Then enough of these folds were slipped within each

other to form a book of the desired thickness. Lastly a cover of coarse brown wrapping-paper, or possibly of wall-paper, was cut out, and the whole was carefully sewed into shape. In preparation for writing, the children ruled the paper themselves with lead plummets. Some plummets were merely pieces of sheet lead, but oftener the lead was melted and run into a wooden mould and later smoothed with a jack-knife. The most popular shape was that of a tomahawk. When properly finished and sharpened and drilled with a hole at one end, the plummet was tied with a string of tow to the owner's ruler.

The handwriting of the colonial children, judging from the copy-books that have been preserved, was admirably legible and uniform — much better than that of the young people of the present. In fact, it was a chief requisite of the old schoolmasters that they should be good teachers of penmanship. The spelling mattered little, if only the "wrighting" was clear and fair; and as a logical result of this view a very large proportion of the early chirography is handsome and dignified, and easy to read.

Some particularly interesting glimpses of education in the score of years preceding the Revolution are to be found in the biography of John Trumbull, who attended one of the best schools of the period in the little town of Lebanon, Connecticut. For thirty years the master of the school was Nathan Tisdale, a man whose assiduity and fidelity became so widely known that he not only had pupils from the New England and Northern colonies, but from those of the remotest South and from the West India Islands.

Henry F. O'Connell

A Colonial Schoolmaster.

From Judd's Margaret.

It was the rule of the school to have no vacations, and because of this rule, or in spite of it, Trumbull, who became a pupil as a very small child, could read Greek at six years of age, and at twelve was sufficiently advanced to be admitted to college.

There is, perhaps, no better record of the appearance of a typical colonial schoolmaster than is to be found in Judd's *Margaret*: —

He wore a three-cornered hat. His coat descended in long, square skirts, quite to the calves of his legs. He had on nankeen small-clothes, white silk stockings, paste knee and shoe buckles. His waistcoat was of yellow embossed silk with long lappels. The sleeves and skirts of his coat were garnished with rows of silver buttons. He wore ruffle cuffs; on his neck was a snow-white linen stock. Under his hat appeared a gray wig falling in rolls over his shoulders. He had on a pair of turquoise-shell spectacles. A golden-headed cane was thrust under his arm.

I also wish to quote from the reminiscences of Alexander Graydon a graphic description of the methods of discipline adopted in the school he attended in Philadelphia, about 1765. His master, an Englishman by the name of Dove, was a humorist, and it was his practice to substitute humiliation for corporal punishment. His birch was rarely applied in the usual way,

but was generally stuck into the back part of the collar of the unfortunate culprit, who, with this badge of disgrace towering from his nape, was compelled to take his stand upon the top of the form for such a period of time as his offence was thought to deserve. He had another contriv-

ance for boys who were late in their morning attendance. This was to dispatch a committee of five or six scholars for them, with a bell and lighted lantern; and in this odd equipage, in broad daylight, the bell all the while tingling, were they escorted through the streets to school. As Dove affected a strict regard to justice in his dispensations of punishment, and always professed a willingness to have an equal measure of it meted out to himself in case of his transgressing, the boys took him at his word; and one morning, when he had overstaid his time, he found himself waited on in the usual form. He immediately admitted the justice of the procedure, and, putting himself behind the lantern and bell, marched with great solemnity to school, to the no small gratification of the boys and entertainment of the spectators.

Later, Graydon entered the Latin School presided over by a Scotchman of diminutive figure, named Beveridge. Of this master, Graydon says:—

He was diligent and laborious in his attention to his school; and had he possessed the faculty of making himself beloved by the scholars, and of exciting their emulation and exertion, nothing would have been wanting in him to an entire qualification for his office. Though not, perhaps, to be complained of as intolerably severe, he yet made a pretty free use of the rattan and the ferule, but to very little purpose. He was, in short, no disciplinarian, and consequently very unequal to the management of seventy or eighty boys. He was assisted by two ushers, who eased him in the burden of teaching, but who, in matters of discipline, seemed disinclined to interfere. I have seen them slyly slip out of the way when the principal was entering upon the job of capitally punishing a boy, who, from his size, would be likely to make resistance.

Various were the rogueries that were played upon him; but the most audacious of all was the following. At the hour of convening in the afternoon (that being the most convenient, from the circumstance of Mr. Beveridge being usually a little beyond the time) the bell having rung, the ushers being at their posts, and the scholars arranged in their classes, three or four of the conspirators conceal themselves without for the purpose of observing the motions of their victim. He arrives, enters the school, and is permitted to proceed until he is supposed to have nearly reached his chair at the upper end of the room, when instantly the door and every window-shutter is closed. Now, shrouded in utter darkness, the most hideous yells that can be conceived are sent forth from at least three score of throats; and Ovids and Virgils and Horaces, together with the more heavy metal of dictionaries, are hurled without remorse at the astonished preceptor, who, groping and crawling under cover of the forms, makes the best of his way to the door. When attained, and light restored, a death-like silence ensues. Every boy is at his lesson: no one has had a hand or a voice in the recent atrocity. What, then, is to be done? and who shall be chastised?

This outrage, from its succeeding beyond expectation, and being entirely to the taste of the school, had a run of several days, and was only put a stop to by the interference of the faculty.

The ferule was the standard implement for reforming the erring pupil, but some masters used a rattan or a cowhide. Even a cat-o'-nine-tails was not unknown. It was a time when young men were publicly whipped in colleges, and the severity of the treatment meted out to the pupils in the minor schools is not at all surprising. One New York

master had a short ladder beside his desk, and when he called forth a culprit for punishment, the boy had to step up on the ladder to receive his caning. It is related of a certain rustic schoolmaster that he kept a long birch rod with the butt-end resting on his chair, so that he could use it without rising. Another master would sit with his feet on the table and call up all the boys to march around the table in single file. As they passed in front of him he hit them each in turn with his ruler. In this way, though some of the innocent may have suffered, he made sure that none of the guilty escaped. But not all the discipline in the old schools was muscular. Instances are recorded of an offender's being ordered out to cut a small branch from a tree, and when he returned with it, the teacher squared and partially split the larger end and fitted the cleft on the culprit's nose. Pinched and ridiculous, the boy was forced to stand in full sight of the school until the teacher relented.

In the dame schools premiums of gingerbread were now and then bestowed for good behavior, but these were not a chief reliance in the cultivation of virtue. Most dames had great faith in a thimble tapped sharply on the delinquents' craniums. Whisperers were sometimes compelled to silence by having inserted in their mouths a short stick, like the bit of a bridle, with strings at the ends which could be tied at the back of the head. There were schools where transgressors were made to stand on the benches and wear dunce caps, or huge leather spectacles; or they might have pinned to their persons

large labels lettered, "Lying Ananias," or "Idle Boy," or whatever the teacher thought was appropriate to the case. Occasionally a child rebelled when punished and attempted revenge. Thus, in a Boston dame school, where the teacher had a habit of pinning naughty pupils to the cushion of her chair, one rogue, while fastened in this way, contrived to pin the dame's gown to the same article. When she rose she carried cushion and boy with her, to the great consternation of all concerned.

Books written especially for school use increased in number with the passing years; but almost without exception they were of English authorship, and most were of British printing.

A text-book with an individuality all its own was *The History of Genesis*, published in 1708. It was made up of short narratives retold from the first book of the Bible. To add to its attractiveness there were numerous illustrations. What the vol-

THE
HISTORY
OF
GENESIS.

BEING

An Account of the Holy Lives and Actions of the Patriarchs; explained with Pious and Edifying Explications, and illustrated with near Forty Figures.

Fitted for the Use of Schools, and recommended to Teachers of Children, as a Book very proper for the learning them to read English, and instructing them in the right understanding of these Divine Histories.

Part of the Title-page of an Early Religious School-book.

Reduced one-third.

ume aspired to do for youthful students can best be shown by an extract from the Preface.

This Book of Genefis (the antientest Writing now extant) is justly stiled the Epitome of all Divinity. It is indeed a great Bleffing of God, That Children in England

Noah's Ark, as depicted in *The History of Genesis*.

have liberty to read the holy Scriptures, when others abroad are denied it. And yet alas! how often do we see Parents prefer *Tom Thumb*, *Guy of Warwick*, or some such foolish Book, before the Book of Life! Let not your Children read these vain Books, profane Ballads, and filthy Songs. Throw away all fond and amorous Romances, and fabulous Histories of Giants, the bombast Atchievements of Knight Errantry, and the like; for these fill the Heads of Children with vain, filly and idle imaginations.

The Publisher, therefore, of this History of Genesis, being sensible how useful a Work of this Nature might be for Schools, hopes it will meet with a general Acceptance.

One of the earliest elementary books of the century was entitled *The Child's Weeks-work*. It was a compilation of lessons for each day of four weeks. Among other things there were proverbs, fables, a section devoted to "Behavior," and "A Short Catechism fitted for the Use of Children after they have said their Prayers." But the oddest feature here and there of conundrums and anecdotes. Several of the former and one of the latter follow:—

Quest. What's that which is higher fitting than standing?

Ans. It is a Dog.

Reduced one-third.

Quest. A long Tail, a Tongue and a Mouth
Full fifty feet above the Ground,
'Tis heard both *East, West, North and South,*
A mile or two all round.

Answ. It is a Bell in a Steeple.

A Tree of Knowledge Frontispiece.
From *The London Spelling-Book*. 1710.

Quest. I never
Spoke but once.

Answ. It is Ba-
laam's *Afs.*

A Countryman being prest for a Soldier, was engaged in a Fight, and at his return was ask'd; what Manly Acts he had done, he answer'd he had cut off one of the Enemy's legs. Oh! said the other, you had done much more like a stout Man, if you had cut off his Head: Oh! said he, that was off before.

Somewhat allied to the two books just described, in their distinctly reli-

gious character, was "*The Protestant Tutor, instructing Youth and Others, in the compleat method of Spelling, Reading, and Writing, True English: Also discovering to them the Notorious Errors, Damnable Doctrines, and cruel Massacres of the bloody Papists, which England may expect from a Popish Successor: Printed by and for Tho. Norris, and sold at the Looking-glass on London-Bridge.*" The title-page from which this is

An Illustrated Alphabet in *The London Spelling-Book*.

taken is dated 1715, but there were earlier editions, and the book apparently enjoyed a considerable circulation. The lessons included the alphabet, a few

pages of spelling words and easy reading lessons, but mostly were made up of rabid anti-Catholic matter illustrated with dreadful pictures of persecutions and of heaven, hell, death, and the judgment.

A bird in the hand is worth two in the bush.

FABLE XII. *Of the Fisherman and the Fish.*

The Fisherman with "a bird in the hand."

From Dilworth's *A New Guide to the English Tongue*.

Only infrequent copies of the text-books I have mentioned wandered to our shores; nor were any school-books imported in quantity until the publication of Dilworth's *A New Guide to the English Tongue*, in 1740. This was the most popular speller of the eighteenth century. A portrait of Dilworth with a scholastic cap on his head and a pen in his hand served for a frontispiece; and, in truth, as the

He that will not help himself, shall have help from nobody.

TABLE I. Of the Waggoner and Hercules.

AS a waggoner was driving his team, his waggon funk into a hole, and stuck fast.

The poor man immediately fell upon his knees, and prayed to Hercules, that he would get his waggon out of the hole again.

Thou fool, says Hercules, whip thy horses, and set thy shoulder to the wheels; and then if thou wilt call upon Hercules he will help thee.

The Interpretation.

Lazy wishes never do a Man any service; but if he would have help from God in time of need, let him not only implore his assistance, but make use of his own best endeavours.

Evil be to him that evil think. Also, give a crust to a surly dog, and he will bite you.

TABLE X. *Of the good natured Man and the Adder.*

A Good natured man being obliged to go out in frosty weather, on his return home found an adder almost frozen to death, which he brought home with him and laid before the fire.

As soon as the creature had received fresh life by the warmth, and was come to herself, she began to hiss, and fly about the house, and at length killed one of the children.

Well, said the man, if this is the best return that you can make for my kind offices, you shall even share the same fate yourself; and so killed her immediately.

The Interpretation.

Ingratitude is one of the blackest crimes that a man can be guilty of: It is hateful to God and man, and frequently brings upon such a graceless wretch all that mischief which he either did or thought to do to another.

From Dilworth's *A New Guide to the English Tongue*.

greatest school-book author of his time he was not unworthy of the honor. The spelling words were interspersed with much religious reading and dismal moralizing, but as an offset to this matter there was "A Select Number of Fables, adorned with proper Sculptures."

Two of the fable pages are reproduced entire. The other illustration, delineating the fisherman, is accompanied by the following story: —

A Fisherman having cast his line into the water presently drew up a Fish.

The little captive intreated the fisherman that he would spare her (she being but small) till she was grown larger; and then she would suffer herself to be taken by him again.

No, no, replied the fisherman, I am not to be so served. If I let you go, I must never see you any more: I was always of that temper that whatever I could catch I had rather take it away than leave it behind me.

The Interpretation.

Never let go a certainty for an uncertainty.

The only speller to seriously rival Dilworth's in circulation during the remainder of the colonial period was Fenning's, which appeared in 1755. Besides "Tables of Words," this contained "Lessons both moral and divine, Fables and pleasant Stories, and a very easy and approved Guide to English Grammar." There was also some minor material including a chronology of "the most remarkable Occurrences in Sacred and profane History," that had in it items like: —

THE Creation of the World	B.C. 4047
Noah's Flood	2350
Walls of Jericho fell down	1454
Eleven Days successive Snow	A.D. 1674
A very great Comet	1680
A terrible high Wind, November 26	1703
The surprising Meteor and Signs in the Air	1719

Here is one of the "Fables" :—

The Town in Danger.

From Fenning's *The Universal Spelling-Book*,

THERE was a Town in Danger of being besieged, and it was consulted which was the best Way to fortify and strengthen it; and many were the different Opinions of the Town Folks concerning it.

A grave skilful Mafon faid, there was nothing fo strong

Frontispiece to Fenning's *The Universal Spelling-Book*.

nor so good as *Stone*. A Carpenter said, that *Stone* might do pretty well; but, in his Opinion, good strong *Oak* was much better.

A currier being present, said, Gentlemen, you may do as you please; but to have the Town well fortified and secure, take my Word, there is nothing like *Leather*.

MORAL.

'Tis too common for Men to consult their own private Ends, though a whole Nation suffer by it.

Then here is one of the “pleasant Stories”:—

THERE were several Boys that used to go into the Water, instead of being at school; and they sometimes staid so long that they used to frighten their Parents very much; and though they were told of it Time after Time, yet they would frequently go to wash themselves. One Day four of them, *Smith*, *Brown*, *Jones* and *Robinson*, took it into their Heads to play Truant, and go into the Water. They had not been in long before *Smith* was drowned: *Brown's* Father followed him, and lashed him heartily while he was naked; and *Jones* and *Robinson* ran Home half dressed, which plainly told where they had been. However, they were both sent to Bed without any Supper, and told very plainly, that they should be well corrected at School next Day.

By this time the News of *Smith's* being drowned, had reached their Master's Ear, and he came to know the Truth of it and found *Smith's* Father and Mother in Tears, for the Loss of him; to whom he gave very good Advice, took his friendly Leave, and went to see what was become of *Brown*, *Jones* and *Robinson*, who all hung down their Heads upon seeing their Master; but more so, when

their Parents desired that he would correct them the next Day, which he promised he would; though, says he, (by the bye) it is rather your Duty to do it than mine, for I cannot answer for Things done out of the School.

Do you, therefore, take Care to keep your Children in Order at Home, and depend on it, says the Master, I will keep them in Awe of me at School. But, says he, as they

The Truant Boys.

From Fenning's *The Universal Spelling-Book*.

have been naughty disobedient Boys, and might indeed have lost their Lives, I will certainly chastise them.

Next Day, *Brown*, *Jones* and *Robinson* were sent to School, and in a short time were called up to their Master; and he first began with *Brown*. — Pray, young Gentleman, says he, what is the Reason you go into the Water without the Consent of your Parents? — I won't do so any more, says *Brown*. — That is nothing at all, says the Master, I cannot trust you. Pray can you swim? — No, Sir, says *Brown*. — Not swim, do you say! Why you might have been

drowned as well as *Smith*. — Take him up says the Master. — So he was taken up and well whipt.

Well, says he to *Jones*, can you swim? — A little, Sir, said he. — A little! why you were in more danger than *Brown*, and might have been drowned had you ventured much farther. — Take him up, says he.

Now *Robinson* could swim very well, and thought as *Brown* and *Jones* were whipt because they could not swim, that he would escape. — Well, *Robinson*, says the Master, can you swim? — Yes, Sir, says he, (very boldly) any where over the River. — Pray, Sir, says his Master, what Business had you in the Water, when you should have been at School? — Take him up, says he; so they were all severely corrected for their Disobedience and Folly.

Virtuous Tommy gives Naughty Harry some Good Advice.

From Fenning's *The Universal Spelling-Book*,

The next story is a most vivid contrast of good and evil as personified by virtuous Tommy and

Frontispiece to *The British Instructor*;

"Being a Plain and Easy Guide to the English Language on a Plan Entirely New."
London, 1763.

naughty Harry. The latter was "A sullen perverse Boy from his Cradle," while Tommy was "good-

natured, pleafant and mannerly." Hence Tommy becomes a great and rich man while Harry sinks to poverty and wretchedness and crime. Finally,

Selections from a series of Alphabet Illustrations in *The British Instructor*.

to escape arrest, Harry took flight by sea; but "Divine Vengeance" followed him, the ship was wrecked, and though he was cast up on the shore he soon afterward "became a Prey to wild Beasts, which God suffered to tear him in Pieces, as the just Reward of his Disobedience and mispent Life."

In the miscellany of the latter part of the book are directions for making both black and red ink. The red ink recipe is:—

TAKE Half a Pint of Water, and put therein Half an Ounce of Gum Senega; let this dissolve in a Gallipot, and then add one Pennyworth of the best Vermilion, stirring it well for two Days.

That stirring for two days makes it sound like a weary process. In some books the ink recipes were supplemented by a paragraph like this:—

IN hard frosty weather, Ink will be apt to freeze; which if it once doth, it will be good for nothing; it takes away all its Blackness and Beauty. To prevent which put a few Drops of Brandy into it, and it will not freeze. And to hinder its moulding put a little salt therein.

One of the handsomest spellers of colonial days was "WATTS's Compleat SPELLING-BOOK." Its contents included, besides the ordinary spelling-book matter, "Praxes on Words of different Syllables; Portions of Scripture; a Short History of England; and Directions for writing the Round Hand, and Round Text, and the *Italian Hand*." In connection with the writing directions there are two or three pages of sentences designed for copies. I quote from these several maxims in a list of "Moral Instructions, beginning with every Letter of the Alphabet."

Grow quiet and easy, when Fools strive to tieze ye.
Remember the Liar, has his Part in Hell-fire.
X Excuse but with Truth, the Follies of Youth.

Concerning the last a foot-note says:—

The Letter X begins no English Word so that we might begin that line with EX, unless the Reader will choose this instead of it, viz.

X is such a cross Letter, balks my Morals and Metre.

The quotations which follow are portions of lessons in a book that was made up from a number

GEORGE III. by the Grace of
G O D, of GREAT-BRITAIN,
FRANCE and IRELAND, King,
Defender of the Faith.

In ev'ry Stroke, in ev'ry Line,
Does some exalted Virtue shine ;
And *Albion's* Happiness we trace,
In every Feature of his Face.

Frontispiece to *Watts's Compleat Spelling-Book*, 1770.

of English spellers and published in Boston in 1770 under the title, *The Youth's Instructor in the English Tongue, Or the Art of Spelling Improved*. It claimed to be "a more plain easy and regular Method of teaching young children than any other Book of this kind and Bignefs extant."

The Description of a good Boy.

THE boy that is good
Does mind his book well;
And if he can't read
Will strive for to spell.

His school he does love;
And when he is there,
For plays and for toys,
No time can he spare.

Of taking God's Name in vain.

TO mention God, no man has just pretence,
But to his honour, or the truth's defence.
In common talk, where trifles most abound,
God, Christ or Lord strikes horror with the sound.
Nor should we dare appeal to him on high,
To gain belief, or to attest a lie,
Thus to abuse that name, if man presume,
The third Commandment loudly speaks their doom.
Yet some, alas! in every trivial cause,
To stop a gap in speech, or for a pause;
Or to fill up the sentence, at each word,
From mouths unhallow'd, breathe, Christ, God or Lord.
Good Lord, if e'er such monsters I come nigh,
From their ill ways give me the grace to fly.

The Inside of the First Leaf of *A New Battledoor*.

Reduced one-third.

Against Songs or Ballads.

HATE vulgar impious songs, a wretched chime,
Where fullsome nonsense jingles into rhyme.

An American Reprint of *A New Battledoor*.

Size of original, $4 \times 6\frac{1}{2}$ inches.

Of Man.

Lord what is man! a dunghill blanched with snow, or a
May game of fortune, a mark for malice, a butt for envy;
He is born crying, lives laughing and dies groaning!

For acquiring the elements of education the hornbook still held its humble place among the school publications. Another help somewhat related to the hornbook was the "battledore" — a folded card of two or three leaves with a little flap like an old-time pocket-book. The battledores were essentially little illustrated primers; the price was from a

A Heading from a Manuscript Arithmetic of Colonial Days.

Reduced one-half.

penny to fourpence, and they found ready sale. One English publisher in ten years sold upwards of a hundred thousand, and many other firms were issuing them at the same time. They are said first to have been put on the market in 1746. The earlier ones were covered outside with Dutch gilt embossed paper, and the inner, printed side was varnished. Later the varnish and the fancy outer pasting of gilt paper were omitted and the entire folder, outside and in, was printed. Battledores were

comparatively little used in this country after the Revolution, but in England they were common for fifty years longer.

The colonial teachers usually taught arithmetic

A person hath 2 Lots of Sugar Worth 12 p^{cs} 16 of 10 p^{cs} 16 of 6 p^{cs} & of 4 p^{cs} 16
 & he would have a Composition worth 48 p^{cs} 16 the Schoolmaster by which of should
 Contain 144 lb more of these 2 Lots I demand how much of each he must take

First Method

$$\begin{array}{r|l}
 \begin{array}{l} 12 \\ 10 \\ 6 \\ 4 \end{array} & \begin{array}{l} 1 \\ 2 \\ 2 \\ 1 \end{array} \\
 \hline
 12 &
 \end{array}$$

Second Method

$$\begin{array}{r|l}
 \begin{array}{l} 12 \\ 10 \\ 6 \\ 4 \end{array} & \begin{array}{l} 1 \\ 2 \\ 2 \\ 1 \end{array} \\
 \hline
 12 &
 \end{array}$$

Third Method

$$\begin{array}{r|l}
 \begin{array}{l} 12 \\ 10 \\ 6 \\ 4 \end{array} & \begin{array}{l} 2.4 \\ 2.4 \\ 4.2 \\ 4.2 \end{array} \\
 \hline
 24 &
 \end{array}$$

Fourth Method

$$\begin{array}{r}
 12: 2 :: 144 \\
 \hline
 24
 \end{array}$$

Fifth Method

$$\begin{array}{r}
 12: 2 :: 144 \\
 \hline
 24
 \end{array}$$

Sixth Method

$$\begin{array}{r}
 12: 2 :: 144 \\
 \hline
 24
 \end{array}$$

Seventh Method

$$\begin{array}{r}
 12: 2 :: 144 \\
 \hline
 24
 \end{array}$$

Eighth Method

$$\begin{array}{r}
 12: 2 :: 144 \\
 \hline
 24
 \end{array}$$

Ninth Method

$$\begin{array}{r}
 12: 2 :: 144 \\
 \hline
 24
 \end{array}$$

Tenth Method

$$\begin{array}{r}
 12: 2 :: 144 \\
 \hline
 24
 \end{array}$$

Eleventh Method

$$\begin{array}{r}
 12: 2 :: 144 \\
 \hline
 24
 \end{array}$$

Twelfth Method

$$\begin{array}{r}
 12: 2 :: 144 \\
 \hline
 24
 \end{array}$$

Thirteenth Method

$$\begin{array}{r}
 12: 2 :: 144 \\
 \hline
 24
 \end{array}$$

Fourteenth Method

$$\begin{array}{r}
 12: 2 :: 144 \\
 \hline
 24
 \end{array}$$

Fifteenth Method

$$\begin{array}{r}
 12: 2 :: 144 \\
 \hline
 24
 \end{array}$$

Sixteenth Method

$$\begin{array}{r}
 12: 2 :: 144 \\
 \hline
 24
 \end{array}$$

Seventeenth Method

$$\begin{array}{r}
 12: 2 :: 144 \\
 \hline
 24
 \end{array}$$

Eighteenth Method

$$\begin{array}{r}
 12: 2 :: 144 \\
 \hline
 24
 \end{array}$$

Nineteenth Method

$$\begin{array}{r}
 12: 2 :: 144 \\
 \hline
 24
 \end{array}$$

Twentieth Method

$$\begin{array}{r}
 12: 2 :: 144 \\
 \hline
 24
 \end{array}$$

So I conclude that according to the First Method that
 48 lb at 12 p^{cs} 16 and 24 lb at 10 & 24 lb at 6 & 48 lb at 4 p^{cs} 16
 will Make a Composition of Sugar Containing 144 lb worth 48 p^{cs} 16
 But by 2^d Method of answer is 24 lb at 12 & 48 lb at 10 & 48 lb at 6 & 24 lb at 4
 & by 3^d Method 36 lb of each Lot of Sugar

Reduced one-third.

average pupil. One of the earliest to attain favor was *Cocker's Arithmetic*: "Being a Plain and familiar Method, fuitable to the meanest Capacity, for the understanding of that incomparable Art." It was first printed in 1677. Later came *Hodder's*, and in 1743 *The Schoolmaster's Assistant* by Thomas Dilworth. Dilworth's book was still in use to some extent at the beginning of the last cen-

tury. One can judge from the fact that it makes no allusion to decimal currency it could not by then have been very well adapted to American requirements.

Among the books concerned with the dead languages, Bailey's *English and Latin Exercises for School-Boys* was very popular. It was made up sandwich fashion from cover to cover of alternating paragraphs of English and Latin, one a translation of the other. Some of the material would hardly find place in a school-book of to-day, as, for instance : —

Joan is a nafty Girl.

Ugly Witches are said to have been black Cats.

The Report of the great Portion of an unmarried Virgin is oftentimes the Sound of a great Lye.

Greedy Gluttons buy many dainty Bits for their ungodly Guts.

Children drink Brimstone and Milk for the Itch.

If we should compare the Number of good and virtuous Persons to the Multitude of the Wicked, it would be but very small.

Toward the close of the book are several of those excessively polite conversations between Master and Scholar such as were frequently inserted in the early school-books. From Dialogue III in this Latin book I take enough to show the manner of them.

Scholar. Sir, I entreat, that you would be pleas'd to grant me my request.

Master. If my grant may profit thee, I will not deny ; if thou ask those things, that tend to thine own Hurt, I must refuse.

Scholar. I only beg, Sir, that you would repeat to me those Instructions that you gave to our Form Yesterday.

Thus they go on through a number of pages, and at the conclusion the Scholar says, "I thank you, honored Sir."

4. Of ZAARA, or the DESART.

Tyro. How is this *Desart* situate?

Philo. *Zaara* is bounded on the N. by *Bildulgerid*, on the E. by *Egypt* and *Nubia*, on the S. by *Negro-Land*, and on the W. by the *Atlantic Ocean*.

Portion of Page from Fenning's *A New and Easy Guide to the Use of the Globes*, 1760.

The ordinary binding of all these colonial school-books was full leather, even when the books were small and thin. Illustrations were used sparingly, and the drawing and engraving were very crude. The volumes of English manufacture were as a rule well printed on good paper; but the American editions were quite inferior, and they continued to make a poor appearance as compared with the trans-Atlantic books until after the middle of the nineteenth century. The most marked typographical contrasts to the present that one observes is the use of the long *s*, that looks like an *f*, and the habit of printing beneath the final line of each page the first word of the page following. The catchwords and long *s* were employed up to 1800, but within the first decade of the new century they were entirely abandoned.

III

THE NEW ENGLAND PRIMER

ORIGINALLY a "primer" was a book of private devotions. The earliest books thus named contained devotions for the hours, the Creed, the Lord's Prayer, the Ten Commandments, a few psalms, and some simple instruction in Christian knowledge. They date back almost to the time when type-printing was invented. Before that time the only way of producing books had been by laboriously copying them with brush or pen, letter by letter. Learning, and even knowledge how to read, were confined to the very few. But type-printing reduced the cost of books so materially that they were possible in the homes of the people, and it at once became desirable that the rudiments of language should be put within reach of the many who now wished to learn to read. In consequence an alphabet was often included in the little devotional primers, and this led presently to giving the name "primer" to all elementary books for the use of children.

The contents of the old-time primers changed, but for hundreds of years the teaching of religion and reading continued united in them. No other way could have been devised to mould the religious

thought of the people so effectively. The need of guiding public sentiment on this subject was plainly apparent; for those who studied the Bible did not understand its teachings alike, and printing no sooner gave the Scriptures a wide distribution than divergent opinions multiplied. The Bible itself does not contain a distinct creed, nor does it tell us what to think about it — hence the importance of setting forth the simple tenets of religion in a form for general distribution. The primers were an especially valuable medium, because they went to the fountain head. Their precepts were instilled in minds as yet unformed, and the children were drilled to believe what they were to think out for themselves when they were more mature.

One trouble, however, was that primers from different sources did not present the truth alike, and successive rulers from Henry VIII down tried to control their teachings. The unauthorized books were seized and burned, and preachers and printers guilty of preparing and distributing them were whipped, imprisoned, and put to death. But their production could not be stifled, and after the reign of James II, the people were allowed to have such primers and catechisms as they chose.

No doubt the early settlers of New England possessed primers that they brought across the ocean with them. The family Bible and primer occupied the same shelf in the pioneer homes, and from the primer the children were faithfully catechised every Sabbath day. The exact date of the first issue of the "New England" primer is not known, but

below is the earliest mention that has been discovered of a primer with that name. It is from a Boston "Almanack for the year of the Christian Empire, 1691."

ADVERTISEMENT.

There is now in the Press, and will suddenly be extant, a Second Impression of *The New-England Primer enlarged*, to which is added, more *Directions for Spelling*: the *Prayer of K. Edward the 6th.* and *Verses made by Mr. Rogers the Martyr, left as a Legacy to his Children.*

Sold by *Benjamin Harris*, at the *London Coffee-House in Boston.*

The Earliest Mention known of *The New England Primer.*

From Newman's *News from the Stars* Boston, 1690.

This Harris had formerly been a printer in London where he brought out many tracts and broadsides of a religious or political character. He was a man of considerable enterprise and ingenuity and wrote both in verse and prose much of what he printed. In 1681 a "Protestant Petition" he put forth got him into trouble with the government, which at that time was inclined toward Catholicism, and he was fined five hundred pounds and condemned to stand in the pillory. This apparently ruined his business, and we hear no more of him till 1686, when he arrived in Boston and became the proprietor of a book and coffee shop. Soon he was publishing pamphlets and circulars, and among

other ventures he started a newspaper under the title of *Public Occurrences*, which was the first newspaper printed in America.

The general plan of the primer sent forth by Harris was old, but the compilation had new features, and its name lent it an aspect of originality. In New England and the neighboring colonies it promptly became an institution. Every home possessed copies, and they were for sale at all the town and village bookshops. Occasionally printers changed the title, and called it *The New York Primer*, or *The American Primer*, or *The Columbian Primer*; but the public preferred the New England title. For a hundred years this book beyond any other was the school-book of American dissenters. Its power waned rapidly later. The cities abandoned it first, and gradually it was neglected in the villages. Still, even in Boston, it was used in the dame schools as late as 1806. Its total sales are estimated to have been not less than three million copies. Astonishingly few of these have been preserved, and early editions are among the rarest of school-books. All issued previous to 1700 have vanished, and only a few score have survived of those that were published during the next century when it was in the zenith of its popularity. The oldest perfect copy known is one printed in Boston in 1735. This was picked up by a Pennsylvania teacher at a farm-house auction in 1893 for twelve cents. Ten years later he sold it to a New York dealer for \$2500.

The newspapers heralded this sale throughout the

country, arousing much interest in the old primers, and giving to the average owner a fabulous idea of

A Characteristic Binding.

Showing the oak sides, with portions of the blue paper which was pasted over the wood still adhering.

the value of his possession. As a matter of fact the chances are that five to twenty dollars is as much

Children, like tender ozers, take the bow,
And as they first are fashioned always
grow.

For what we learn in youth, to that
alone,
In age we are by second nature prone.

of 1828.

Published by the firm which later became famous
as the publishers of *Webster's Dictionary*.

as could be realized even for copies antedating 1800. Anything more recent is seldom worth over a dollar or two.

The covers of the New England primers were usually of thin oak, that cracked and splintered badly with use, in spite of the coarse blue paper which was pasted over the wood. The back was of leather. Neither back nor sides had any printing on them. Most editions of the primer contained a frontispiece. For this a rudely engraved portrait of the reigning English monarch

was customary until the Revolution, when one or another of the American patriots had the honor. After the war Washington was the favorite frontispiece character. Sometimes a school scene was substituted, as in the cut reproduced from the Brookfield edition. This same picture is to be

found in a Boston book of 1791, but the verse underneath it was —

The *School-Mam*, see, whose only care,
Is to instruct her tender youth,
How they may vice's ways beware,
And tread the steps of peace and truth.

A Title-page.

Every primer had a page devoted to the alphabet, followed by two pages of those curious word fragments, "ab, eb, ib, ob, ub," etc., which the book itself calls "Easy syllables for Children." Then came three pages of words grading up from those of

Easy syllables for Children.

Ba	be	bi	bo	bu
ca	ce	ci	co	cu
da	de	di	do	du
fa	fe	fi	fo	fu
ga	ge	gi	go	gu
ha	he	hi	ho	hu
ja	je	ji	jo	ju
ka	ke	ki	ko	ku
la	le	li	lo	lu
ma	me	mi	mo	mu
na	ne	ni	no	nu
pa	pe	pi	po	pu
ra	re	ri	ro	ru
sa	se	si	so	su
ta	te	ti	to	tu
va	ve	vi	vo	vu
wa	we	wi	wo	wu
ya	ye	yi	yo	yu
za	ze	zi	zo	zu

one syllable to "a-b-o-mi-na-ti-on" and a few others of six syllables. The rest of the book is almost entirely a religious and moral miscellany of verse and prose gathered from all sorts of sources. Prominent in this miscellany is a picture alphabet—a series of twenty-four tiny pictures, each accompanied by a two or three line jingle. Apparently two of the letters are slighted, but not really—for it was customary to teach

that *J* was simply *I* with another name, and that *U* and *V* were likewise identical. One must grant that the pictures are expressive in spite of their diminutive size. The artist took care to get everything he could into them that would help the text.

In the first series reproduced, notice the apple tree in the garden of Eden. It is all there, and you can plainly see the apples among the leaves. The tree that Zaccheus did climb is also shown practically entire; and how effectively Noah's Ark is brought out sailing on the flooded world while in the background the forked lightning plays in the black clouds. Then there are Felix and Paul with the judgment as distinct before them as if it was in the same room; and opposite the letter *T*, how horrid sin is made to appear! — no wonder that young Timothy flies!

This rhyming method of teaching the alphabet is much older than *The New England Primer*, but the little book gave the old idea fresh expression. The primer rhymes are thought to have originated with the Boston printer Harris, as the poetry he was in the habit of manufacturing had much the same character. They were always being changed, however, sometimes merely in wording, sometimes in subject, and the only one of the twenty-four that remained unaltered was —

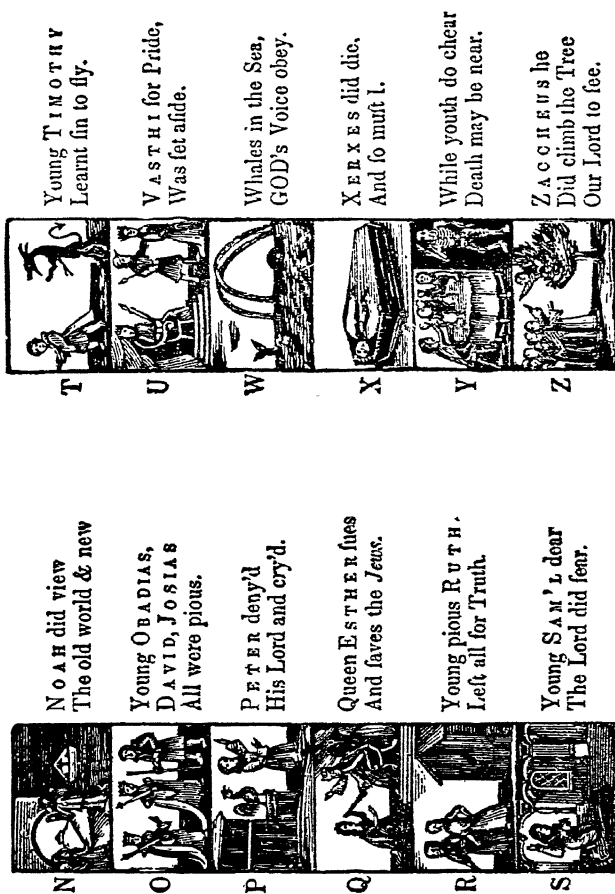

In Adam's Fall
We finned all.

That seemed to find general acceptance as a desirable fact to promulgate in exactly those words. The new features in the jingles were in part casual changes made by the printers, and in part were a result of the feeling that many of the rhymes earlier adopted were too earthy in their sentiment.

The Cat doth play,
And after flay,

Picture Alphabet of Religious Jingles.

Picture Alphabet of Religious Jingles.

And so must you
and I.

Youth forward slips,
Death soonest nips.

Zaccheus, he
Did climb the Tree,
His Lord to see.

An Alphabet including both Religious and Secular Jingles.

From a primer printed in Boston about 1800.

and the similar couplets, were gradually rewritten and given religious significance.

Another curious change found in some of the primers was connected with the *K* rhyme. At first this read : —

King Charles the Good
No Man of blood.

But by the time of the Revolution praise of royalty was not as acceptable as it had been, and rhymes like the following were substituted : —

Kings should be good
No men of blood.

Britain's King in spleen
Lost States thirteen.

Queens and Kings
Are Gaudy Things.

In addition to the picture alphabet there was an unillustrated one of "Lessons for Youth." Three of the short precepts will suffice to show what stern stuff was put into these lessons : —

FOOLISHNESS is bound up in the Heart of a Child, but the Rod of correction shall drive it from him.

LIARS shall have their Part in the Lake which burns with Fire and Brimstone.

UPON the Wicked God shall rain an Horrible Tempest.

The letter *X* presented difficulties that were gotten around in this way:—

XHORT one another daily, while it is called To Day, lest any of you be hardened thro' the Deceitfulness of Sin.

The feature of the primer that perhaps aroused most interest was an illustration depicting Mr. John

Rogers burning at the stake, with his wife and ten children looking on. Every youthful primer owner counted those children to make sure the statement of the text as to their number was correct. Of course the readers never suspected that the scene in the engraving was at all fictitious—yet history only records of Rogers's wife and children that they "met him

MR. JOHN ROGERS, minister of the gospel in *London*, was the first martyr in Queen MARY's reign, and was burnt at *Smithfield*, *February 14, 1554*.—His wife with nine small children, and one at her breast following him to the stake; with which sorrowful sight he was not in the least daunted, but with wonderful patience died courageously for the gospel of **JESUS CHRIST**.

The Rogers Page.

From the Webster edition of 1843.

by the way as he went toward Smithfield," his place of martyrdom. In connection with this tragic picture is printed a long poem of practical and spiritual exhortation that purports to be of Rogers's authorship.

Some few Days before his Death he writ the following Advice to his Children,

says the heading, but in truth the composition was

A Rude Primer Cut purporting to show John Rogers being burned at the Stake.

An officer stands on the right, and Mr. Rogers's wife and ten children on the left.

the work of another martyr who met his death a year later than Rogers. The poem attained considerable popularity among the Puritans before it was included in the primer.

Another long poem to be found in most primers was *A Dialogue between Christ, Youth, and the Devil*. It starts

with a declaration on the part of the Youth that—

Those days which God to me doth fend,
In pleasure I'm resolved to spend.

The devil applauds, remarking among other things that—

If thou my counsel wilt embrace,
And shun the ways of truth and grace,
And learn to lie, and curse and swear,
And be as proud as any are;
And with thy brothers wilt fall out,
And fister with vile language flout;
Yea, fight and scratch, and also bite,
Then in thee I will take delight.

Christ pleads with Youth to leave his folly, until at length Youth wavers; but he cannot make up his mind to yield. He is promising to reform at some time in the future, when to his surprise and dismay Death appears and says:—

Youth, I am come to fetch thy breath,
And carry thee to th' shades of death,
No pity on thee can I show
Thou hast thy God offended so.
Thy soul and body I'll divide,
Thy body in the grave I'll hide,
And thy dear soul in hell must lie
With Devils to eternity.

In minor matters the primers varied greatly, but you could usually depend on finding the Apostle's Creed, Dr. Watts's *Cradle Hymn*, and several prayers, including the Lord's Prayer and *Now I lay me down to sleep*; and there was a page of "Instructive *Questions and Answers*," beginning with "Who was the first man?—*Adam*," and continuing in the same tenor with such items as—

The BUTTERFLY.

The *Butterfly* in gawdy Dress,
The worthless Coxcomb doth express.

The CROCODILE.

The *Crocodile* with wat'ry Eyes,
O'er Man and every Creature cries.

The Butterfly and Crocodile.

From an edition of about 1785.

Who was the oldest Man?
Who was the patientest Man?
Who was the meekest Man?
Who was the hard heartedest Man?
Who made iron swim?
Who was in the Whale's Belly?

Methuselah.
Job.
Moses.
Pharaoh.
Elisha.
Jonah.

A primer published by E. Draper about 1785 has five pages of natural history, consisting of two pictures to the page with a couplet below each like:—

The Afs, tho' mean, will by his Bray,
Oblige your Horfe to run away.

The Nightingale and Cuckow.
From an edition of about 1785.

The COCK.

THE *Cock* doth crow to let you know,
If you be wise, what Time to rise.

There is no Bird treat-ed with so much Cruel-ty as the *Cock* ; for he, poor Thing (with-out the least Of-fence) is ti-ed to a Stake, and thrown at by a set of i-dle, wick-ed, bar-ba-rous Fel-lows, until he is beat in Pie-ces. This is a Cus-tom the very Hea-thens would blush at ; and there-fore I hope you, who are a Christ-ian, will nev-er be guilt-y of any Thing so in-hu-man.

One of Several Similar Pages of Illustrated Rhymes and Comments in
The Royal Primer, Worcester, Mass., 1787.

In an edition of 1771 we find what at first sight promises to be an entertaining story, but it proves only a description of one of the priggish little good boys that abound in the juvenile literature of the period.

THE HISTORY OF MASTER TOMMY FIDO.

AS Goodness and Learning make the Child a Man, so Piety makes him an Angel. Master *Tommy Fido* not only loved his Book because it made him wiser, but because it made him better too. He loved every Body, and

could not see a Stranger hurt, without feeling what he suffered, without pitying him, and wishing he could help him. He loved his Papa and Mamma, his Brothers and Sisters with the dearest Affection; he learnt his Duty to God, thanked him for his Goodness, and was glad that he had not made him a Horse or a Cow, but had given him Sense enough to know his Duty, and every Day when he said his Prayers, thanked God for making him a little Man. One Day he went to Church, he minded what the Parson said, and when he came home asked his Papa, if God loved him; his Papa said Yes, my Dear. O! my dear Papa, said he, I am glad to hear it; what a charming Thing it is to have God my Friend! then nothing can hurt me; I am sure I will love him as well as ever I can. Thus he every day grew wiser and better. Every Body was pleased with him, he had many Friends, the Poor blessed him, and every one strove to make him happy.

A Philadelphia edition of 1797 “much improved” indulged in some similar fiction that took the form of eighteen little reading lessons, one of which was the following:—

Har-ry! says Bil-ly, what do you think the world stands on? I don't know, says Har-ry; but I can tell you what our Tom says: Old Tom says the world stands on a great tur-tle; but he could not tell me what the tur-tle stood on. Well, says Bil-ly, I will tell you what my pa-pa says; My pa-pa says the world don't stand on a-ny thing; but is ba-lanc-ed on its own cen-tre, and goes round the sun, in the o-pen space, once e-ve-ry year.

Another story is this from *The Royal Primer*, Worcester, Massachusetts, 1787:—

The Rewards of VIRTUE.

Miss *Goodchild* had the advantage of such Instructions in her youth that she could reason justly on the Being, Providence and Perfections of

The Rewards of Virtue.

God; whom she admired, loved, and revered, from a Conviction of his infinite Excellence; and to whom every Morning and Night, she offered up her Prayers for Protection, and for Advancement in useful Knowledge, and good Dispositions, the chief object of her Pursuit!

Her Papa and Mamma soon died; and she had no other Portion left her but her undissembled Piety, a decent Modesty, which showed itself in her Actions, an innocent Simplicity and a Heart full of Goodness. These raised her Friends; they admired her, they loved her, they strove to make her happy. A Gentleman of Understanding and Virtue became sensible of her Merit, and married her. It was the Business of their Lives to make each other happy, and as their Fortune was large she was enabled to gratify the generous Dispositions of her Heart, in relieving any distressed honest Man; and in promoting the substantial Benefit of all about her.

Illustration to "The Husbandman's Prayer" in a New England Primer of about 1785.

Here are a few morsels showing the kind of material that was used in the primers to fill space between the more important portions : —

Good children must

Fear God all day,
Parents obey,
No false thing say,
By no sin stray,

Love Christ alway,
In secret pray,
Mind little play,
Make no delay

In doing good.

F A I T H.

THE Father of the Faithful said,
At God's first calling, "Here am I ;"
Let us by his example sway'd,
Like him submit, like him reply.

Then let us imitate the Seer,
And tender with compliant grace
Ourselves, our souls, and children here,
Hereafter in a better place.

Poem from a Charlestown, Mass., Edition of 1802.

He that loves God, his school, and his book, will no doubt do well at last; but he that hates his school and book, will live and die a slave, a fool, and a dunce.

☞ Children, obey your parents in the Lord : for this is right. Honour thy father and mother, (which is the first commandment with promise,) that it may be well with thee, and thou mayest live long on the earth.

The Sum of the Ten Commandments.
WITH all thy soul love God above,
 And as thyself thy neighbour love.

Our Saviour's Golden Rule.
BE you to others kind and true,
 As you d have others be to you.
 And neither do nor lay to men,
 Whate'er you would not take again.

A Page from an Edition of about 1810.

Ancient Proverb.

Young folks think old folks to be fools;
 but old folks know young ones to be so.

Human Frailty.

OUR days begin with trouble here,
Our life is but a span;
And cruel death is always near,
So frail a thing is man!

Believe in Jesus Christ while young
Then when thou com'st to die,
Thou shalt sing forth that pleasant song,
"Death, where is thy victory?"

Acts 13:11.

John 4:5-7.

Two Pictures.

From Emerson's *The Evangelical Primer* 1810.

A modification of *The New England Primer* that continued to enjoy a wide circulation for many years was Emerson's *The Evangelical Primer*. It was a little larger and thicker than *The New England Primer* and contained considerable more matter but less variety. Among those who vouched for its value and recommended its use in families and schools were Noah Webster, Jedidiah Morse, and the president of Yale College. The contents were

a "minor doctrinal catechism, a minor historical catechism,"—which however only covered Bible history,—and *The Westminster Assembly's Shorter Catechism* with explanatory notes and Scripture proofs and a few hymns. Like all books of its kind it did not fail to set forth the terrors of hell with definiteness and detail, and the closing paragraphs of the doctrinal catechism were these:—

What will be your condition in hell? I shall be dreadfully tormented.—What company will be there? Legions of devils, and multitudes of sinners of the human race.

Will company afford me any comfort in hell? It will not, but will probably increase my woes.

If you should go to hell, how long must you continue there? For ever and ever.

If you should die in your sins, and God should make you miserable, should you have any reason to complain of him? Not the least. I must be speechless.

Amidst our cheer
DEATH may be near;

All shortly must
Be laid in dust.

From a Picture Alphabet in Fisher's
A Youth's Primer, 1817.

A similar book was *The Youth's Primer* "by Jonathan Fisher, A.M., Minister of the Gospel at Bluehill, Maine, 1817." It contained "a series of short verses in alphabetical order, each followed by religious, moral, or historical observa-

tions," and it contained the catechism. The verses and accompanying illustrations were reminiscent of the picture alphabet in *The New England Primer* and occasionally treated the same subject. Thus, the first jingle was—

By ADAM came
Our sin and shame.

Our Parents fell
And we rebel.

For the letter *X* there was this : —

Take ye my YOKE
So Jesus spoke

Borne with delight
'Tis easy quite,

and the picture shows Christ carrying an ox yoke in his hand while two oxen stand in the field in the background.

The "observations" that went with the verses were often very lugubrious, as the extract below will indicate.

The EARTH must burn,
And Christ return;

What then will hide
The sons of pride?

From a Picture Alphabet in Fisher's *A Youth's Primer*.

There is a very pretty little hymn, and a true one, which parents often teach their children, and that very fitly: I will here insert it : —

I in the burying place may see
 Graves shorter there than I;
 From death's arrest no age is free,
 Young children too may die.
 My God, may such an awful sight
 Awakening be to me!
 Oh! that by early grace I might
 For death prepared be.

Young people may very soon learn that they are dying

KINDNESS appears,
 Dissolv'd in tears

And from her store
 Relieves the poor.

From a Picture Alphabet in Fisher's *A Youth's Primer*.

Dust thou art, and to dust shalt thou return. If man had not sinned, he would have lived for ever.

The backbone of *The New England Primer* was *The Westminster Assembly's Shorter Catechism*, which Cotton Mather called a "little watering pot to shed good lessons." He urged writing masters to set sentences from it to be copied by their pupils, and

he advised mothers to "continually drop something of the Catechism on their children, as Honey from the Rock."

This Catechism was the work of the great Westminster Assembly called together by parliament in 1643 — an Assembly composed of one hundred and twenty-one clergymen, thirty of the laity, and five special commissioners from Scotland. It held 1163 sessions and lasted six years. The 107 questions and answers printed in the primer were entitled *The Shorter Catechism*, but the children who were expected to memorize all the ponderous answers could discern no sign of condensation or abbreviation, and they sometimes wondered what a longer one could be like. They were drilled in the Catechism constantly, both in the church and at school. Ministers preached about it, and it was much in every one's mind. Its importance in the thought of the time is suggested by the fact that the largest book printed in New England previous to the nineteenth century was Samuel Willard's *Complete Body of Divinity in Two Hundred and Fifty Expository Lectures on the Assembly's Shorter Catechism*; and this enormous volume of nearly a thousand pages had marked popularity.

Many primers contained a second catechism — *Spiritual Milk for American Babes*, it was called — which in general was of the same type as the Westminster Assembly's, only it had not much more than half as many questions and the answers were shorter.

Public interest in the primer was kept up in

country communities by the custom of "Saying the Catechism" yearly in church. Three summer Sundays were set apart for the purpose, and a portion was recited each Sunday at the close of the afternoon service. It was a momentous occasion, and when the parson announced from the pulpit that, "Sabbath after next, the first division of the Catechism will be recited here," a thrill of excitement ran through the congregation. In this recitation all the children between eight and fifteen years took part. There were fortnight intervals between the three Sundays to allow the children to perfect their memory of the next lot of questions. They must know every answer, and old primers were looked up, new ones bought, and the young folk got to work in earnest.

When the first of the great days came, and the other exercises of the day were concluded, the children, arrayed in their "Sabba'day clothes," gathered in two long lines in the broad aisle, the boys on one side, the girls on the other. The lines began near the deacon's seat under the brow of the pulpit, and very likely extended the full length of the broad aisle and around into the aisles at the rear. Parents and relatives crowded the pews and galleries, all watching the scene with solemn interest—an interest that was tinged on the part of the mothers with anxiety lest their children should not acquit themselves with credit.

The minister, standing in the pulpit, gave out the questions. Each child, in order, stepped forth into mid-aisle, faced the pulpit, made his manners, an-

swered the questions put to him, and stepped back. To be "told" — that is, to be prompted or corrected by the minister — was a dire disgrace, and brought one's ability and scholarship into ill repute. Many were the knees that smote together, and many were the beating hearts and shaky voices among the little people in those two conspicuous lines.

When the second division of the Catechism was recited, the smaller children had dropped out, and, on the third Sunday, reserved for the long and knotty answers in the last portion of the Catechism, only a meagre squad of the oldest children lined up in front of the pulpit.

The Catechism was treated scarcely less seriously in the schools than it was in the churches, and the teachers drilled their pupils in it as thoroughly as they did in spelling or any other lesson. With the primer so constantly used in church, school, and home, the people could not help but be saturated with its doctrines, and no book save the Bible did more to form New England character. In short, this humble little primer was a chief tool for making sure that the children, or, as Jonathan Edwards called them, "young vipers and infinitely more hateful than vipers to God," should grow up into sober and Christian men and women.

IV

THE DISTRICT SCHOOLS

THE years after the Revolution, till about 1840, form the most picturesque period in our educational history. This was preëminently the period of the district school ; and while I refer especially, in what follows, to the experiences of Massachusetts, these experiences did not differ essentially from those of the states neighboring. At first the prevailing poverty and rusticity and loose government made it difficult to maintain any school organization that was at all adequate. Many communities had no schoolhouse until the beginning of the nineteenth century, but hired a room in some dwelling and furnished it with desks and benches.

In colonial times, either the town in its meetings chose the master, fixed his salary, and determined the conditions on which pupils were admitted, or else this business was turned over to the selectmen. Now, however, the control of school affairs in each division of the town was delegated to a "prudential committeeman" elected by the people of his own district. The amount of money to be raised for school support was still determined by the town and was assessed with the other taxes, but after its distri-

A Vacation Visit from the Committeeman to consider Repairs.

bution among the districts there was no responsibility to the town for its expenditure.

Yet it is to be noted that the Massachusetts law of 1789 required supervision. This supervising was done by a committee that usually included the ministers of the gospel and the selectmen in their capacity as town officials. They were obliged to visit and inspect the schools at least once in six months and inquire into the regulation, discipline, and proficiency of the scholars. Their visitations were very formal and solemn affairs. The whole delegation, composed of the community's chief priests and elders — sometimes to the number of more than twenty — went in stately procession to the schools in turn. They heard the classes read in the primer, Psalter, Testament, etc., examined the writing and ciphering books, and addressed the children in short speeches of the customary school-committee style. Just before departing, they entered on the school records their testimony to the good behavior and proficiency of the pupils, and the fidelity of the master. "The school may be said to flourish like the palm tree" is the way one such visitation closed its commendation in the records of old Nicholas Pike's school at Newburyport.

Supervision waned as time went on, until nearly all real power in the affairs of each local district was vested in the prudential committeeman. This individual received no pay and little honor, and there was seldom any rivalry for the position. It went to the man who was willing to serve, and had ability enough to look after the repairs of the building

and other material needs of the school. His educational qualifications were likely to be meagre, and some of the local committeemen were very rude and ignorant. The district system resulted in many a tea-pot tempest, for every person had decided ideas as to how affairs in his or her own neighborhood should be managed, and whatever action the committeeman took, he had to run a gauntlet of criticism that was often far from judicial or gentle. To settle the question of where one of the little frame schoolhouses should stand has been known to require ten district meetings scattered over a period of two years; and the meetings would be attended by men from the mountain farms for miles around. Some of these men had no children to be schooled, and some of them were not interested enough in national affairs to vote in a presidential election. The one point on which all could agree was that the schoolhouse should be built where the land was as nearly valueless as possible. Any spot was good enough, provided it was in the geographical centre of the district. If the schoolhouse was not thus centrally located, and the rights, real or fancied, of individuals were set aside for the convenience of the majority, then there was trouble that might smoulder almost interminably, ready to blaze forth at any time.

Most of the buildings were erected close to the highway, and they encroached on the adjoining field very little. Usually they formed a part of the line fence. A favorite situation was at the meeting of two or more roads, and sometimes the building

would be so near the wheel tracks that a large stone was set up at the most exposed corner to protect the structure from being injured by passing vehicles.

An Old-time District Schoolhouse.

The schoolhouses seldom had enclosures or shade trees, and the summer sun and the winter winds had free play.

The number of pupils to be accommodated in a district was likely to be large, for the children in the old-time families were numerous, and the farm regions had not yet begun to be depopulated by the cityward migration destined to drain them later. Nevertheless, no matter how many the scholars, there was never any thought of providing more than a single teacher. The main purpose of the constructors of the buildings seems to have been to see into how

small a space the children could be crowded, and some schoolrooms not over thirty feet square accommodated a hundred pupils. The structure was generally roughly clapboarded, and it might possibly receive a coat of red or yellow paint, but more likely paint was lacking both outside and in. The school-

Plan of a Characteristic Schoolroom of 1840.

room was lathed and plastered, and was lighted by five or six small windows of twelve panes each. The glass in the windows was often broken, and during school hours, in cool weather, the place of the missing panes was apt to be supplied with hats.

Just inside, next to the entrance, was a fireplace, and at this same end of the room was the master's desk or table—usually a table in the early days;

but later a desk specially contrived by the carpenter, on a slight platform, was customary. Besides serv-

A Teacher's Desk.

ing the ordinary purposes of a desk, it was a repository for confiscated tops, balls, penknives, marbles, jewsharps, etc., and was frequently a perfect curiosity-shop.

Against the walls on the remaining three sides of the room was built a continuous sloping shelf, about three feet from the floor. Long, backless benches

One of the Benches for the Older Pupils.

accompanied it, on which the older scholars sat, facing the wall. While they were studying, they leaned against the edge of the shelf, and when they wrote or ciphered they rested their exercise books and slates on it. Under it, on a horizontal shelf that was somewhat narrower than the upper one, the pupils kept their books and other school belongings when not in use. A line of lower benches for the

One of the Benches for the Smaller Pupils.

smaller children was set within the three-sided square formed by those of the big scholars. The number of children the schoolhouse would hold depended on how closely they could be packed on the benches. In the middle of the room was a limited open space. Here the classes stood while reciting, at which time

they were expected to faithfully "toe the crack" — a particular crack between the floor boards chosen for the purpose of keeping them in line.

The schoolroom walls were dismally vacant except for weather-stains, and grime from the fire which had an annoying tendency to smoke. There were no maps or pictures, and even blackboards were not common until about 1820. The earliest reference I have seen to a school blackboard is in the preface to an arithmetic published in 1809, in Philadelphia. Evidently the use of such a thing as a school aid was an innovation. A footnote explained that "the Black Board should be about 3 feet square, painted or stained with ink, and hung against the wall in a convenient place for a class to assemble around it."

Seats and desks were of pine or oak, rudely fashioned by some local carpenter. Their aspect was not improved by the passing years; for the unpainted wood became more and more browned with the umber of human contact, and every possessor of a jack-knife labored over them with much idle hacking and carving.

Ordinarily there was a narrow entry running across the front of the building that was mostly filled by a big chimney. The boys were supposed to hang their hats in the entry, but the diminutive space and few nails in the wall did not accommodate all the extra apparel, and much of it would lie on the floor to be trampled on. The fireplace which warmed the schoolroom was large and deep, and in severe weather it consumed not far from a cord of wood a week. The wood was always burned green. No

one thought of getting the school wood ready long enough beforehand to allow it to season. Most of what was used was standing in the forests at the time the winter term began. When it was presently delivered in the schoolyard, it lay there exposed, and it was often wet by rain and buried in snow. In summer the place of the woodpile was marked by scattered chips and refuse.

The children usually played around outside for a while before school began in the morning, but at length a sudden outcry would arise, "There he is — the master's coming!" and they would all start pell-mell for the schoolroom and clatter noisily into their seats, girls on one side of the room, boys on the other. In below-zero weather, however, there was no lingering in the open air, and if the lad who made the fire was not prompt, the little children stood about the room crying with cold, while the big boys blew the flickering flames and coaxed them into a brisk blaze. Later in the morning the fire gradually waxed hotter and hotter until the heat was a real trial to those nearest the fireplace. But at the rear of the room the atmosphere might still be frigid, and the back-seat scholars would be asking, "Master, may I go to the fire?" at the same time those in front were complaining, "Master, I am too hot."

In a winter school of forty pupils there might be a dozen young men and women who were practically grown up. On the other hand, quite a group of the youngest could not read, and several had not mastered the alphabet. The little scholars were

most of the time "busy" keeping still. The backless benches they occupied were commonly far too high for them, leaving their feet dangling in mid air. Of course they would get to knocking the shins of one another, a whiffet of laughter would escape, and the noise would increase

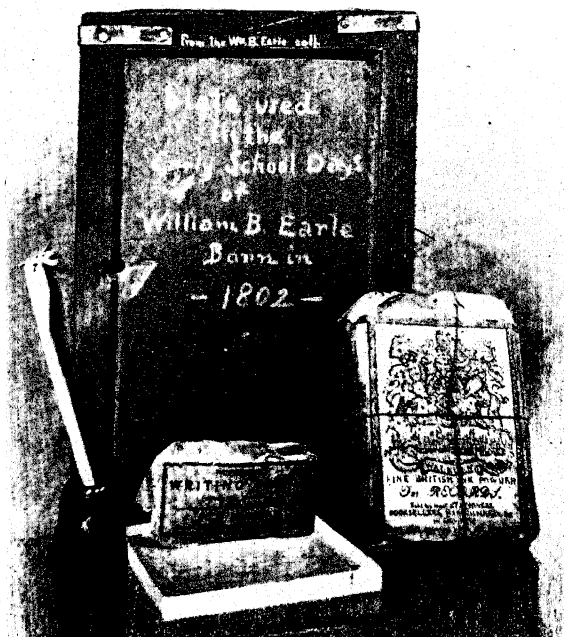

An Illustration from Jenkins's *Art of Writing*, 1813.

until it attracted the attention of the master. Then down would come the pedagogue's ferule on his desk with a clap that sent shivers through the little learners' hearts to think how it would have felt had it fallen somewhere else. "Silence!" commanded the master, and he gave them a look that swept them into utter stillness.

The usual routine of a school day began with reading from the Testament by the "first class." Next came writing and its accompanying preparation of pens and copies, and possibly thawing and watering of ink. Huntington's *American*

Penman, 1824, gives these directions for writing pupils:—

The ink should be the best British ink-powder. The paper should be of the first quality, folded in a quarto form,

Slate, Inkstand, Writing-sand, and Ink-powder.

and stitched across the narrowest side, that the lines may be ruled the longest way of the paper. Where blank writing books, ready ruled, can be procured, they would be preferable, and of less trouble than to rule by hand.

For each writer the master set a copy at the top of a page in the pupil's copy-book. This copy in the case of a beginner would be simply straight lines; but a little practice on these sufficed, and then the master changed the copy to "hooks and trammels" — that is, to curved lines which received their name from their resemblance to the kitchen fireplace implements on which pots and kettles were hung from the crane. For the more advanced pupils the

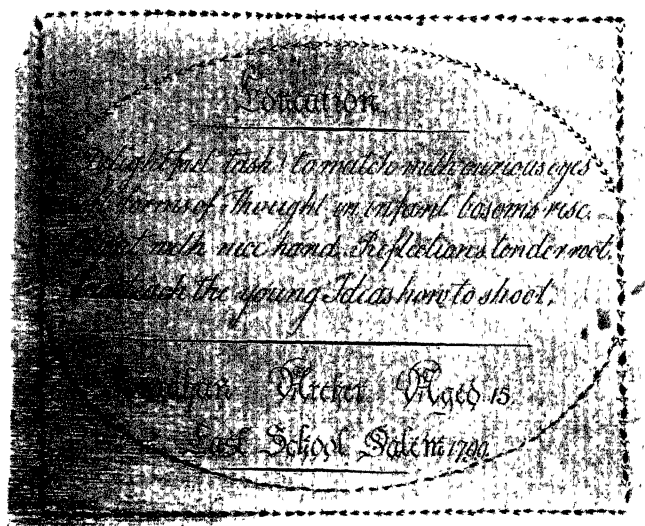

Quill Pens.

master wrote, in a large round hand, "Procrastination is the thief of time," "Contentment is a virtue," or some other wise saw. Every writer was expected to fill out a page daily in imitation of the master's copy. Occasionally a master had narrow slips of engraved copy that he could distribute among the writers. The first series of these copy slips put forth in this country was prepared and published by

the celebrated Boston schoolmaster, Caleb Bingham, in 1796.

If the end of the term was near, the writing scholars, instead of using their copy-books, made exhibition pieces to pass around among the visitors on the last day. Ordinarily they did the work on a sheet six by eight, or eight by ten inches in size; but some of the more ambitious used paper four or five times larger. The sheet would contain a sentence, or several sentences, or, it may be, a short essay on such subjects as Happiness, How to Get Riches, Spring, Resignation, Friendship; and there

Exhibition Piece of a Writing Student.

Size of original, 6 x 8.

was a decorative border and flourishes, and often colored drawings of birds, flowers, pens, houses, ships, or other objects.

Another Exhibition Piece.

Size of original, 8 × 10.

After writing, the second and third classes read from the Testament, and the smallest children were called out to repeat a few easy sentences from their primers or spelling-books.

About half-past ten the teacher said, "You may go out." The recess was short, but the scholars

A Schoolroom Corner.

made the most of it till the instructor appeared at the door and rapped sharply with his ferule on the door-post as a signal for them to come in. Just inside the schoolroom near the door was a pail of water and a cup, and the children helped themselves as they entered. Some drank large quantities—in part to quench their thirst and in part to make an exhibition of their capacity. Work was resumed, and the rest of the session was spent chiefly in a general “spell,” the teacher giving out the words from a spelling-book and the pupils spelling them at the top of their voices.

The afternoon began with reading by the first class from a reading-book, and then the other classes

recited in turn until recess. The final hour was devoted to spelling once more with some minor instruction in abbreviations, currencies, weights, measures, etc. Then there was a roll-call, and the boy whose turn it was to make the fire next morning was reminded of the fact. As the scholars prepared to leave, the master gave positive orders for them to "go straight home and be civil to everybody they might meet."

An interesting description of a school about the beginning of the last century is found in the autobiography of Samuel G. Goodrich, or "Peter Parley," as he preferred to call himself on the title-pages of his numerous books. He was born in 1793 in the little farming town of Ridgefield, Connecticut, and the school he attended was typical of those in all the older Northern states; for the city population of the nation in 1800 was only three per cent of the whole. Hence, nearly all the young people received their educational training in the rural schools. Parley says that the immediate surroundings of the schoolhouse to which he went were

"Peter Parley."

. . . bleak and desolate. Loose, squat stone walls, with innumerable breaches, inclosed the adjacent fields. A few tufts of elder, with here and there a patch of briars and pokeweed, flourished in the gravelly soil. Not a tree, however, remained, save an aged chestnut. This, certainly, had not been spared for shade or ornament, but probably because it would have cost too much labor to cut it down; for it was of ample girth.

The schoolhouse chimney was of stone, and the fireplace was six feet wide and four deep. The flue was so ample and so perpendicular that the rain, sleet, and snow fell directly to the hearth. In winter the battle for life with green fizzling fuel, which was brought in lengths and cut up by the scholars, was a stern one. Not unfrequently the

School in Connecticut.

From *The Malte-Brun School Geography*, 1831.

wood, gushing with sap as it was, chanced to let the fire go out, and as there was no living without fire, the school was dismissed, whereat all the scholars rejoiced.

I was about six years old when I first went to school. My teacher was "Aunt Delight," a maiden lady of fifty, short and bent, of sallow complexion and solemn aspect.

We were all seated upon benches made of slabs — boards having the exterior or rounded part of the log on one side. As they were useless for other purposes, they were converted into school benches, the rounded part down. They had each four supports, consisting of straddling wooden legs set into auger holes.

The children were called up one by one to Aunt Delight, who sat on a low chair, and required each, as a preliminary, "to make his manners," which consisted of a small, sudden nod. She then placed the spelling-book before the pupil, and with a pen-knife pointed, one by one, to the letters of the alphabet, saying "What's that?"

I believe I achieved the alphabet that summer. Two years later I went to the winter school at the same place kept by Lewis Olmstead — a man who made a business of ploughing, mowing, carting manure, etc., in the summer, and of teaching school in the winter. He was a celebrity in ciphering, and Squire Seymour declared that he was the greatest "arithmeticker" in Fairfield County. There was not a grammar, a geography, or a history of any kind in the school. Reading, writing, and arithmetic were the only things taught, and these very indifferently — not wholly from the stupidity of the teacher, but because he had forty scholars, and the custom of the age required no more than he performed.

The voters decided in town-meeting how much money should be expended for school purposes and how it should be distributed. Some towns apportioned it to the districts according to the number of families they contained; others according to the number of children of school age; or the money received in taxes was returned. The last two methods were very unfavorable to the poorer and more

thinly populated districts, and most towns distributed a part of the money in equal sums among the districts, and the rest according to valuation or number of school children. That there were great inequalities is shown by the fact that as late as 1844 several Massachusetts districts were reported to receive less than ten dollars with which to provide schooling. Each district aimed to get the most for its money, and quality was apt to be sacrificed for quantity. The cheaper the teacher, the more weeks of school.

In the larger towns school kept almost continuously, but as a rule the towns were content with a master's winter school of ten or twelve weeks attended by the older children, and a summer term of equal length taught by a woman, chiefly for the benefit of the little ones. The poorer communities had to get along with a single term of two or three months, or possibly of only a few weeks.

The winter term invariably began the Monday succeeding Thanksgiving Day, and preparations were made for it by giving the schoolroom a thorough cleaning, and getting fuel ready. The cleaning was done by the local women with the help of the older boys and girls. None of the scanty school money was spent for janitor's work. The big boys took turns during the term in opening and heating the schoolhouse, and the larger girls alternated in sweeping out. Attendance was irregular, there was much tardiness, and many scholars did not come for some time after the term began because they had to wait until shoes or other articles of clothing were ready.

Early Invent et del.

Ichabod Crane's School.

A considerable proportion of the masters of the winter schools were men whose pedagogic earnings helped them to work their way through the academy and the college. Others, during the larger part of the year, were engaged in farming or labored in the village shops, and took up the task of teaching each recurring winter, reckoning on the wages as a regular part of their annual income. They bargained for a term at a time, and change of place was common, so that they were likely to teach in nearly all the towns neighboring their homes. Some of them with a more pronounced roving disposition wandered far and wide. One of these wanderers was Ichabod Crane who reigned in Sleepy Hollow a few years subsequent to the Revolution. He was a native of Connecticut.

His schoolhouse was a low building of one large room, rudely constructed of logs. It was most ingeniously secured at vacant hours by a withe twisted in the handle of the door, and stakes set up against the window-shutters. The schoolhouse stood just at the foot of a woody hill, with a brook running close by. From hence the low murmur of his pupils' voices conning over their lessons might be heard in a drowsy summer's day, like the hum of a bee-hive; interrupted now and then by the authoritative voice of the master, in the tone of menace or command; or, peradventure, by the appalling sound of the birch, as he urged some tardy loiterer along the path of knowledge.

When school hours were over he had various ways of rendering himself both useful and agreeable. He assisted the farmers occasionally in the lighter labors of their farms. He laid aside, too, all the dominant dignity with which he lorded it in his little empire, the school, and found favor in

the eyes of the mothers, by petting the children, particularly the youngest; and he would sit with a child on one knee, and rock a cradle with his foot for whole hours together.

In addition to his other vocations, he was the singing master of the neighborhood, and picked up many bright

Curley's drawing of a scene

Ichabod Crane at his Boarding-place.

shillings by instructing the younger folks in psalmody. It was a matter of no little vanity to him, on Sundays, to take his station in front of the church gallery, with a band of chosen singers; where, in his own mind, he completely carried away the palm from the parson. Thus, by divers little makeshifts, the worthy pedagogue got on tolerably enough, and was thought, by all who understood nothing of the labor of headwork, to have a wonderfully easy life of it.

Generally the teacher was young, sometimes not more than sixteen years old; but if he was expert at figures, if he could read the Bible without stumbling over the long words, if he could write well enough to set a decent copy, if he could mend a pen, if he had vigor enough of character to assert his authority, and strength enough of arm to maintain it, he would do.

Pluck was indeed of superlative importance, for according to the old-time educational ideal, the lesson of all others to be impressed on the scholars was obedience, and there were pretty certain to be big boys among the pupils, whose love of knowledge was far exceeded by their love of mischief and spirit of insubordination. A muscular clash with them was all but inevitable, and the master who lacked courage or athletic vigor was likely to meet with ignominious disaster. When the boys had "put out" two or three masters in succession, the school got the name of being "hard," and the prudential committeeman was obliged to offer liberal wages and seek out a teacher who could overpower the young savages. That this warfare between the teachers and taught was common is shown by a record of over three hundred Massachusetts schools broken up in the year 1837 by the mutinous pupils or by the incompetence of the teachers.

Severity was held to be a virtue in a teacher rather than the contrary. Some parents were uneasy if the master was backward in applying the rod, and inferred that the children could not be learning much. The means the average schoolmaster em-

ployed to tame and discipline his pupils were extremely primitive. He depended chiefly on a ruler,

A Salem Reward of Merit.

or on what was called "the heavy gad," by which expression was designated five feet of elastic sapling. These two implements were applied with force and frequency. An appropriate share of the chastisement was visited on the girls, and the older ones were not allowed to escape justice any more than the younger ones; for it was thought that a youth of either sex who was not too old to do wrong was not too old to be punished.

We get a suggestive impression of what the discipline could be from the fact that a Sunderland, Massachusetts, schoolhouse erected in 1793 con-

tained a whipping-post set firmly in the schoolroom floor. To this post offenders were tied and whipped in the presence of their mates. It is also related that the schoolroom walls, as time went on, became marred with dents made by ferules hurled at misbehaving pupils' heads with an aim that sometimes proved untrue.

Occasionally a teacher did not punish at all by main strength, but resorted to moral suasion. Horace Greeley tells of attending a New Hampshire district school of sixty or seventy pupils about 1815, the master of which rarely or never struck a blow. He governed instead by appeals to his scholars' nobler impulses. When the master left at the close of his second term, a general attendance of parents on his last afternoon, and a rural feast they provided of boiled cider and doughnuts attested the emphatic appreciation of his worth. Another master of this gentler type held sway in Belchertown, Massachusetts, a little earlier. If his scholars became noisy, he would stamp his foot and cry out, "Children, if you do not behave better, I will go right off and leave you!" and the children would be frightened into orderly quiet.

To turn again to Horace Greeley's reminiscences, a still more curious bit of school lore is his description of the custom of barring out.

At the close of the morning session of the first of January, and perhaps on some other day that the big boys chose to consider or make a holiday, the moment the master left the house in quest of his dinner, the little ones were

Whipping-post formerly in a Sunderland, Mass., Schoolroom.

Height of original, about five feet.

started homeward, the doors and windows suddenly and securely barricaded, and the older pupils, thus fortified

William Biglow.

Who taught for many years in Salem and Boston during the latter part of the eighteenth century and the early part of the nineteenth. From a portrait in wax.

against intrusion, proceeded to spend the afternoon in play and hilarity. I have known a master to make a desperate struggle for admission, but the odds were too great. If he

appealed to the neighboring fathers, they were apt to advise him to desist, and let matters take their course. I recollect one instance, however, where a youth was shut out who, procuring a piece of board, mounted from a fence to the roof of the schoolhouse and covered the top of the chimney nicely with his board. Ten minutes thereafter, the house was filled with smoke, and its inmates, opening the doors and windows, were glad to make terms with the outsider.

The usual sum paid to a master was ten or twelve dollars a month, though a wealthy district might, in exceptional cases, give twenty dollars to retain a man of culture and experience. Women earned from four to ten dollars. Even after the middle of the nineteenth century the standard pay for a woman teacher in many districts was one dollar a week. Instances of still lower wages can be found a few decades earlier. Thus a "qualified woman teacher" in a Connecticut town in 1798 received a weekly stipend of sixty-seven cents, and some masters of that period were paid no more. Besides the money remuneration, the districts boarded the teachers. Otherwise, the salary would have loomed much larger, and the town appropriation would have quickly melted away. The teacher "boarded round" among the homes of the pupils, spending at each house a length of time proportioned to the number of school children in the family. The custom was common until after 1850. The following paragraphs from what purports to be a schoolmaster's diary written early in the last century give a very spirited account of a week's experience of—

Boarding Round in Vermont.

Monday. Went to board at Mr. B's; had a baked gander for dinner; suppose from its size, the thickness of the skin and other venerable appearances it must have been one of the first settlers of Vermont; made a slight impression on the patriarch's breast. Supper — cold gander and potatoes. Family consists of the man, good wife, daughter Peggy, four boys, Pompey the dog, and a brace of cats. Fire built in the square room about nine o'clock, and a pile of wood lay by the fireplace; saw Peggy scratch her fingers, and couldn't take the hint; felt squeamish about the stomach, and talked of going to bed; Peggy looked sullen, and put out the fire in the square room; went to bed, and dreamed of having eaten a quantity of stone wall.

Tuesday. Cold gander for breakfast, swamp tea and nut cake — the latter some consolation. Dinner — the legs, &c., of the gander, done up warm — one nearly despatched. Supper — the other leg, &c., cold; went to bed as Peggy was carrying in the fire to the square room; dreamed I was a mud turtle, and got on my back and could not get over again.

Wednesday. Cold gander for breakfast; complained of sickness, and could eat nothing. Dinner — wings, &c., of the gander warmed up; did my best to destroy them, for fear they should be left for supper; did not succeed; dreaded supper all the afternoon. Supper — hot Johnny cake; felt greatly revived; thought I had got clear of the gander, and went to bed for a good night's rest; disappointed; very cool night, and couldn't keep warm; got up and stopped the broken window with my coat and vest; no use; froze the tip of my nose and one ear before morning.

Thursday. Cold gander again; much discouraged to see the gander not half gone; went visiting for dinner and supper; slept abroad and had pleasant dreams.

Friday. Breakfast abroad. Dinner at Mr. B.'s; cold gander and potatoes—the latter very good; ate them, and went to school quite contented. Supper—cold gander and no potatoes, bread heavy and dry; had the headache and couldn't eat. Peggy much concerned; had a fire built in the square room, and thought she and I had better sit there out of the noise; went to bed early; Peggy thought too much sleep bad for the headache.

Saturday. Cold gander and hot Indian Johnny cake; did very well. Dinner—cold gander again; didn't keep school this afternoon; weighed and found I had lost six pounds the last week; grew alarmed; had a talk with Mr. B. and concluded I had boarded out his share.

In the newer and thinner populated portions of the country education was much neglected. Communities either had a poor school or none at all. We get some idea of the difficulty of obtaining an education on the frontier from the life of Abraham Lincoln. The schools he attended between 1814 and 1826 in Kentucky and Indiana were held in deserted log cabins with earthen floors. The windows were small holes cut through the logs; and in some of the schoolhouses sheets of paper greased with lard served in the window holes instead of glass. Lincoln never was able to go to any school regularly and had less than a year's schooling in all. He was seventeen when he attended his last school. It was four and a half miles distant from the home cabin, and no doubt the long daily walk back and forth seemed a waste of time to most of his relatives. The region was still new and but little subdued, with many bears and other wild animals in the woods, and

Lincoln has said of the schoolmasters that "No qualification was ever required beyond 'readin', writin', and cypherin' to the Rule of Three.' If a straggler supposed to understand Latin happened to sojourn in the neighborhood, he was looked upon as a wizard."

Teaching offered no rewards sufficient to attract men of education or capacity, and it sometimes seemed as if a master's chief reason for taking up teaching was inability to earn anything in any other way. Lincoln acquired much of his early education at home. In the evening he would pile sticks of dry wood into the brick fireplace. These would blaze up brightly and shed a strong light over the room, and the boy would lie down flat on the floor before the hearth with his book in front of him. He used to write his arithmetic sums on a large wooden shovel with a piece of charcoal. After covering it all over with examples, he would take his jack-knife and whittle and scrape the surface clean, ready for more ciphering. Paper was expensive, and he could not even afford a slate. Sometimes when the shovel was not at hand, he did his figuring on the logs of the house walls and on the doorposts, and other woodwork that afforded a surface he could mark on with his charcoal.

An interesting sidelight on education in the district schools is furnished by an official report of 1838 concerning the three thousand school buildings of Massachusetts. Their estimated value was little above a half million dollars. To-day the state has single school structures which have cost more than

that. The report says "there is no other class of buildings within our limits, erected for the permanent

Box Desks and Cast-iron Stove.

or temporary residence of our native population, so inconvenient, so uncomfortable, so dangerous to

health by their construction within, or without, abandoned to cheerlessness and dilapidation." In one town, for a series of years, all the money annually appropriated for repairs on its eight schoolhouses was five dollars — an average of sixty-two and a half cents each.

Conditions in the schools of other states were no better. Thus the local reports in Connecticut between 1840 and 1850 make frequent mention of

A Schoolboy.

A Schoolgirl.

the small size of the schoolrooms as compared with the number of pupils they had to accommodate. Some of the rooms were less than seven feet high; often they had broken windows, clapboards hanging

At Work.

loose, props up at the blinds to keep them in place, stoves without doors, leaky roofs, patches of plastering missing and the rest of the plastering much marred and begrimed; crevices in the floor admitted any quantity of cold air, while the woodwork of the desks and walls was cut and marked "with all sorts of images, some of which would make heathens blush."

The required studies now were reading, spelling, writing, arithmetic, geography, and grammar. Algebra and even Latin and French were attempted in an occasional school if the teacher was equal to them. Yet with all this broadening in studies and all the advances in school-books, and in spite of the correct English the books were supposed to impart, the scholars in their daily conversation continued to use the vernacular. Had they been reproved for so doing, they would have felt affronted.

One handicap to effective teaching was the fact that it might happen no two pupils were equally advanced in their studies—possibly did not have the same text-books. The books were often much worn and defaced, for they were family heirlooms and continued in use as long as they held together. One scholar would bring a volume used by some member of the family of the preceding generation; another a book procured many years before for an elder brother or sister, and a third would appear with a copy just bought.

Some one has said, "It seems to me that we may learn everything when we know the letters of the alphabet;" and it is unquestionably true that the

capable and aspiring youth can make a very slender educational foundation serve to give an opportunity for great development. In most of the old district schools little was imparted beyond a few bare rudiments, the teachers were often ignorant, and sometimes brutal, the methods mechanical and dreary. Notable men have come from "the little red school-houses," but this was because of their own native energy and thrifty acquisitiveness, and was not due to any superlative virtues of the schools themselves.

On the Way Home.

SUMMER SCHOOLS AND ACADEMIES

THE old-time summer schools were nearly always kept by women. A man would have been considered out of place — would have had an unnatural appearance presiding over a school at that season. The women teachers were usually young, ambitious girls, eager to earn enough to

A Summer School as pictured in Bolles's *Spelling Book*, 1831.

allow them to attend an academy for a term or two. Most of them married later; but others lived on as schoolmarms, "sometimes sweetening as they ripened, sometimes quite the contrary."

The law ordered that the teachers should have good moral character and competence to teach the

The End of Recess.

required branches. What furnished a woman, however, the surest passport to employment was to be related to some prudential committeeman. He was all-powerful in his district, and while his daughters or sisters, of course, had first chance, if none among these closer relatives had anxiety for the place, there was opportunity for the more remotely connected. The partiality of the prudential committeeman in this respect was proverbial, and no little friction resulted from the family arrangements he was wont to make. Occasionally the discus-

sion would split a school in two, and a portion of the families in the district would secede and set up a school of their own in some dwelling or shop ; but as a rule nothing was done until the next annual meeting, when another committeeman might be chosen and a new dynasty substituted.

The employment of women in the public schools had become general, and coincident with this recognition of their value as teachers came the enlarging of the educational opportunities of the girls ; but it was not until the nineteenth century was well advanced that they had anything approaching the same advantages as the boys. Books had nearly always been considered outside the feminine sphere from the most ancient times. When Françoise de Saintonges, in the sixteenth century, wished to establish girls' schools in France, she was hooted in the streets, and her father called together four doctors of law to decide whether she was possessed of a devil in planning to teach women. In like manner, early in the last century, when Mary Somerville's father discovered that she was engaged by herself in mathematical and other studies, he said to his wife, "Peg, we must put a stop to this, or we shall have Mary in a strait-jacket one of these days."

Instruction in household duties was the essential thing, and if a girl had that, she could do very well without book-learning ; yet there was a time in England about the period of Queen Elizabeth when English girls studied Latin and Greek, and the wisest masters were glad to teach them. However, this state of affairs passed away, and educated

women came to be regarded with marked disfavor by English gentlemen.

In our own country, also, while the seventeenth-century girls to some extent attended the public schools, they gradually dropped out. The early school laws did not recognize them at all, expressly stating that "the word 'children' is to be interpreted to mean 'boys.' " There was no controversy on the subject. It simply seems to have been thought unnecessary that girls should be instructed in the public schools. Nevertheless, either at the dame schools or at home, they nearly all learned at least to read and sew. Writing was held to be much less important, and not by any means an essential accomplishment for females in common life. Scarcely one in a dozen women could write in 1700, and of those whose names appear in the recorded deeds of the early part of the eighteenth century less than forty per cent sign their names. All the rest make their mark. Even at the time of the Revolution many of the patriot wives and mothers could not write.

As an example of feminine disadvantages it is worthy of note that the town of Northampton, now one of our most famous educational centres, voted in 1788 to be at no expense for the schooling of girls, and they were not admitted to its public schools until 1802. President Quincy of Harvard College, in his history of Boston, says that in 1790 Boston girls were allowed to attend the public schools in the summer months only, and not then unless there were seats left vacant by boys. This semi-exclusion lasted until 1822, when Boston became a city. The girls

were then given free access to the common schools, and presently another innovation was made, whereby a high school was established for them with a three-year course, though Latin and Greek were not included in the curriculum; but this school was such an "alarming success" that it was abolished after eighteen months' trial. The school authorities were apparently dismayed at the way the girls crowded into the new high school, and Mr. Quincy says of the pupils, "Not one voluntarily quitted it, and there was no reason to suppose that any one admitted to the school would voluntarily quit for the whole three years, except in case of marriage."

Boston was very conservative in this respect.

A Little Girl of the Eighteenth Century.

From a pastel.

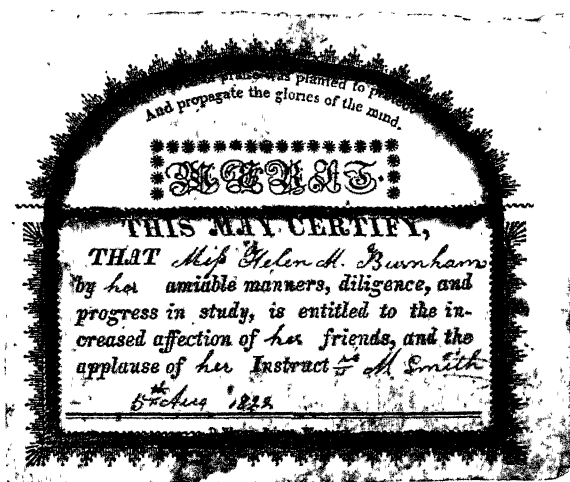

Throughout the country as a whole there began to be a considerable change in public sentiment regarding feminine education immediately after the Revolution, and within a decade or two, most places allowed the girls to attend all the town schools. Yet the new advantages were accorded only gradually and in the face of a good deal of opposition. At first some towns were cautious enough to arrange that the boys should be sent home earlier in the forenoon and afternoon to give the girls a chance to come in for the time remaining; but the girls could attend all of Thursday afternoon, for that was the boys' holiday. Even these slender schooling privileges were cut off in the winter out of consideration for "the female health." Thus the summer district schools in many instances continued to be, if not the only educational reliance of the girls, at least a very important one. There they were taught reading, writing, and spelling, and great attention was paid to polite behavior. The scholars "made their manners"—that is, the girls dropped a

A Reward of Merit, about 1820.

courtesy and the boys bowed, to the teacher when they came into the schoolroom and when they left it. They made their manners while out at play to

passing strangers ; and if the minister or some other prominent person went by, they formed in line and

A Reward of Merit, 1822.

bowed and courtesied all together. At the end of the school day the teacher would tell them that as soon as they reached home they must remember to make their manners to their parents.

Besides studying their books, the girls did regular stints at school of sewing and knitting, and each made an elaborate sampler which was expected to be a household treasure ever after. The sampler was a square or oblong of coarse linen, or possibly silk, on which it was customary to stitch the alphabet in capitals and small letters, the digits, a verse of sentiment appropriate to a child student, and the worker's

name, age, and place of abode. There were also decorations — borders, conventional trees, and flower-pots, and sometimes abnormal animals and people — all resplendent in many-colored silks or worsteds. Not only was the sampler intended to be a thing of

A Sampler.

Size, 10 × 12.

beauty, but the alphabet portion of it was useful for reference to show the proper formation of the letters when clothing was to be marked. It was in fact this reference feature that made the article a "sampler." The smaller samplers were only about seven by nine inches, but the larger ones were two or three

times those dimensions. Some of the verses and inscriptions were very quaint, as is witnessed by the two which follow:—

Next Unto God Dear Parents I Address
 My Self to You in Humble Thankfulness
 For All Your Care And Pains on me Bestow'd
 The Means of Learning Unto Me Allow'd
 Go on I Pray And Let me Still Pursue
 Those Golden Paths the Vulgar Never Knew.

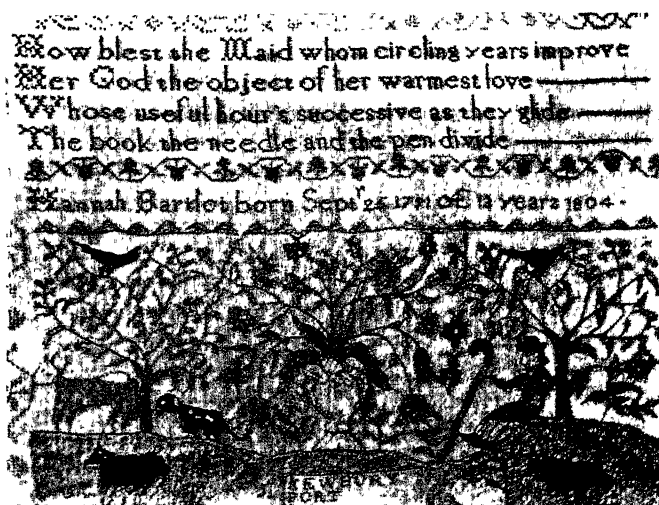

One of the More Elaborate Samplers.

Size, fifteen inches square.

Elizabeth Briggs is my Name And With my
Hand I Have Wrought the Same in the 10th year
Of my Age, Salem February 15th 1805

How should we scorn these clothes of flesh,
These fetters and this load,
And long for evening to undress
That we may rest with God.

Lower Half of a Sampler.

Showing a characteristic verse and some intricate and romantic designing. Width of original, fifteen inches.

When the girls began to go to the masters' schools, the more aspiring of them adventured a little way into geography, grammar, and mathematics. The ignorant derided them for so doing and, with regard

to the arithmetic, would ask them if they expected to carry pork to market, else why should they want to take up such a study. Some of the girls attended private schools — “finishing schools,” they were called — which had been established at the dictate of fashion to cultivate ladylike accomplishments. All the larger towns had schools of this kind. Boston gentlewomen were accustomed from very early times to eke out their incomes by taking into their homes little girls and misses from the country and from the southern colonies and the Barbadoes who wanted to attend the finishing schools of the city. Salem and Newburyport were also favorite towns for acquiring feminine polish. The finishing schools taught a smattering of French, the art of embroidery and other fancy needlework, considerable dancing, and many elegant manners. Dancing seems to have had an especially important place among the young misses’ attainments, though in early colonial days it was inveighed against by both magistrates and ministers. Increase Mather loudly proclaimed its evils just as he did the evils of wearing wigs — “Horrid Bushes of Vanity,” he called those head adornments. But perverse human nature adopted both wigs and dancing, and presently “ordination balls” were given when a new minister was installed.

About the beginning of the last century, girls’ schools of genuinely serious aims and purposes came into being, and their high character and the success of their pupils, and the like success won by the girls in the academies, were very effective in

breaking down the opposition to feminine education. The higher institutions of learning for girls established in those early years shone with added lustre because their novelty attracted workers with the enthusiasm of pioneers, and with a keenness of appreciation and exhilaration that could be elicited by no other circumstances. These schools were in a marked way religious, their pupils absorbed moral earnestness, and they had a deep and lasting influence on New England life. They furnished heroines of the mission field and some of the most ardent workers against intemperance. From them, too, came such numbers of wives for the clergy that the humorous appellation "ministers' rib factories" was not wholly amiss. This nickname was the more telling, owing to the fact that the buildings them-

"A Minister's Rib Factory."

Mary Lyon's Mt. Holyoke Seminary, built in 1837.

selves were apt to be great barren barracks with very much of the factory look.

I have incidentally referred to the academies. Their waxing and waning form a curious phase of our educational development. In the eighteenth century the growth of the scattered villages, and the division of the towns into school districts, was attended by a gradual discontinuance of the grammar schools. Indeed, the law requiring grammar schools was relaxed, until we find in Massachusetts only seven towns where they were obligatory in 1824. The people preferred to spend all the money raised for education on the district schools; but some channel of more advanced instruction was a necessity, and there began to come into being many private schools and incorporated academies. The first of the latter was established in 1780 at Andover; others soon followed, and by 1840 the state had nearly one hundred of them. The purpose of the founders was primarily to provide a means by which young men could be fitted for college. They were imperatively needed. For instance, when Leicester Academy began its work, there was not in all Worcester County an educational institution higher than the district schools. The few boys who were determined to attend college conned their Latin and Greek by their own firesides, and recited to the parish ministers.

The standard studies in the academies were English, Latin, Greek, and French; writing, arithmetic, and geography; the art of speaking, logic, geometry, and philosophy. Some of the academies were little more than day schools for town pupils; others drew from a wide constituency, not alone in their

own state, but from other states throughout the Union. They did excellent service in broadening the scope of education, but they fostered the idea of private schools. As a consequence there was a marked inclination among the well-to-do to withdraw their children from the common schools, which were thus left for the poorer families, the indifferent and careless, to get from them what little they could.

A typical academy was that at Deerfield, Massachusetts, formally opened in 1799. It had 269 pupils

An Old New England Academy.

the first year. The building was of brick, sixty by eighty feet, two stories high, and surmounted by a cupola. Ten years of prosperity encouraged the trustees to add another story and a wing, and a bell was bought and put in the cupola. Twelve rooms were fitted up for boarders, and rented at a weekly charge of from seventy-five cents to one dollar and a half. The latter sum was the standard price for board. It was ordered that "the preceptors and

ushers, besides teaching the arts and sciences, should instil into the minds of the pupils moral and Christian principles, and form in them habits of virtue and the love of piety." The study of natural history, natural philosophy, and logic was encouraged, and "no person was suffered to attend to painting, embroidery, or any other of the ornamental branches to the neglect of the essential and fundamental facts of education."

For the regulation of the pupils' conduct there was a code of by-laws of thirty-six articles. Among other things, these provided that pupils of different sexes should not meet on the grounds or within the walls of the academy except at meals and prayers, nor walk or ride or visit together, under a penalty of one dollar. They were fined a dollar if they were absent from meeting Sunday, Fast Day, or Thanksgiving Day, and the same if they walked in the streets and fields or visited Saturday night or Sunday. They must forfeit a dollar if detected playing cards, backgammon, or checkers in the building. Ball and similar games near the academy were prohibited under a penalty of six cents, and a like sum was exacted from students found out of their rooms during study hours. The morning prayers were at five o'clock, or as soon as it was light enough to read; fine for absence, four cents—for being tardy, two cents. The appointed time for beginning to study was an hour later. Fines were imposed for damage to library books, or books belonging to fellow-students, at the rate of six cents for a blot, and six cents for each drop of tallow; while for every leaf

torn, six cents an inch must be paid, and for every mark or scratch two cents. Separate schoolrooms were provided for the boys and girls, and separate entrances to the building, and the yard was divided by a high board fence to keep the sexes apart while at play.

The decay of the academies dates from about the middle of the nineteenth century, when Horace Mann began to urge the necessity of free high schools. These were rapidly established, and as they and the academies derived their students from the same source, the academies weakened. Most of them, after dragging out a lingering existence for a longer or a shorter time, finally succumbed. A few of the stronger ones adjusted themselves to the altered conditions and survived, but their students now came chiefly from the homes of the wealthy, and they were no longer the resort of the awkward rural youths and maids, to whom a short period in the academy was often their only opportunity for a glimpse of the broader world of culture and books.

VI

FLY-LEAF SCRIBBLINGS

CHILDREN have always been prone to scribbling, and the pupils in the old district schools were no exception to the rule. They did not by any means confine their chirography to their copy-books. A fair surface of paper, no matter where found, was a temptation to some of them, and all had moments of mental ennui when the employment of the fingers in aimless, or at least unnecessary, whittling and writing was as natural as breathing. Instances can be found where there was a genuine ferment of literary or artistic inspiration, but mostly the children produced only copies of what they had seen their schoolmates do. Probably the young folks of two or three generations ago scribbled less in their school-books than their descendants; for the majority of the old books that have survived the wear and tear of use and the casualties of the passing years are comparatively free from markings. Books were rarer and far more valued in the early days than later, and were treated with more respect, though it must be admitted the comparative immaculateness of such copies as are now extant is in part due to the fact that the books most decorated were the soonest to go to pieces, and they no longer exist. But

search and appeal to elderly people bring to light many curious bits of school-child lore.

The first thing the youthful proprietor of a book was likely to do was to mark it with his name. Usually he put his signature on the front fly-leaf, but he might write it on the final fly-leaf, or almost anywhere else in the book. Sometimes he lettered

Jabez Backus
BOOK. 1790
A Signature.

From a Dilworth's *Schoolmaster's Assistant*.

it outside on the cover, or even on the edges of the leaves. Various common forms of name inscriptions are given below. They exhibit considerable originality in spelling and in punctuation or the lack of it, and are transcribed just as they were written.

William Orne's 1779

Mifs Nottinghams Seminary for Young ladies

In an old Latin book I find this signature:—

Andrew Hillyer Ejus Liber

A D 1700 and frose to death.

The Latin students were fond of writing “Ejus Liber,” but the line which gives the date is the only one of the kind I have seen. Frequently the names were accompanied by verses such as:—

*Steal not this Book
For fear of Shame
For fear you read
The owners name
Asa Stephens Book*

A Warning.

From a Dwight's Geography, 1802.

If this book should chance to roam
Box its ears and send it home.

Steal not this book, for if you do,
Tom Harris will be after you.

Steal not this book for fear of strife
For the owner carries a big jackknife.

Steal not this book my honest friend
for fear the gallos will be your end
The gallos is high, the rope is strong,
To steal this book you know is wrong.

Let every larking thief be taught,
This maxim always sure,
That learning is much better bought
Than stolen from the poor.
Then steel not this book.

*Whether this Book
be cheap or Whether
er this Book be Dear
ar Let This be your
Plan Love your
School an learn as much
uch as you can*

Wise Advice in a Murray's English Reader, 1822.
Reduced one-half.

The longest and most impressive of these incantations against possible purloiners was the following:—

Whosoever steals this
Book away may
Think on that great
judgement day when
Jesus Christ shall
come and say
Where is that book you
stole away.
Then you will say
I do not know
and Christ will say
go down below.

The most dubious fly-leaf inscription that I have
seen is this one :—

Francis Barton
is my name a merica
is my nation
pitsfield is my
dweling place
and christ is my
salvation when
i am dead and
in my grave and
all my bones are
rotton its youl
remember me or else
i will be forgotten.

In a tiny volume published in Boston in 1685
entitled the *Protestant Tutor*, I find a quatrain of a
very different character from the rough humor or
the belligerent threatenings of the usual fly-leaf
entries. It runs thus :—

William Graham his Book
 God grant him grace therein to look,
 that he may run that blessed race
 that heaven may be his dwelling Place.

A rhyme of similar gentleness was : —

This Book was bought for good Intent
 pray bring it home when it is lent.

Patty Olcott's

American Preceptor

See these leaves and turn
apart before this book is
learn't by heart

Lines from a Bingham's *American Preceptor*, 1803.

Sometimes a series of jingles was so arranged as to lead the reader on a wild goose chase. At the top of one of the early pages would be written : —

If my name you wish to see
 look on page 103.

Turn to that page and you have : —

If my name you cannot find
look on page 109.

Again do as you are bidden, and you are rewarded
with : —

If my name you cannot find
Shut up the book and never mind.

On occasion the poetry dealt with some incidental
topic, as, for example, these lines in an Adams's
arithmetic : —

Oh may I learn with true submission
Daniel Adams composition.

A ditty which was considered a fitting characteriza-
tion to inscribe in the school histories was this : —

If there should be another flood,
Then to this book I'd fly ;
If all the earth should be submerged
This book would still be dry.

Among the schoolgirls attending the academies it
was a fad to write sentimental verses of affection in
each other's books, thus : —

To Miss Lottie

I always wish you happiness
No sorrow veil your earthly bliss ;
And when this little piece, you see
Of friendship mine remember me.

Your friend and schoolmate

MARY ANN W.

To Ellen

Many, many a voice will greet me,
In a low and gentle tone
But its music will not cheer me
Like the cadence of thine own.

A FRIEND

The boys once in 'a while made similar declarations, but these were usually in prose, and evidently were not intended so seriously as those the girls produced. Very likely the lad to whom the endearments were addressed would append joking comments. Here are specimens of masculine handiwork : —

You give your heart
to me and I will give
mine to you we will lock them
up together and throw away the key

No Sir ee.

Oh yes

I shall always think of you as a dear friend

S. GRAY

All right Gray ; only don't tell any one else about it

LEE

A school-book in my possession that is dated 1832 has pencilled inside the front cover these lines : —

Puzzle

written over the commandments

P.R.S.V.R.Y.P.R.F.CTM.N

.V.RK..PTH.S.PR.C.PTST.N

No solution was offered, and I studied over the mysterious medley for some time before I saw that it made sense if an *E* was substituted for each of the dots.

In another of my books, published a dozen years later, is a fly-leaf assertion that

11 weeks will never go away
never never never never

What repining and hopeless melancholy in looking forward to the long term just begun!

Some children would fill in with their lead pencils every letter *o* on the page they were studying, and they might even fill in the loops of the *b*'s, *d*'s, and other letters that had enclosed spaces suited to the whim. They delighted also to go over with pencil portions of the illustrations. If imaginative, they were apt to improve the pictures by putting in new features, and would run ropes to the ground from a sailing balloon, draw weather-vanes on the houses, etc.

Toward the end of the spellers was often a page of first names, male and female; and the owner of a book, recognizing some of these as belonging to his friends, was very likely inspired to write in the appropriate surnames, as follows: —

A'bel Chapin
Alon'zo Tyler
Eli'shä Gunn
Ab'by Bliss
Nan'cy Steadman

I have a Webster's *Elementary Spelling Book* that belonged to S. Augusta Tinker. She must have liked her name, for it is found on page after page, and occasionally several times on the same page. The S. stood for Sarah or Sally, and occurs written in each of these ways. Evidently the book served for communication with other scholars, else why such pencillings as —

you must go out of school if you dont be
have better
lend me piece of paper
you may tak it after recess

Here is an item which I suppose must be credited to one of the owner's schoolmates:—

Augusta is goozey

Another interesting freak is the supplementing the short sentences of the book with comments in this fashion:—

The mason puts a layer of mortar between bricks. they dont
Intemperance is the grievous sin of our country. so it is
Boys like a warm fire in a wintery day. so do girles

A Fly-leaf Bird.

From a grammar of 1714.

Along with the writing in the old books there is more or less drawing. The very early books sometimes have fly-leaf sketches of Ind-

ians and log houses. The later books have houses of a more modern sort, and you find rude drawings of steamboats, houses, birds, flowers, faces, and the like. Often a penny or other coin was slipped under the fly-leaf and the surface of the paper covering the coin was rubbed with a piece of lead from the schoolboy's pocket, or with the blunt end of a pencil. Usually the boy was not satisfied till he got a print of both sides of the coin.

Five characteristic school-book decorations are shown on pages 162 and 163. The first is a scroll that could be lengthened out clear across a fly-leaf or all down a text-page border. The second is a flourish that frequently appeared beneath a signature. The third was made by drawing equidistant from one another sixteen dots

A Soldier.

Drawn in Webb's *The Common School Songs*, 1843.

A Fly-leaf Rubbing from an Old Medal.

and then pencilling a consecutive line that would gradually enclose them all with its loops. The fourth is a scheme of the same sort which was sometimes called "a basket of eggs." The last design was known as "a Spanish S." All these things were drawn on slates and blackboards as well as in the books.

The children had numerous methods for defacing their school-books, and they also had certain devices

Scroll Work.

A Diminishing Scroll.

for keeping them in good order. Many of the older books are protected by an outer cover of sheepskin neatly folded in at the edges and sewed

A Conventional Combination of Dots and Line.

in place with homespun tow. After 1825 this outer covering was apt to be calico, and sometimes there were tie strings attached at the sides. The girls

were addicted to the use of a "thumb paper," folded and slipped in where the thumb rested when the

"A Basket of Eggs."

book was in use. This might be merely made of a piece of newspaper or wrapping paper; or it might be nice new foolscap, or possibly bright blue or red glazed paper. Some children had their thumb papers attached to the book by a long thread, and they were particularly happy if instead of the thread they acquired a bit of gay-colored sewing-silk from the mother's work-basket.

The most serious attention the average boy gave to his books

"A Spanish S."

had to do with the corners. When the leaves began to be dog-eared, he would get out his knife and carefully pare off the page corners of the entire book;

A Protecting Cover of Leather stitched with Tow.

Reduced one-third

and if he had an eye for beauty, he was not satisfied with a straight cut, but would round the corners. As soon as the leaves again showed a dog-eared tendency, the paring process was repeated.

For nearly fifty years after the Revolution the common text-book binding was either full leather, or was a leather back attached to sides of wood that were pasted over with blue paper. The full leather books, unless

quite thin, had the titles on the backs; the others had no lettering. Occasionally, instead of blue paper, there was marble paper or a fancy paper suggestive of wall-paper on the sides. The earliest book I

have seen with printed sides is dated 1818, but within the next decade cover printing became common. It soon was customary to print on the back cover a list of books issued by the publisher. At first, however, the publisher, if he was also a book-seller and stationer, as he was pretty sure to be, used this space for advertising like the following :—

For Sale.

Bibles, Testaments, Spelling Books, Readers and Geographies, Atlases, Primers, Writing-paper, Inkstands, Ink-Powder, Slates, Pencils, Quills, Pen-knives, Wafers, Psalm Books, Writing Books, on the covers of which is printed a System of Writing.

There is a similar suggestion of primitiveness and rusticity in the way the publishers sometimes made known their location. Thus, at the foot of the title-page of *The American Grammar* by Robert Ross, 1782, we find, “Hartford, Printed by Nathaniel Patten a few Rods North of the Court-House”; and on a *New England Primer* title-page of 1770, “Boston, Printed and Sold by William M’Alpine,

HARTFORD :

PRINTED BY HUDSON AND GOODWIN.

Sold by them, at their Book-store, opposite the North Meeting-House. By *I. Beers*, New-Haven. By *B. Tallmadge & Co.* Litchfield, By *T. C. Green*, New-London ; and by *Andrew Huntington*, Norwich.

1802.

A Title-page Imprint.

From Dwight's *A Short but Comprehensive System of the Geography of the World.*

about Mid-way between the Governor's and Dr. Gardiner's in Marlborough Street."

The publishing was not by any means confined to the large cities. In New England, the chief source of school-book supply, every town of any consequence and enterprise seemed to have its text-book publishers. The compilers were very apt to put forth their books from the town where they lived. Thus, Hartford, which was the home of an unusual number of prolific text-book authors, was for a time the most important educational publishing centre in America.

A Fly-leaf Animal.

VII

NOAH WEBSTER AND HIS SPELLING-BOOK

NOAH WEBSTER was born October 16, 1758, in Hartford, Connecticut, about three miles from the centre of the city. His father, Noah Webster, Sr., was a respectable farmer, a deacon in the church, and a justice of the peace. The boy worked on the home farm and attended the village school. When he had reached the age of fourteen, we find him beginning the study of the classics under the instruction of the parish clergyman, and two years later he was admitted to Yale College. The Revolutionary War seriously interrupted the college course, but he graduated with credit in 1778, and his father gave him an eight-dollar Continental bill, then worth about half its face value in specie, and told him he must henceforth rely on his own exertions.

It had been young Webster's intention to become a lawyer. The country, however, was impoverished by the war, and his first necessity was to make a living. So he resorted to school teaching. Pedagogy at that time was attended with unusual difficulties. Not only was the war still in progress, but the interruption of intercourse with Great Britain had made school-books very scarce. The need of

a home source of text-book supply was evident, and in 1782, while in charge of a school in Orange County, New York, Webster compiled a spelling-book. This was printed at Hartford the next year

Noah Webster.

and gradually won very wide acceptance — so wide, indeed, that during the twenty years its author was engaged in preparing his dictionary, 1807 to 1827, the profits from that one little school-book furnished

the entire support of his family, though his copy-right receipts were less than a cent a book. The sales went on increasing up to the time of Mr. Webster's death, at the age of eighty-four. A million copies annually were then being called for and the total distribution had reached twenty-four millions.

In his person Webster was tall and slender. To the very end he was remarkably erect, and his step light and elastic. He was enterprising, self-reliant, and very methodical, and a most persevering worker. Besides the monumental labor of making his dictionary, he had much to do with newspapers and magazines, both as editor and contributor, and he wrote a great number of books and pamphlets on literary, historical, medical, religious, scientific, and political subjects, some of which were of very marked value in forming public opinion. He taught school in his early manhood for about ten years, and then, from 1789 to 1793, was a lawyer in Hartford. During other periods, he served as an alderman in New Haven, as a judge in one of the Connecticut courts, and as a member of the Massachusetts legislature. His activity was astonishing in amount and variety, and it was unceasing. Mental exertion seemed to be the native element of his soul.

Webster had originally intended to call his speller *The American Instructor*, but by the advice of the president of Yale College, the title was changed to *The First Part of a Grammatical Institute of the English Language*, the other parts being a grammar and a reader issued shortly afterward. Profound names were to the liking of the old college presidents.

When Mary Lyon was starting her famous school for girls at South Hadley, President Hitchcock of Amherst proposed she should call it "The Pangynaskian Seminary"; but she, wiser than Noah Webster in this matter, did not accept the suggestion, although the meaning of the name — that the whole woman was to be put to school — was exceedingly appropriate.

For a score of years Webster's spelling-book bore the ponderous title conferred on it, and yet survived. Then he changed the name to *The American-Spelling-book*, and still later to *The Elementary Spelling-book*. From almost the very first it took the leading place among books of its class and kept that place for many decades. Webster, in a general way, compiled his book on the plan of Dilworth's, the most popular English speller of the century; but radical divergencies were not lacking, for he aspired to reform the language and simplify the spelling. Hitherto the spelling in the different text-books had been far from uniform; and in letters, records, and other manuscripts of the time there was a curious variety in word construction. Even men of high education often spelled the same word in several different ways; but Webster presently became the American standard and brought order out of chaos. He did not accomplish all that he at first planned in the way of reform, but some of his innovations, like the treatment of *tion* and *sion* as single syllables instead of two, as had formerly been the custom, found permanent acceptance, and he did very effective work in counteracting vulgarisms in pronunciation.

When the first edition of the spelling-book was printed, Webster had to give a bond to make good any loss that might result, but the copyright was soon very valuable. Authors were in the habit of selling the printers the right to issue editions of their books for a certain number of years, and Webster sold his privilege to a firm in his home city, and to other firms in Boston, Albany, New York, and Philadelphia. Such a multiplication of publishers would hardly do now, but the old-time difficulties of transportation afforded these firms ample protection from rival encroachment. In 1817, when the speller was revised, one printer gave Webster three thousand dollars a year for his term of copyright, and another forty thousand for the privilege of publishing editions for fourteen years.

Each printer varied his issue in minor particulars to please his own fancy. One edition appeared "embellished" with a portrait of "The Father of his Country," another with a dreadful woodcut that purported to show the features of "Noah Webster, Jun. Esq.," but which made him look like a porcupine. This engraving and the absurd title of the book furnished vulnerable points of attack. Names like "Mr. Grammatical Institute," "Mr. Institutional Genius," and "Mr. Squire, Jun." were applied to the author, and one critic drew up a mock will, in which he bequeathed Webster "six Spanish-milled dollars, to be expended on a new plate of his portrait at the head of his spelling-book, that which graces it at present being so ugly it scares the children from their lessons; but this legacy is

to be paid only on condition that he leaves out the title of 'Squire at the bottom of said picture, which is extremely odious in an American school-book, and must inevitably tend to corrupt the principles of the republican babies that behold it."

Webster was a good deal disturbed by the criticisms passed on his book, and in replying to one which especially irritated him, he challenged the writer to "meet him in the field." But the offender chose to shed ink instead of blood, and the warfare was confined to the columns of the newspapers. Fortunately this sort of thing proved good advertising and brought the speller thoroughly into notice.

One of the first effects of the publication of the *Grammatical Institute* was to make spelling a craze. Previously spelling had been little taught, but now it absorbed a large share of the student interest and enthusiasm, and the pupil who could "spell down the whole school" ranked second only to him who surpassed the rest in arithmetic. The child at the head of a class when the day ended had a credit mark, and perhaps was given a written certificate of good scholarship to carry home. There were instances, too, where the spelling classes had prizes — possibly a half dollar for the oldest class, a quarter for the next, and a "nine-pence" for the little ones. Each prize coin was drilled and hung on a string, and the winners in the afternoon spelling lessons were entitled to carry a coin suspended from their necks until the next morning, when these decorations were turned over to the teacher to be again contended for. A record was kept, and at the close

The Portrait in "The Old Blue-back" that scared the Children.

of the term the child who had carried the coin home the greatest number of times was given permanent possession.

Once a week the school would choose sides for a spelling-match. This match took up half the afternoon and was frequently attended with efforts to defraud and exhibitions of envy. The side which spelled best was declared to have "beat" and usually manifested much triumph. The spelling-matches were also a common recreation of the winter evenings, and from time to time neighboring districts sent their champions to contend for orthographic honors in friendly combat. To these evening contests came not only the day pupils, but the older brothers and sisters and the rest of the community. Horace Greeley, when a tiny white-headed youngster of five or six years, had already become a famous speller, and had not an equal in his district. He was always the first one chosen at the spelling schools. Sometimes he fell asleep in his place before the evening was over and had to be nudged by his companions when his turn came. He would instantly be alert, spell his word, and then drop asleep again.

After the spelling came recitations of poetry, together with oratory and dialogues. The dialogues were inclined to buffoonery, but the oratory was entirely serious, though not infrequently it was high-flown to the point of grandiloquence. The speeches of the patriot leaders of the Revolution were always favorites, especially Patrick Henry's "Give me Liberty or Give me Death."

Until the *Grammatical Institute* became *The Elementary Spelling-book* in 1829, the usual binding consisted of a back of leather and sides of thin oaken boards pasted over with a dull blue paper. Blue paper of a somewhat brighter tint was used on the later editions, and the speller was often spoken of as "The Old Blue-back." Up to the time of the *Elementary*, the cover was entirely without lettering. The sheets were held together and fastened into the cover by means of two strands of tape that pierced the folds of paper a quarter inch from the back, and the book opened very stubbornly. In fact it could never be induced to be outspread flat unless the tape was severed. The paper was coarse, the ink poor, and the print varied from muddy blackness to a faint illegibility.

For the first two or three years that the children attended school, during the earlier decades of the Republic, Webster's speller was their chief text-book. Not only was it primer and spelling-book combined, but there was a formidable introduction containing an "Analysis of Sounds in the English Language," to be learned word for word. The Analysis begins with this definition:—

Language or speech is the utterance of articulate sounds or voices, rendered significant by usage, for the expression and communication of thoughts.

The rest of the explanations were in the same vein. Of course they failed to convey their meaning to the child mind, and the teacher offered no elucidation.

After the introduction there was a page devoted

to the alphabet. The letters, Roman and Italic, large and small, were arranged in several columns, and opposite each letter in a final column was the letter's name. Webster called *r*, *er*, and *w*, *oo*, while in addition to the usual name for *h*, he gives *he*, and for *y*, *ye*. Authorities differed in naming the letters. Hale's speller, 1799, names *w*, *ew*, and says in a footnote: "Two words or two syllables make an awkward name for a letter. *U* and *w* have the same sounds, and should have names as nearly alike as can be distinguished from each other."

A London speller of 1712 pronounced *w*, *wee*, and in another English speller *j* appears as *jee* or *jod*; still another colonial speller gives *j* as *iazh* and *z* as *zad* or *zed*.

In Webster's book the alphabet is succeeded by a page packed with "ab, eb, ib," and the rest of those meaningless word fragments. Then come three-letter words, and orthoepy is fairly begun. The long columns march on without a break over to page 43 where we find a few "lessons of easy words to teach children to read, and to know their duty." This first reading looks like poetry, yet when you test it, you discover it is a very prosaic prose. The opening paragraph is

No man may put off the law of God;
My joy is in his law all the day.
O may I not go in the way of sin!
Let me not go in the way of ill men.

Throughout the remainder of the book the reading breaks the spelling columns quite frequently.

The following selections will show how aptly the preface described the reading lessons when it said that they were planned "to combine, with the familiarity of objects, useful truth, and practical principles."

A good child will not lie, swear, nor steal. — He will be good at home, and ask to read his book; when he gets up he will wash his hands and face clean; he will comb his hair and make haste to school; he will not play by the way as bad boys do.

As for those boys and girls that mind not their books, and love not the church and school, but play with such as tell lies, curse, swear and steal, they will come to some bad end, and must be whipt till they mend their ways.

January begins the year, and the first day of that month is called New Year's day. Then people express to each other their good wishes, and little boys and girls expect gifts of little books, toys and plums.

There are five stages of human life, infancy, childhood, youth, manhood, and old age. The infant is helpless; he is nourished with milk — when he has teeth he begins to eat bread, meat, and fruit, and is very fond of cakes and plums. The little boy chuses some plaything that will make a noise, a hammer, a stick or a whip. The little girl loves her doll and learns to dress it. She chuses a closet for her baby-house, where she sets her doll in a little chair, by the side of a table, furnished with tea-cups as big as a thimble.

As soon as boys are large enough, they run away from home, grow fond of play, climb trees to rob birds' nests, tear their clothes, and when they come home their parents often chastise them. — O how the rod makes their legs smart. These are naughty boys, who love play better than their books.

One feature that appears rather queer in an elementary school-book is a lesson of "Precepts concerning the Social Relations." In this the "young man, seeking for a partner for life," is advised to "Be not in haste to marry," and the young women to—

Be cautious in listening to the addresses of men. Is thy suitor addicted to low vices? is he profane? is he a gambler? a tippler? a spendthrift? a haunter of taverns? and, above all, is he a scoffer at religion? — Banish such a man from thy presence, his heart is false, and his hand would lead thee to wretchedness and ruin.

Then for married people there are suggestions of this sort:—

Art thou a husband? Treat thy wife with tenderness; reprove her faults with gentleness.

Art thou a wife? Respect thy husband; oppose him not unreasonably, but yield thy will to his, and thou shalt be blest with peace and concord; study to make him respectable; hide his faults.

The reading which appealed most forcibly to the students who conned "The Old Blue-back" was undoubtedly a series of eight short fables, each with an illustration. One of the fables in particular made a profound impression, and no child ever forgot it or its picturesque telling. This was the story—

Of the Boy that stole APPLES.

AN old Man found a rude Boy upon one of his trees stealing Apples, and desired him to come down; but the young Sauce-box told him plainly he would not. Won't

you? said the old Man, then I will fetch you down; so he pulled up some tufts of Grass and threw at him; but this only made the Youngster laugh, to think the old Man should pretend to beat him down from the tree with grass only.

FABLE I.—Of the Boy that stole APPLES.

From a Webster's speller dated 1789.

Well, well, said the old Man, if neither words nor grass will do, I must try what virtue there is in Stones: so the old Man pelted him heartily with stones, which soon made the young Chap hasten down from the tree and beg the old Man's pardon.

MORAL

If good words and gentle means will not reclaim the wicked, they must be dealt with in a more severe manner.

The book ends with "A Moral Catechism" of about a dozen pages. The topics considered are "Of Humility, Of Mercy, Of Revenge, Of Industry," etc., and include such questions and answers as:—

Q. *Is pride commendable?*

A. By no means. A modest, self-approving opinion of our own good deeds is very right—it is natural—it is agreeable, and a spur to good actions. But we should not suffer our hearts to be blown up with pride; for pride brings upon us the ill-will of mankind, and displeasure of our Maker.

The Elementary Spelling-book, which appeared in 1829, had a frontispiece and seven pictures in the

FABLE II.—*The COUNTRY MAID and her MILK PAIL.*

From a Webster's speller dated 1789.

text. There was also an illustrated edition containing the identical material that was in the other except that every spelling page had a narrow cut added at the top. The lists of words in the *Elementary* were newly arranged and were more comprehensive than in its predecessors, but the most noticeable change

was in the reading matter. The Moral Catechism was omitted, and so were the scattered religious and

Frontispiece to Webster's Elementary, 1829.

ethical lessons. Four of the little fables were retained unaltered, but instead of the other four we

find "The Dog," "The Stag," and "The Squirrel" described, a paragraph to each. Then there was a half-page disquisition about time. The read-

"A Virago is a Turbulent, Masculine Woman."

From the illustrated edition of 1829.

ing otherwise consisted of short disconnected sentences containing as a rule wise advice, or statements of interesting facts. Nearly every page had

"An Orator makes Orations."

From the illustrated edition, 1829.

some of these sentences, and they numbered over a thousand in all. Below are selections from them, beginning with the shortest and simplest:—

an ox
is it so
I am to go in
He has got a new tub

The man can put on his wig
I love the young lady that shows me how to read.
Vipers are bad snakes, and they bite men.
I saw a rill run down the hill.

Visitors should not make their visits too long.

Style not in verse is called prose.

The birds fly from branch to branch on the trees and
clinch their claws fast to the limbs.

Wolves howl in the woods, in the night.

Never pester the little boys.

The lark will soar up in the sky to look at the sun.

Forks have two or three tines.

Shut the gate, and keep the hogs out of the yard.

The dysentery is a painful disease.

Our blood is often chilled at the recital of acts of cruelty.

When large hailstones fall on the house they make a
great racket.

Pompions are commonly called *pumpkins*.

The chewing of tobacco is a useless custom.

Many kings have been thrown down from their thrones.

The rainbow is a token that the world will not be
drowned again.

Christ is a mediator between an offended God and
offending man.

A piece of cloth, if good, is worth what it will bring.

Friday is just as lucky a day as any other.

It is a mean act to deface the figures on a mile stone.

The ladies adorn their heads and necks with tresses.

Fiction is a creature of the imagination.

It is every man's duty to bequeath to his children a rich
inheritance of pious precepts.

The love of whiskey has brought many a stout fellow
to the whipping-post.

Large bushy whiskers require a good deal of nursing and
training.

The little sentences make a curious medley, and are not at all childlike; yet they have a certain lively straightforwardness and are often picturesque and entertaining. They inculcate thrift, sobriety, and the other virtues, and considerable instruction is conveyed by them, though some of it is rather indigestible. All the editions of Webster's book from first to last have about them a certain crudity and primitiveness, but the book was suited to the times and regions when and where it most flourished. It did its work well, and it would have made Noah Webster's fame secure, had he produced nothing else. Its sway weakened first in New England, but its use continued to increase in the South and West until the Civil War began. Since then the sales have dwindled, yet there are schools where it is studied even at present, and "The Old Blue-back" stands unrivalled among American books in circulation and length of life.

The Bad Boy, as he appeared in the Illustrated Edition of 1829.

VIII

OTHER SPELLERS

JOHAN LOCKE, in 1690, said of elementary school education in England, "The method is to adhere to the ordinary road of the Horn-book, Primer, Psalter, Testament, and Bible; these are the only books used to engage the liking of children and tempt them to read." "The ordinary road" was the same here. There were three reading classes in the schools — "The Psalter Class" for beginners, next "The Testament Class," and thirdly "The Bible Class," which went through about two chapters at each school session and was expected to spell the words in the portions read. For a long time spelling-books were lacking, and they did not become common much before 1750; but after that time for fully three-quarters of a century the spelling-book was almost the sole resource of the school children for elementary instruction. Advanced readers were in the market in the early years of the republic, but readers for the beginners seem to have been thought unnecessary. Thus the spellers of the forefathers did double duty as spelling-books and primers, and were a much more important institution than they have ever been since.

During the years immediately preceding the Revolution, Dilworth's speller was accepted almost universally, but Noah Webster's book presently supplanted it. The next American speller to take the field was *The Child's Companion*, a small, thin volume compiled by Caleb Bingham. As compared with most of the early text-books, *The Child's Companion* was bright and attractive. Like all the

TABLE VI.

Easy Lessons, *consisting of Monosyllables, to be read without spelling.*

LESSON I.

MY child, love God with all thy heart.
 Let it be thy joy to do his will.
 O do not go in the way of sin!
 Turn thy feet from the road to death.

From Bingham's *The Child's Companion*.

older spellers, it contained fragments of rudimentary prose and verse, and every few pages the "Easy Lessons" for reading made a pause in the column of spelling words. The "Easy Lessons" consisted very largely of moral advice and reflections selected from the Bible, but in the latter part of the book were a number of fables and stories. Two of the stories follow:—

The PRETTY BUTTERFLY.

BUTTERFLY, pretty butterfly! come and rest on the flower that I hold in my hand! Whither goest thou, little simpleton? Seest thou not that hungry bird that watches thee? His beak is sharpened, and already open to devour thee. Come, come, then, hither, and he will not dare approach thee. I will not pull off thy wings, nor torment thee; no, no, no; thou art little and helpless, like myself. I only wish to look at thee nearer.

I will not keep thee long; I know thou hast not long to live. When the summer is over, thou wilt be no more, and as for me I shall only then be six years old.

Butterfly, pretty butterfly! come and rest on this flower that I hold in my hand! Thou hast not a moment to lose from enjoying this short life; but thou mayest feed and regale thyself all the time that I look at thee.

A DIALOGUE between Miss CHARLOTTE and Miss SOPHIA.

Charlotte. MISS Sophia, why do you always carry your *Spelling Book* to school with you? I carry nothing but my *work*.

Sophia. Because I mean to learn to *spell* as well as learn to *work*.

Char. I mean to learn to spell *too*. But what great matter is it if one is not always so very *exact* about one's spelling?

Soph. Why, if we don't spell our words a little according to custom, people will not be able to make sense of them.

Char. But mamma says if they do but know what we *mean*, that is enough. She says, I may as well begin *pin-*

cushion with the *last* letter, and end it with the *first*, as any way, if I am but understood.

Soph. That is the very thing. If you should begin it with an *n*, and end it with a *p*, you would be more likely to make *night cap* of it than *pincushion*; and that would be a bad mistake.

Char. Well now, I will tell you a little affair, if you will promise to keep it a *secret*.

Soph. You know I never reveal *secrets*.

Char. Last New Year's day, I wanted to make my cousin Sally Chapman a present of a pretty little history book. And so I wrote her name in it and sent it. But, instead of writing it properly, I wrote *For Sale Cheap Mon*. My cousin opened it, and read it; but could make nothing more or less of it, than *For sale cheap for Money*; and immediately sent back to know the lowest price. Now, think how mortified I was.

Soph. We must expect that such mistakes will often happen, if we do not learn to spell in season. I knew a man who had a great deal of money, and was about making a great feast, who sent his servant to market with an order, the true meaning of which was, that he wanted a dozen of fowls, either ducks, turkies, or chickens. But it was written thus: "Send me a *dose of fools* — *Dukes* will be preferred to *Turks*; but *Chittens* will be better than either." Guess the man's astonishment, at seeing his servant come home lugging a basket full of *kittens*!

Char. I see that great mistakes, and great injuries may arise from bad spelling. I am resolved to learn to be a good speller too; and will ask mamma to let me carry my spelling book to school every day.

Soph. I am glad you have come to that resolution. You write a very handsome hand; and nothing looks more shameful than to see *good writing* and *bad spelling* together.

What philosophers the school-book children of that generation were—and how quickly the virtuous and industrious won over their less admirable mates! In this dialogue between the two “Miffes” the glimpse we get of Charlotte’s mother mirrors the general opinion of the times that it was hardly worth while to teach girls much except sewing and housework, and if they took their stitching to school, it did not matter if they left their spellers at home.

In the back part of Bingham’s book is a “collection of vulgarisms” of which the author says that many more examples might have been added. I select rather freely, for the list gives an interesting impression of the language in everyday use. It fills twelve pages under this heading:—

APPENDIX.

The same subject is continued in sentence form, thus:—

I *gin* it to him.

I *dun* it myself.

He is the *most* wisest man.

He *teached* a school.

My *wives* fister is sick.

She *enjoys* a bad state of health.

He *rid* and I walked.

Is your parents living?

I have *nary* one.
She speaks very *proper*.
He *don't ought* to behave so.
What *does* I do but *goes* and *demands* the money.
I never *drink'd* better wine.
She died *of* a Tuesday.
About a year *agone*.

A speller very similar in size and makeup to Bingham's was "*The Child's Spelling-book: calculated to render Reading Completely Easy to Little Children; Compiled by a printer, Hartford, 1798.*" It is illustrated with a number of pictures and the text is unfailingly brisk and entertaining. The first reading starts off in this wise:—

Come hither, Charles, come, tell me your letters; do you know how many there are? Where is the pin to point with? Here is the pin. Now read your book.

In the next extract we get more glimpses of old-time child life both at school and at home.

How cold it is! Where are the little girls and boys? Have they not yet come from school?

Here they come, here they come. — Who was at the head of the class to-day? Rachel. And did she get the bow? Yes papa, here is the pretty bow. And will papa give me a penny for bringing home the bow?

Yes, Rachel shall have a penny. No, pennies are out of date. She shall have a cent.

Dinner is ready. Come little frozen boys, come get some pudding.

Will mamma give Charles some beer? Yes, Charles shall have some beer.

Wipe your mouth before you drink. Do not cough in the cup.

Thomas shall I help you to a potato? No, sir, I have dined.

Then go to the scullery, and wash your hands, your face, and your teeth.

* * * * *

This is winter. Well never mind it. We will sit by the fire, and read, and tell stories, and look at pictures.

Take care, little boy, you stand too near the fire. You will burn your shoes.

Do not spit on the floor. Spit in the corner.

It is dark. Light the candle. Shut the window-blinds. Bring in some wood.

The fun is gone to bed. The chickens are gone to bed; and little boys and girls must go to bed.

Poor little boy is sleepy. He must be carried upstairs.

Pull off his shoes. Pull off his frock and petticoat. Put on his nightcap.

Lay his head upon the pillow. Cover him up. Good night.

In 1799 appeared Caleb Alexander's *The Young Ladies' and Gentleman's Spelling Book*. It was a well-printed, leather-bound twelve mo, and contained eight engravings, each illustrating a poem by that eminent divine, Isaac Watts, whose verse both for adults and children was the especial delight of New Englanders in the eighteenth century.

These illustrated poems were the book's most distinguished feature as can be imagined from the pictures and portions of text which follow:—

Against PRIDE in CLOTHES.

From Alexander's Spelling Book, 1799.

HOW proud we are! how fond to shew
Our clothes, and call them rich and new!
When the poor sheep and filkworm wore
That very clothing long before.

The tulip and the butterfly
Appear in gayer coats than I:
Let me be drest fine as I will,
Flies, worms, and flowers exceed me still.

Then will I set my heart to find
Inward adornings of the mind;
Knowledge and virtue, truth and grace,
These are the robes of richest drefs.

No more shall worms with me compare;
This is the raiment Angels wear;
It takes no spot, but still refines;
The more 'tis worn the more it shines.

Against EVIL COMPANY.

From Alexander's Spelling Book.

WHY should I join with them in play,
In whom I've no delight;
Who curse and swear, but never pray.
Who call ill names, and fight?

I hate to hear a wanton song;
The words offend my ears;
I should not dare defile my tongue
With language such as theirs.

My God, I hate to walk or dwell
With sinful children here;
Then let me not be sent to hell,
Where none but finners are.

THIS is the day when Christ arose
So early from the dead;
Why should I keep my eyelids clos'd,
And waste my hours in bed?

Today with pleasure christians meet,
To pray, and hear thy word;
And I will go with cheerful feet
To learn thy will, O Lord.

I'll leave my sport and read and pray,
And so prepare for heaven;
O may I love this blessed day,
The best of all the seven.

For the LORD'S DAY MORNING.

From Alexander's Spelling Book.

The Columbian Spelling Book, Wrentham, Massachusetts, 1799, was similar to Alexander's in size, but was more roughly made, and the cuts were marvels of crudity. Two of these queer engravings are here given with the fables they illustrated.

The Dove and the Bee.

A POOR Bee came to a brook to drink, but in her haste she fell in, and would have lost her life, had it not been for a dove, who broke off a small twig from a

tree, and dropped it in, so that the bee got on the top of it, and rode safe to shore.

In a few days time a man came with his gun, and would have shot the kind dove; but the bee, who was close by, saw what he was at, flew to him, and stung him on his hand.

The Dove and the Bee.

From *The Columbian Spelling Book*, 1799.

“For now, thought the bee is my time, and I will save my friend, if I die for it.” As soon as the man felt the sting, he made a start, and the good dove flew off, and got safe to her nest.

MORAL.

Learn from hence to help those who are in need as much as you can.

The Old Knight and his Wig.

A CERTAIN Knight growing old, his hair fell off so fast, that he soon became bald; and so he was forced to buy a wig. But one day, as he was riding out a hunting

with some of his mates, they met with a sudden blast of wind; and so off fell his hat and wig. Those who were with him could not help laughing at the odd figure he made; and for his part, being a cheerful old blade, he laughed as loud as the best of them. How could I expect said he to keep the hair of other people on my head, when my own would not stay on?

The Old Knight and his Wig.

From *The Columbian Spelling Book*.

MORAL.

The best way to turn off the edge of a joke is to join in the laugh yourself.

A spelling-book with a title suggesting relationship to the one of which I have just been speaking was *The Columbian Primer* by H. Mann, Dedham, 1802. It was a small book of eighty-four pages, quite

Cc Stands for Camel, who lives in the east ;

attractive typographically and containing many pictures. The author thought the pictures would make the lessons “a *pleasure* rather than a *task*,” and that the teacher would rejoice “in the satisfaction of seeing the animated looks and rapid progress of his pupils.” Most of the pictures were used in illustrating a rhymed alphabet that began with:—

Aa Stands for ADAM, the first of our race ;
Bb Stands for his BRIDE, with beauty & grace.

Dd Stands for Drunkard, a worse looking beast.

An Alphabet Rhyme.

From *The Columbian Primer*, 1802.

Qq Stands for a Queen, who looks very gay ;

Each line has its accompanying picture filling the upper third of a page, and the rest of the space is devoted to spelling columns. The spelling is scarcely interrupted until we get to the last twenty pages which are made up of "Lessons in Reading." Nearly half this final portion is occupied by a story called :—

The Little Wanderers.

IT was one of those fine days of summer, when all nature smiled with the season, and seemed to invite

Rr Stands for Robin, who sings on the spray.

An Alphabet Rhyme.

From *The Columbian Primer*, 1802.

every one abroad to feast among the great variety of beauties it afforded; when young *Edwin*, about four years old, and his little sister *Eliza*, aged three, rambled off into the woods and could not find the way back.

We must now conclude, that young *Edwin* and *Eliza* were filled with much fear and amazement. We may suppose they recollected the many frightful stories they had heard of huge, wild beasts and serpents which frequent these abodes of solitude.

THE LITTLE WANDERERS.

From *The Columbian Primer*.

At length there was a thunderstorm of such violence that—

the whole forest, at times, seemed on fire, and tumbling into ruins. *Eliza* clung round her little brother, and tried to hide her face from the lightning, which every moment threatened to strike them lifeless.

Behold, now, the sable curtains of the night shrouding these unhappy innocents in the midst of this desolate forest! Here was no mother to cherish, and prepare for them a

wholesome supper. And instead of the downy bed, and the soft song of the Whippoorwill and Nightingale to lull them to repose, naught, but a bed of leaves drenched with rain, the wild wind which whistled terror thro' the trees, and the hoarse note of the Owl, to frighten their ears!

Meanwhile, the father and all the neighbors had been searching for the children, and the search continued unsuccessfully through the stormy night. "At last, when the day had dawned, the father happening to cast his eyes on a cluster of leaves—who should he discover but his sweet babes! He sprang to fold their cold bodies to his bosom: And while he wiped the rain from their tender limbs, the parental tear ran down his cheeks."

The mother and a daughter some years older than the lost children were with the father. Of this older daughter the book says: "How could that humane, delicate bosom, which always turned from the cruel scene where the lamb is led to the slaughter; whose soft hands could never indulge themselves in the barbarous sport of depriving the robin of her eggs, much less of her young nestlings; I say, how could this amiable sister endure the thought that her little brother and sister should thus perish."

But she was spared the pain; for while the rescuers picked up the children and "were alternately pressing their clay-cold lips to their own, a small breath was discovered to proceed from their mouths, and their little hearts faintly vibrated with life," and shortly they recovered and the adventure ended happily.

About a dozen years after this *Columbian Primer* was published at Dedham, a speller of the same title and very similar appearance was issued in New York. The text and illustrations, however, were new, though arranged just as in the earlier volume; but where the spelling pages of the Dedham book had single cuts at the top of each, the New York book had two. Beneath the pictures were jingling couplets such as : —

The blushing Flowers
bloom and spring,

Dick and Tommy go
to plough

The pretty Maids have
modest looks,

The Birds do in the
bushes sing.

And Caty milks the
brindled cow.

Good boys and girls will
learn their books.

The naughty Boy who
steals the pears,

Is whipt, as well as he
who swears.

The Captain boldly
draws his sword,

The Soldier marches
at his word.

Rhymes from *The Columbian Primer, or Ladder to Learning*, New York, 1827.

In the portion of a page given herewith from Fiske's *The New England Spelling-book*, Brookfield, Massachusetts, 1803, it seems a little odd to find

**WORDS frequently used in SPEAKING and WRIT-
ING, which should be well learned by every
Scholar.**

AXE	bright	Damn	fraud
âught	broâd	dâwn	frâught
Bâdge	brōgue	dēad	frēight
bāize	brūi se	dēarth	frīeze
bâ/k	būdge	dēign	frīght
bâ/m	buōy	dēw	frūit
bā,the	buŷ	dīrge	Gāit
bâwd	Câlve	dōe	gāol

Portion of a Page.

From Fiske's *New England Spelling-book*, 1803.

"Damn" included among the "words which should be well learned by every Scholar." But words just as much out of place are not uncommon in the old spellers. To quote a text-book preface of 1828, "They contain words collected from all departments of nature, life, and action; from the nursery, the kitchen, the drawing-room, the stable, the bar-room, the gaming table, the seaman's wharf, the apothecary's shop; from the subtle pages of the metaphysician, and the rhapsodies of the pompous pedant."

The latter part of Fiske's speller, comprising the larger half, consists of the Constitution of the United States, the Declaration of Independence, the Consti-

tution of Massachusetts, and Washington's Farewell Address. But preceding these profundities are a few short reading lessons of a more entertaining character including two "Moral Tales" which each have an illustration, the only pictures in the book. One of the tales was about —

M O R A L T A L E S .

The CHILD and the SERPENT.

From Fiske's The New England Spelling-book.

A CHILD, playing with a tame serpent, said to it, My dear little animal, dost thou imagine I would be so familiar with thee if thy venom was not taken out; you serpents are the most perverse, ungrateful creatures. I remember to have read, that a good natured countryman found

a serpent under a hedge, almost dead with cold. He took it up and warmed it in his breast; but it was scarcely come to life when it stung its benefactor, and the too charitable peasant died of the wound. This is astonishing said the serpent: How partial are your historians! Ours relate this history in a different manner. Your charitable peasant believed the serpent dead: Its skin was beautifully variegated with different colours; he took it up and was hastening home in order to flay it.

Now tell me whether the serpent was ungrateful?

Hold your tongue, replied the boy. Where is the ingrate who cannot find some excuse to justify himself?

Well answered, interrupted the boy's father, who had listened to the dialogue. Nevertheless, my son, if ever thou shouldest hear of an instance of ingratitude baser than ordinary, forget not to examine every circumstance to the bottom, and be extremely backward in fixing so foul a stain on any man's character.

Comly's *A New Spelling-book*, Philadelphia, 1806, has on nearly every page a few short paragraphs of reading in addition to the columns of words. The first of this reading starts off lugubriously with — "All of us, my son, are to die," and the tone of the reading lessons right through the book is very serious. If there is a pause for a bit of natural history about "The Wren," "The Camel," or some other creature, it is only momentary, and the text promptly reverts to its pedantic and melancholy moralizing, often with a touch of theology added. Here is one of the longer lessons: —

Joseph Harris, a child of eleven years old, during his last illness, gave the following advice to his sister. Dost

thou know that it is thy duty to pray to the Lord every night, to return him thanks for his preservation through the day, and to desire his protection through the night; also, in the morning to return thanks to him for relieving thee from darkness.

When thou sittest down to meals, recollect how many there are that would be glad of the smallest morsel, while thou hast full and plenty: return the Almighty thanks for his bounty, and be good to the poor.

Mind the advice of thy uncles, aunts, and friends. Love every body; even thine enemies. Endeavour to assist thy poor afflicted mother, who is struggling through the world, with four children without a father, and her fifth going to be taken from her. Love thy little brother and sister, and walk in the paths of truth, and the Almighty will be a father to thee.

Among spellers of British origin Dilworth's, Fennings', Murray's, and Perry's long continued in circulation, but in the early years of the nineteenth century Perry's was by far the most popular. It was entitled *The Only Sure Guide to the English Tongue*, although one would have difficulty in perceiving wherein it was essentially better than some of its contemporaries. The thing in Perry's book which most impressed those who studied it was the frontispiece — a tree of learning. This was growing in a schoolyard, and groups of boys were playing in its shadow. A ladder reached from the ground up into the branches, and several boys were ascending with open books in their hands. Another book boy had stepped off the ladder into the tree and was preparing to climb higher, while three boys engrossed

in their books were perched among the loftiest branches. To the average child this picture allegory was very curious and incomprehensible.

The reading in Perry is decidedly moral and religious; but once in a while it reverts to such light-some matter as the following:—

COME let us go forth into the fields; let us see how the flowers spring; let us listen to the warbling of the birds, and sport ourselves upon the new grass.

Toward the end of the book are several pages of hymns, a number of illustrated fables, a chapter on Manners, the Ten Commandments, and a morning and evening prayer. Nearly all the old spellers included material of this sort. I give two of the fables:—

The naughty GIRL reformed.

From an 1803 edition of Perry's *The Only Sure Guide to the English Tongue*.

A CERTAIN little girl used to be very naughty; she frequently strayed away from home without the consent of her parents; was often quarrelsome and was sometimes so very wicked as to tell lies. One day she went into an orchard, and, without leave, took some fruit and was carrying it off. A faithful dog observed her and pursued her, and would have bitten her, if a countryman had not at that instant been passing who very humanely rescued her from the jaws of the furious animal. The danger she was in caused her to reflect on her past bad conduct — she repented of her folly, and became one of the best children in the neighbourhood.

The Complaisant Hermit.
From Perry's *Only Sure Guide*, 1818.

The Hermit.

A HERMIT, one morning, sat contemplating with pleasure on the various objects that lay before him. The woods were dressed in the brightest verdure; the birds carolled beneath the branches; the lambs frolicked around the meads; and the ships driven by gentle gales, were return-

ing into their proper harbours. In short, every object yielded a display either of *beauty* or of *happiness*. On a sudden arose a violent storm. The winds mustered all their fury, and whole forests of oak lay scattered on the ground. Darkness instantly succeeded; hailstones and rain were poured forth in cataracts; and lightning and thunder added horror to the gloom. And, now, the sea, piled up in mountains, bore aloft the largest vessels, while the horrid uproar of its waves drowned the shrieks of the wretched mariners. When the whole tempest had exhausted its fury, it was instantly followed by the shock of an earthquake.

The poor inhabitants of a neighbouring village flocked in crowds to our hermit's cave, religiously hoping that his well known sanctity would protect them in their distress. They were, however, not a little surprised at the profound tranquillity that appeared in his countenance. "My friends," said he, "be not dismayed. Terrible to me, as well as to you, would have been the war of the elements we have just beheld, but that I have meditated with so much attention on the various works of *Providence*, as to be persuaded that his *goodness* is equal to his power.

The old-time school-book authors often attained a good deal of picturesqueness in the selections that went into their volumes, and some of these authors were hardly less picturesque in the arguments and opinions they addressed to the public in their prefaces. Here is the way Joshua Bradley appeals for the acceptance of his "lessons in spellings" which he compiled in a square little volume of sixty-four pages, published at Windsor, Vermont, in 1815.

The author was led to lay this small work before the publick, for the benefit of beginners; who are apt to wear

out a large book, without gaining any more knowledge than they would from one of this description.

Should parents, instructors and the benevolent encourage the introduction and continuance of this little work among children, they may be instrumental in guiding millions to a true knowledge of the rudiments of our language and *receive their reward at the resurrection of the just.*

To such patrons of learning the author wishes to tender his unfeigned thanks and to subscribe himself their sincere and affectionate friend.

The Wolf accuses the Lamb of Muddying the Water.

From Perry's *Only Sure Guide*, 1818.

An equally quotable preface is found in the *Analytical Spelling Book* by John Franklin Jones, New York, 1823. The compiler says of the reading matter in his book that—

Something was wanted, in American schools to replace the lessons, which have been copied from book to book, since the reign of Queen Anne. It is the intention, in the

present work to advance principles suited to the rising generation, in the United States. Beast, reptiles and insects are not represented in this volume, as the equals of rational beings; because such a supposition is repugnant to nature, science, and correct moral sentiment. Most of the fables so long employed in schools, are particularly improper for small children, who should be taught by literal examples, before they can comprehend figures of rhetoric or draw inferences from remote hints. The fancy of converting inferior animals into "*teachers of children*," has been carried to ridiculous extravagance.

Thus he throws Æsop overboard. Here is a lesson to show what Mr. Jones could do in the way of "penning readings": —

Keep clear of the boy that tells lies, for he is a bad boy.

O how I like to read my book, and be a good child, and mind what my pa and ma tell me!

Let the best child in school have a good ripe red peach, and five blue plums, and ten grapes, and a nice new book.

Pinks smell sweet.
Good girls are neat.
A leech sucks blood.
Ducks play in mud.

The great feature of the speller is the "Story of Jack Halyard," which fills thirty closely printed pages. Jack lived on a New Jersey farm. He was nine years of age, and had an older brother Charles and two younger sisters Mary and Betsey. His father was "very honest," and his mother —

was a woman of engaging manners, and unblemished character. Jack's teacher, Mr. Clement, was very fond of him, and used to call him little General Washington, because he acted with so much honor and manliness. Jack scorned the vile mischief that low bred fellows sometimes practice, and which they seem to think very cunning.

If he saw a silly fellow skulk behind a bench, or behind another boy, to do some sly trick, while the teacher was looking the other way, he would say, when they went out, that bad scholars took more pains to be dunces than would be needed to become men of talents.

Jack's little sisters were charming girls, very fond of learning; and, when he came home, he would find pretty stories for Mary to read, and teach Betsey in her a b abs. He always treated his mother and sisters with great attention, and was very polite to other ladies of his acquaintance.

The story goes on to say that "Jack's conduct began to attract notice in the town where he lived." Major Wilson, "a gentleman of distinction," whose house was about four miles distant from Mr. Halyard's, had a ten-year-old son, named Peter, "and Peter was inclined to be idle and childish." When other boys were sliding and skating, Peter would sit moping indoors. One day the lads were asking among themselves where Peter was, and Solomon Belmot said, "Oh, he is sitting in the corner to keep the cat from eating the tongs. That is all he is good for; the ninny is too lazy even to play."

Major Wilson was mortified, at having such a shameful lubber of a son. He thought of Jack Halyard, and concluded the best thing he could do, would be to get so smart a boy to come and live a while with his son.

Jack's father agreed, and during the five weeks Jack stayed, "Peter was so altered, he hardly appeared to be the same boy." Among other things Jack cured his companion of timidity. It is told that—

One day as they were in a pasture together, Peter was scared almost to death, at the sight of a rattle snake. He ran and screamed, as if the terrible creature was going to swallow him alive; but Jack like a hero, without being at all afraid, got a good stick and killed the snake. "These animals," said Jack, "are like tattling, mischief making people: they are very poison; but dangerous only when they creep in secret, and bite before they are seen."

Jack talked much and very sensible with Peter, and Major Wilson was so much pleased with the change in his son, that he said Jack Halyard was worth five times his weight in gold, and he made him a present of a likely colt. "My good little friend," said the major to Jack, and he almost shed tears while he said it, "the great happiness of parents is in seeing their children do well. If Peter should ever make an honorable man, it will be in part owing to what you have done for him. Take this colt. I hope, my dear fellow, you may live to ride him to congress."

Jack led him home and felt as rich as King Cre-sus. The colt was all over as black as a mink; but the hired man was a queer fellow, and he named this black colt *Snow-ball*.

The best people in this world are not perfect; and Jack, though so excellent a boy, committed some great errors. The first disgraceful thing he did, was when he was about five years old. He got to a bottle of rum, very sily, and tasted a little; at first it made his mouth smart, and his nose tingle. He soon got over this, and thought it would be a pretty notion to take another dram: but he found that this was very poor business. Several children have killed themselves by drinking ardent spirits in this way. Jack

was not dead drunk, but tipsey. He staggered off like a crazy fellow, nearly half a mile from the house; said some most ridiculous, vulgar, silly things; and was saucy to an old man. He even abused his mother after he had been

**The Smart Boy,* leading home his
Black Colt Snowball.**

From Jones's *Analytical Spelling-book*, 1823.

carried sick, to the house, and put on the truckle bed; but at last he grew stupid and went to sleep.

Mr. Halyard, the next day, called his tippling son, and asked him what he had been about. Jack was still weak, and so much ashamed, that he hardly dared to look his

father in the face. He clasped his arm around his pa's leg, and hung down his head. But though this little boy had done wrong he despised a falsehood. He told the facts as nigh as he could remember, without any quibbling. Jack's father was so glad to find him honest in owning his fault that he did not say a harsh word.

Jack had turns of the colic, especially, if he eat unripe fruit; but he bore these things like a young philosopher, and felt above the silly whining, that is sometimes heard among children. The whooping cough, he passed lightly through, and considered it hardly worth minding; but he found the measles much more serious, and at one time rather forgetting himself was somewhat peevish.

The narrative continues to tell of Jack's cleverness and the increasing honors he won through five chapters. "But there is no lasting happiness here below," it says, and the final pages record that Mr. Halyard had his best horse stolen and that he was to an expense of "above sixty dollars in chasing the thief, and getting back the horse." Soon afterward a flood drowned five of his cattle and a number of his sheep, his crops were much damaged, and he himself was "taken extremely sick with a bilious fever" and died. His dying precepts fittingly close the story.

One would fancy there could not be another youth with the perfections of Jack Halyard; yet that this impression is a mistake is shown by the tale below, which is also taken from Jones's speller.

THE LITTLE SAWYER, FRANK LUCAS.

Mrs. Corbon kept a village school in the state of New-York. She had a noble mind and was a friend to all good

children. One cold morning in the winter, a small boy came along, with a saw on his arm, and wanted this lady to hire him to saw wood. She said, one of her neighbors would like to saw the wood and she did not wish to hire any body else. "O dear," said the boy, "what shall I do? My father is blind, mother is sick, and I left my sister crying at home, for fear poor ma will die. I take care of them, as well as I can, but they have nothing to eat." Mrs. Corbon had never seen this lad before; but she perceived he was a boy of uncommon goodness. He shivered very much with the cold; for he was but thinly drest, and his ear locks were white with frost. The lady asked him to come in and warm himself. Are you not hungry, said Mrs. Corbon? Not much ma'am. I had some potatoe for dinner yesterday. Did you not have supper last night? No ma'am. Nor breakfast, this morning? "Not yet: but no matter: I shall get some by and by. If I try to do well, God will protect me: for so my precious mother says. I believe she is the best woman in the world. If I did not think she was, I would not say so." "You are a brave lad," said the lady. "I will be your friend, if you have not another on earth;" and the tears sparkled in her eyes as she gave him a biscuit with a piece of meat, on a small plate. Thank you, ma'am, said Frank; if you please, I will keep them to carry home. Don't you think, ma'am, that any body will hire me to saw wood? Yes, my dear little fellow, she answered, I will give you money to saw mine. He thanked her again, and ran to the wood pile to begin his work. The lady put on her cloak and went out among her neighbors. She told them Frank was one of the best boys she had ever seen, and hoped they would do something to help the little fellow provide for the family. So they came to her house, where he was, and one gave him a six cent piece, another a shilling, and a third twenty-five cents, till they made up nearly three dollars. They pre-

sented him a loaf of bread, part of a cheese, some meat and cake, a jug of milk, and some apples; with a snug basket to put them all in: so that he had as much as he could carry. He told them he was very much obliged; but he chose to work and pay for what he had if they would

The Little Sawyer.

From Jones's *Analytical Spelling Book*.

let him. They said he might see to that another time. We are going, said Mrs. Corbon, to send the things to your mother. Frank hurried back, tugging his load, and the whole family cried for joy. Bless your dear heart, said his poor blind father; come here and let me get hold of you.

My dear wife, a blessing has come upon us all for the sake of our dutiful child. He is one of nature's noblemen. The good man raised his hands in prayer, and thanked the Creator of the world for giving him so hopeful a son.

It is thirty years since this affair happened, and the same Frank Lucas is now a judge, and one of the first men in the county where he lives. His father is at rest. Twenty summers, the bell-flower has bloomed, on his peaceful grave. His mother has grown very old and feeble. She still lives with her son. Judge Lucas is married to a charming lady, and has five children. They go to school; and their father tells them they must love God; honor their parents and teachers, and be kind to all; and that the way for a poor little boy to become a great and happy man, is, to be honest, industrious and good.

A poem from Picket's *Juvenile Spelling-book*, New York, 1823.

The Lamb.

A tear bedews my Delia's eye,
 To think yon playful lamb must die :
 From crystal spring and flow'ry mead
 Must in his prime of life recede ;
 Erewhile in sportive circle, round
 She saw him wheel, and frisk and bound ;
 From rock to rock pursue his way,
 And on the fearful margin play.
 She tells with what delight he stood
 To trace his features in the flood ;
 Then skipp'd aloof with quaint amaze ;
 And then drew near again to gaze.
 She tells me how with eager speed
 He flew to hear my vocal reed ;

And how with critic face profound,
And steadfast ear, devour'd the sound.
His every frolic light as air,
Deserves the gentle Delia's care ;
And tears bedew my Delia's eye,
To think yon playful lamb must die.

The Danger of Temptation.

THE silly fish, while playing in the brook,
Hath gorg'd and swallow'd the destructive hook ;
In vain he flounces on the quiv'ring hair,
Drawn panting forth to breathe the upper air ;
Caught by his folly in the glitt'ring bait,
He meets his ruin and submits to fate.

Moral.

Avoid base bribes : the tempting lure display'd,
If once you seize, you perish self-betray'd.
Be slow to take when strangers haste to give,
Lest of your ruin you the price receive.

A Poetical Fable.

From Picket's *Juvenile Spelling-book*, 1823.

Owl.

Owls eat mice,
and live in the
woods.

*A Fragment from The New
York Spelling-book, 1823.*

Bolles's Spelling-book, New London, 1831, is given an odd individuality by the fact that "each page is embellished by select proverbs and maxims." These bits of wisdom are printed in small type on the borders of the pages, one at the top, one at the bottom, and one on each side. There is a comparatively large amount of other reading matter, and frequent illustrations. The longest story in the book is about —

ALMIRA AND JANE.

Almira was a very thoughtful girl; she took delight in viewing the beauties of nature; and for this purpose, often took a walk near the close of the day.

On her return, one evening she was accosted by Jane, who, though younger than herself, was always pleased with Almira's company, and requested the pleasure of walking with her the next day.

Jane informed her mother of what had passed; and made request, that she and her little brother, might join Almira in her ramble.

Her Mamma was very willing, and said, as she was about to go; Do not forget, my child that it is God, who permits you to enjoy so many pleasures.

By this time Almira had arrived and Jane and George were ready to go with her.

Almira and Jane soon began to converse, and little George listened with attention.

How pleasant it is, said Jane, to see the earth decked so

gaily; the grass so fresh and green, and do see the little lambs yonder¹

Al. O yes; emblems of innocence; how sweetly they play; the musick of the birds also affords me much pleasure. Indeed I sometimes rise very early to hear them; but I do not say right, I rise because their sweet notes seem to say; Awake, and give thanks too. The same God that made them, and teaches them to sing, made us, and takes care of us.

Ja. And bestows on us many blessings which they never knew.

Geo. But how can you say so; sister? I think the birds are very happy, and sometimes wish, that, like them, I could skip from bough to bough.

Ja. Why, George, they know very little; they were never taught to read, as we have been.

Al. Nor did they ever hear of heaven; but we, if we love the Lord, and obey him, may hope to be happy here, and happy in the world to come.

Geo. Now I see the folly of my wishes; I think I shall never, again, desire to be a bird; I would much rather learn to read, and become wise.

Ja. Have we not yet arrived at the extent of your walk; Almira?

Al. Yes; on the banks of this little rivulet I admire to sit among the shrubs, or under the shade of some of the willows.

Ja. George, I believe, is delighted by looking into the the brook; what do you see, George?

Geo. Some frogs, and a great many little fishes. But they are so shy, and nimble, that, before I can touch them they dart away.

As they walked along the side of the stream Jane began to be very pensive:

I have been thinking, said she, that the God who made,

and takes care of all these things, must be very great, and very good.

Al. He is so, indeed ; he is worthy of all our praise.

Ja. If he makes this earth so pleasant, what must heaven be ?

Al. What does the word of God say ? Eye hath not seen ; neither has it entered into the heart of man, to conceive the glory, that shall be revealed in that world. O may we meet in heaven ; we shall then be happy indeed.

The evening drew on, and they returned home ; little George being so well pleased, that he related the whole story to his papa.

The several lessons following the above are philosophies on life and nature that in manner of expression are reminiscent of the Psalms in the Bible. I quote one of them : —

They that go down to the sea in ships, that do business in the great waters ; these see the work of the Lord, and his wonders in the deep.

For he commandeth, and raiseth the stormy wind, which lifteth up the waves thereof.

They mount up to the heaven ; they go down again to the depths ; their soul is melted because of trouble.

They reel to and fro, and stagger like a drunken man, and are at their wits' end.

Then they cry unto the Lord and he bringeth them out of their distress.

He maketh the storm a calm, so that the waves are still.

Then are they glad because they be quiet : so he bringeth them to their desired haven.

Here is a sample of the verse contained in the book : —

THE ORPHAN.

My father and mother are dead,
No friend or relation I have;
And now the cold earth is their bed,
And daisies grow over their grave.

I cast my eyes into the tomb
The sight made me bitterly cry;
I said, and is this the dark room,
Where my father and mother must lie?

I cast my eyes round me again,
In hopes some protector to see;
Alas! but the search was in vain,
For none had compassion on me.

I cast my eyes up to the sky,
I groan'd, though I said not a word;
Yet God was not deaf to my cry;
The friend of the fatherless heard.

O yes — and he graciously smil'd
And bid me on him to depend;
He whisper'd — “Fear not, little child,
For I am thy father and friend.”

One lesson of an unusual sort was three pages of information on various subjects under the title “Common Things,” and I reprint several paragraphs.

The rainbow is formed by the reflection and decomposition of the sun's rays on the drops of falling water.

Electricity is a subtle fluid which pervades most bodies and is capable by certain operations, of being accumulated in certain substances to a greater or less degree.

Ignis Fatuus is a light supposed to be of a phosphorick nature, frequently seen in mines, marshy places, and stagnant water; from its resemblance to a candle in a lantern it has been vulgarly called, Jack with a lantern, or Will with a wisp. People have sometimes been misled by following these lights.

*Man and Horse.**Mad Bull.*

A Horse drinking. Boy in danger.

Children should be careful not to provoke a bull, or get over into the field where one is. Alas! for that little boy that is running with all his might: see his hat flying behind him, and the mad bull close at his heels.

Part of a Page.

From *The New York Spelling-book*.

The two short reading lessons below are from *The Young Tyro's Instructor*, "comprising all that is really useful in a spelling-book to instruct a child in his native tongue." New York, 1834.

A pig can eat a fig.

A cat can eat a rat.

A fly sat on a pie.

A bee sat on a pea.

Boys must learn to spell, read, and write,
And try to learn with all their might;
Then they will be wise, good, and great,
And, in due time, may serve the state.

A Page.

From Parsons's *Analytical Spelling Book*, 1836.

Parsons's *Analytical Spelling Book*, Portland, Maine,
1836, was decidedly more attractive in its makeup

than most books of the period. It had a good deal of variety and sparkle, and the author in enumerating its virtues in his preface says that with it "Parents who have little skill in teaching can learn their children to read, where there are no schools, and adults with little assistance can learn by themselves." He does not begin the lessons with the alphabet as was usual in books of this sort. Instead, he requires the pupils "to learn letters only to make out definite words." The lessons start with a picture of a rat, and the author directs the teacher to "gather all the a, b, c, and a, b, ab scholars round him, and ask them, 'What is the first picture?' 'A rat,' say they. 'Well, here is his name under him. You are now to learn to read his name.'" Then they were drilled to recognize the three letters that formed the word.

On looking along through the book it is noticeable that the statements and questions in the lessons are often trivial and irrelevant, and the happy-go-lucky way in which several subjects are introduced and mixed up in the same lesson must have proved rather confusing to the youthful mind. For instance, this picture of a melancholy-looking mule

A Mule.

is accompanied by the remarks that —

Mules are good to pull.

Mules are mute.

They make no noise.

Use the mule well.

A-buse no man.
Give to all their due.

At the end it is uncertain whether the mule is a man, or the man mentioned is a mule.

Of the next picture we are told "The pail has a wire bail," though it is perfectly plain that the bail is wooden.

Here are several consecutive sentences under a picture of a hen. They seem to have some occult but not easily perceived connection.

A Pail.

Hens lay eggs
Sev-en eggs to a keg
Sev-en hens to a keg
Sev-en eggs to a hen

A Girl.

On page 9 is a picture of a girl with what looks like a flower in her hand; yet the text reads, "Ann and her fan," and it also asks, "Has Ann an ap-ple?" The same picture reappears on page 17; but meanwhile the girl has changed her name and the text says, "Let Jane tell her tale," and states that "Jane has a cape on her neck."

Then here is a picture from a little farther along in the book with the following sentences beneath it:

A toad in the grass.
Toads can hop far.
See his long hind legs.

Can he swell as large as a goat?
 How many toads would load a cart?
 Grass is mown with a scythe when it is grown.
 Pa groans with a pain in his arm.

Is it not perfectly plain that the "toad" in the

A Toad.

From Parsons's *Analytical Spelling Book*.

picture is a frog? What is the sense of asking if he can swell as large as a goat, or how many would fill a cart?—as if toads were in the habit of swelling monstrously and of being loaded into carts; and what is the matter with Pa? Has he been mowing, or

has he been loading toads, or what does cause his pain?

Turn a few more pages and we find a lesson that sounds as if it were intended for humor. I give several extracts:—

A smith can steel an axe by welding a strip of steel on the edge. The Bible says, "Thou shalt not steal."

You could be kind if you **would**.

Chairs are made of **wood**.

A dog will **scent** a fox.

James is **sent** away for laughing.

Girls **vail** their faces in the sun.

Brooks run through **vales**.

Hear the horse **neigh**.

One who lives near, is a **neigh**-bor.

Boys **need** dinner; girls **knead** dough.

The book conveys information about punctuation as follows : —

You see a little round dot, once in a while as you read. It means that you should let your voice fall, as if you were done read-ing, and stop while you could say, one, two, three, four. Thus : —

“ Lot is dead. One two three four. He died last night. One two three four. His mother, ^{one} his old mother is sick.” This little dot is called a pe-ri-od.

Large, larger, largest.

The top is large. The bell is larger. The ox is largest.

A Comparison.

From Parsons's *Analytical Spelling Book*

The use of emphasis is explained with similar lucidity.

Suppose you wished to call your brother at a distance, and he should not hear you at first would you not repeat it in this way : —

JOSEPH!!!

JOSEPH!!

Joseph!

growing louder every time? That is called raising the key.

Again, suppose you wished to ask your pa, if you may go a fishing with Jacob; and you are afraid he does not hear. You would ask this way:—

Occasionally at the end of a lesson which has not quite filled out the page the space is utilized for bits of advice and wisdom such as—

See that haggard, bloated, red-faced, hopeless looking drunkard, holding upon the fence! He began by drinking a *little*, and never meant to take too much. If you would not be a drunkard, never taste any thing that can make drunk.

“Swear not at all.” It is vulgar—it is degrading—it is profane to swear.

Part of a Page.

From *Spelling and Thinking*, 1841.

At the top of each page was a maxim

One of the most peculiar of the old spellers was *Exercises in Orthography*, a Providence publication

dated 1826. The title-page says that the book is "designed to assist young persons to spell with accuracy and effect," though from the look of the lessons you would think the whole thing was contrived for a joke. The spelling is in fact as bad as ingenuity can make it, and yet the volume is intended seriously and this crazy spelling is supposed to stimulate the pupil's interest. The preface advises that "The scholar should always be provided with a dictionary, and in order to rectify the false orthography the teacher should require him to copy with care each paragraph of this work; it is then presumed very considerable advantage will be found in the use of this compilation." Below are characteristic extracts: —

Nolledge is the best foundashun ov happines. Its kulte-vashun in yuth promotes vertshu, bi kreating habits ov mental disseplin; and bi inkulkating a sense ov morral oblegashun.

Menny nashuns liv nakid in kavurns undur ground, perform no labor, and depend for thare subsistens on the spontaneus produkts ov the erth, and on the flesh ov animals, witsh tha destroy bi simpel strattajems.

The arts ov savvidje life inklude the arts ov swimming, hunting, taking ame with missil weppons, and prokuring fire.

The art ov swimming depends furst in keeping the arms and hands undur watur; in protruding only the fase and part ov the hed out ov the water; and then izing sutsh akshun, as wil derekt the boddy in enny partikular korse.

Hunting is performed bi most savvidge nashuns on fut, and with menny ov them the prinsepal weppon is the klub. Therefore the swiftest and strongest uzhuely bekum tsheefs.

In taking ame with missel weppons, the presizhun witsh savvidje nashuns have attaned is wondurful. In throing a stone, tha seldum mis the smalest mark; tha transfiks fish in the watur; nok down burds on the wing; and strike evury enemy with unerring egzaktnes.

Among savvidjes, the uzhuall mode ov produsing fire is bi the rapid frikshun ov too peeses ov wood til tha produse flames. Having no mettels, tha do not pozzes the simpel methud ov kommunikating a spark to tinder, bi the violent kollizhun ov flint and steal.

In 1843 a similarly strange educational scheme was perpetrated under the title *Companion to Spelling-books*. A single specimen of the more than three hundred lessons in the book will suffice.

I have seen thy wonderous mite,
Thro' the shaddows of the night;
Thou who slumb'rest not nor sleapest,
Blessed are they Thou kindly keepest!
Thine the flaming spear of light,
Thine the darkness of the night,
Thine are all the gemms of ev'n
God of angels! God of Heav'n!
God of life, that fade shall never!
Glory to thy name fore ever!

Such a medley of mistakes would soon confuse even a good speller, and the plan is worse than useless unless one wants to acquire the orthography of a Josh Billings or an Artemus Ward.

IX

PRIMARY READERS

THE first period of American school-book authorship was characterized by erratic efforts and random shots in many directions. It did not become the general custom to put forth books in nicely graded series until well toward the middle of the nineteenth century, and in consequence many isolated spellers, primers, and readers were published and used for a brief period within a limited area. Readers of any sort for beginners were very few previous to 1825. So far as I am aware the first was *The Franklin Primer*, published in 1802, "containing a new and useful selection of Moral Lessons adorned with a great variety of elegant cuts calculated to strike a lasting impression on the Tender Minds of Children." The elegant cuts were a frontispiece portrait of Benjamin Franklin and about a dozen text illustrations of Bible scenes.

The book in size and general appearance had very much the look of a *New England Primer*. Indeed, the introduction says it was intended "as a substitute for the old Primer which has of late become almost obsolete." The most important portions of the volume were "a variety of tables, moral lessons and sentences, a concise history of the World,

appropriate Hymns, and DR. WATTS, and the Assembly of Divines' Catechisms." The history of the world was entirely Biblical, and began with the

THE FRANKLIN PRIMER.

MOSES killing the Egyptian.

From The Franklin Primer, 1802.

creation and ended with Christ's resurrection. For an example of the miscellany in the book I quote a poem entitled:—

Lessons in Verse.

WHEN the Sun doth rise you must go up each day,
And fall on your knees, and to God humbly pray :
Then kneel to your parents, their blessing implore,
And when you have money, give some to the poor.
Your hands and your face, in the next place wash fair,
And brush your apparel and comb out your hair.

Then wish a good morning to all in your view,
And bow to your parents, and bid them adieu ;
Salute every person as to school you go ;
When at school, to your master due reverence show.
And if you can't read, pray endeavour to spell,
For by frequently spelling you'll learn to read well.

Shun all idle boys, and the wicked and rude ;
And pray, only play with those boys who are good.
To church you must every Sunday repair,
And behave yourself decently while you are there.
At the close of the day, ere you go to your rest,
Kneel again to your parents, and be again blest :
And to the Almighty again humbly pray,
That he may preserve you by night and by day.

The next book of this class was *The Child's Instructor*, Philadelphia, 1808. A peculiar typographical feature is the use of the long *s* in some parts of the book, and the short *s* in others. Most printers had discarded the former altogether by this time. In Chapter I are the alphabet, some columns of three and four letter words, and a number of short sentences, of which the first is —

A bird that can sing, and will
not sing, must be made to sing.

Chapter II starts thus :—

1. Now George, you know all the letters.
Now you must learn to spell and read.
A good boy will sit and mind his books.
2. Knife, fork, spoon, plate, dish, cup, bowl, mug, jug,
pot, pan, tub, chair, ta-ble, bed, box, fire, wood, shov-el,
tongs, bel-lows.
3. What is your name? My name is George. How
old are you? Four years old. Do you go to school?
Yes, sir. Can you spell? Yes, sir, a little.
4. Bread, but-ter, cheese, meat, pud-ding, pye, cake,
beef, pork, veal, soup, salt, pep-per, su-gar, ho-ney, jel-ly,
car-rot.

This alternation of spelling and reading paragraphs is soon abandoned, and the spelling words are confined to a paragraph at the end of each lesson. Perhaps the most noticeable thing in the lessons is the constant reiteration of the idea that it is profitable both spiritually and materially to be good.

All dutiful children who do as they're bid,
Shall be lov'd, and applauded, and never be chid;
And their friends, and their fame, and their wealth fshall
increafe,
Till they're crown'd with the bleffings of plenty and peace.

Frank is a good boy; he loves his school, and learns to read. He can spell hard words and is head of the class. Frank shall have a new hat, and new shoes, and go to the fair.

Good boys and girls go to church. Did you go to

church? Billy went to church, and so did Betsey. The church is the house of God; and God loves little children when they go to church.

When you go to church you must sit still, and hear what the preacher tells you; he tells you to be good children and love your parents, and then God will bless you.

Do you know who makes it rain? I will tell you: God makes it rain. Do you see that dark cloud rising in the west? That cloud will bring thunder and lightning and rain. You need not be afraid; God makes it thunder; and he will not let it hurt you if you are good.

The following are some of the longer lessons in the latter part of the book. The unmitigated blackness of the lad's character portrayed in the first of these is quite impressive.

Description of a BAD BOY.

A bad Boy is undutiful to his father and mother, disobedient and stubborn to his master, and ill-natured to all his play-fellows. He hates his book, and takes no pleasure in improving himself in any thing. He is sleepy and slothful in the morning, too idle to clean himself, and too wicked to say his prayers:

He is always in mischief, and when he has done a fault, will tell twenty lies in hopes to clear himself. He hates that any body should give him good advice, and when they are out of sight, will laugh at them. He swears and wrangles, and quarrels with his companions, and is always in some dispute or other.

He will steal whatsoever comes in his way; and if he is

not caught, thinks it no crime, not considering that God sees whatsoever he does. He is frequently out of humour, and fullen and obstinate, so that he will neither do what he is bid, nor answer any question that is asked him.

In short, he neglects every thing that he should learn, and minds nothing but play and mischief; by which means he becomes as he grows up a confirmed blockhead, incapable of any thing but wickedness or folly, despised by all men of sense and virtue, and generally dies a beggar.

He that giveth to the poor, lendeth to the Lord.

There was a poor man who was charitable to excess; for he gave away all that he had to relieve the necessities of others; chusing rather to throw himself upon Providence, than to deny an alms to any one who asked him, so long as he had any thing to bestow.

Being at length, by his constant liberalities, reduced to a very indigent condition, he was forced to betake himself to digging for a livelihood. Yet notwithstanding he gained his own bread by hard labour, he ceased not to shew his wonted kindnesses to the poor; giving them whatever he could possibly spare from his own necessities.

One day as he was digging in the field, he found several earthen pots of gold, supposed to be buried there in the time of the wars. The good man carried this huge treasure home to his house, with all imaginable privacy.

And having distributed the greatest part of it in charity, he was going with the last reserve to the house of a distressed widow, to whom he gave a sufficient sum to relieve her wants, being all he had left: When as he was returning home he found a jewel in the high-way, which being sold, yielded him ten thousand crowns.

This was a noble bank for new liberalities, and a convincing argument, that there was something more than mere

chance which thus strangely recruited his purse; that it might not lack something to give to the poor.

Bleft is the man whose bowels move,
And melt with pity to the poor;
Whose soul with sympathizing love,
Feels what his fellow faints endure.
His heart contrives for their relief,
More good than his own hands can do:
He in the time of general grief,
Shall find the Lord hath bowels too.

A book very like the one I have been describing, both in title and text, was the *Child's Instructor and Moral Primer*, published at Portland, Maine, in 1822. The stories in it have to do mostly with such children as Timothy Trusty, who "is very desirous to learn"; Patty Primp, whose notion is that "to be a lady one must be idle, careless, proud, scorn inferiors, calumniate the absent, read novels, play at cards, and excel in fine dress"; John Pugg, whose "face and hands you would think were not washed once in a fortnight"; and Tom Nummy, who "hates his book as bad as the rod." Some of the other suggestively named characters are Tim Delicate, Charles Mindful, Caroline Modesty, Susy Pertinence, Cynthia Spindle, and Jack Fisty-Cuff. Except for Cynthia, you know what to expect of each without further details.

To indicate how scarce elementary readers were in the first quarter of the nineteenth century, I quote from the preface to Leavitt's *Easy Lessons in Reading*, Keene, New Hampshire, 1823:—

The compiler has been excited to the present undertaking by representations that there is no reading book to be found at the bookstores, suitable for young children, to be used intermediately, between the Spelling-Book and the English or American Reader.

Eager Students.

A title-page vignette in Leavitt's *Easy Lessons*, 1847.

The Testament is much used for this purpose; and, on many accounts, it is admirably adapted for a reading book in schools. But it is respectfully submitted to the experience of judicious teachers, whether the peculiar structure of scripture language is not calculated

to create a tone? I am persuaded it would be better to place a book in the hands of learners, written in a more familiar style. Such a work, I flatter myself, will be found in the following pages. The selections contain many salutary precepts and instructive examples, for a life of piety and morality, of activity and usefulness.

Mr. Leavitt later supplemented his *Easy Lessons* with a Second Part. In this the most noteworthy portion was a series of sentences to illustrate the sounds of the letters. The chaotic paragraphs which follow are fair samples:—

The baboon blabbed and blubbered, dabbled in ribbons, gabbed in gibberish, played hob-nob with a robin, brow-beat the tabby, made a hubbub for the rabble, bribed a nabob, and barbarously bamboozled a booby.

Our daddy did a deed, at dawn of day, that doubled the depredations of the dogged ducks and drakes, deceived the doubting dunce, addled the dandy paddy, and drove the saddled and bridled dog down the downward road.

A giddy, giggling girl gave a noggin of gruel to a big beggar with green glass goggles, going out of a greasy groggery.

Nathan Noonan knows his nose ; no man knows I know he knows his nose ; his nose knows he knows his nose.

An alliteration with a somewhat different purpose is the one below. It was designed as an exercise to teach the pupils to "avoid the vulgar error of clipping off the final g."

I am thinking of going to singing meeting, this evening, in hope of hearing the bells ringing, and of seeing ranks of smiling, loving, languishing lasses.

Then here is a group of sentences that seem to have suffered an earthquake shock, but they simply show the appropriate use of the rising and falling inflection.

Did you act properly, or improperly?
Did he ride to school, or did he walk?
Did you run away, or did you run home?
That remedy is worse than the disease.

Sentences illustrating Inflection.

From Leavitt's *Easy Lessons*, 1847.

A poem from *The Fourth Class Book*, Brookfield, Massachusetts, 1827.

LITTLE CHARLES

Well, Charles is highly pleased to day,
I gave him leave to go and play

Upon the green, with bat and ball ;
 And when he heard his playmates call,
 Away he sprung across the plain,
 To join the little merry train,
 But here he comes — why, what means this ?
 I wonder what has gone amiss, —
 Why, Charles, how came you back so soon ?
 I gave you leave to stay till noon.

I know it, sir, and I intended
 To play till every game was ended ;
 But, to say truth, I could not bear
 To hear those little fellows swear —
 They cursed so bold and fearlessly
 That the cold chills ran over me —
 For I was seized with awful dread
 That some of them would drop down dead —
 And so I turned and came away,
 For, Pa, I was afraid to stay !

An attractive little book published in 1830 was *The Clinton Primer*. It was named after De Witt Clinton, whose portrait appeared on its paper cover. Illustrations were used freely, and the body of the book was made up of reading at the top of the pages, spelling columns in the middle, and arithmetic at the bottom. I reprint some rather naïve fragments from the earlier lessons, and two of the longer lessons complete.

It is a mule. I see a mule ; do you ?
 He has a flute ; let him play on his flute.

Ripe pears are good for boys and girls, but it is a sin to eat too many of them. They often cause sickness.

Who does not love the robin? He sings a most lovely note.

The raven is not a fine bird nor a very good bird; he has been known to pull up corn.

THE HORSE RACE

Who loves a horse race? Are not too many fond of it? Does it not lead to many evils, and to frequent ruin? Never go to a horse race. Mr. Mix had one child, whom he called Irene; he had also a good farm, and some money. He went to the races with his child, dressed in black crape for the loss of her mother. Here Mr. Mix drank freely, and bet largely, and lost all he was worth. At night he went home a beggar; took a dose of brandy, and died before morning, leaving his child a pennyless orphan. Never go to a horse race.

THE COACH AND TWO.

Who is she that is growing up to the good fortune of riding in a coach and two? She is the girl who rises with the rising day;—whose hands and face are made clean;—whose hair is cleared of snarly locks, and neatly rolled in papers; and whose clothes are clean and whole though never gay. She who loves her book, her school, the truth, and her parents, and also the path of peace and virtue. I now see her through the window of the carriage, and I hear her say:—

The Coach and Two.

From *The Clinton Primer*, 1830.

“What though I ride in a coach and pair,
And in dress and food like a princess fare;
I'll not be proud like the haughty Moor,
Nor stop my ear at the cry of the poor.”

The next selection is from Worcester's *A Second Book for Reading and Spelling*, Boston, 1830. It is a story wherein merit is so promptly rewarded as to take one's breath away.

MR. WOOD AND CHARLES BELL.

From Worcester's *Second Book*, 1830.

One day, when Mr. Wood took a walk to the end of the town, he saw Charles Bell, who lives with his Aunt Jane, hard at work in his aunt's garden.

“I think you are warm, Charles,” said Mr. Wood.

Charles held up his head, and made a bow, and said — “Yes, sir; my aunt says, corn is so scarce, and bread so dear, that I must work, or else she cannot keep me.”

“You seem to be a nice boy,” said Mr. Wood; “will you come and live with me? I will give you as much bread as you want, and will not make you work so hard.”

But Charles thought his aunt needed him. So Mr. Wood told Charles to call at his house and he would give him a dollar and some good books, and he also offered to send Charles to school. Charles replied that he would refer the matter to his aunt. She was agreeably disposed, and he called on Mr. Wood and got the books. No doubt he got the dollar also, though that is not mentioned. Better still, his benefactor arranged to have him go to school, and "He was so good a boy and learned so fast that Mr. Wood sent him to college."

THOU SHALT NOT STEAL.

From Worcester's Second Book.

Here is pictured a youth of another sort. The text says:—

See that little boy creeping softly along on tiptoe towards his mother's tea-table. See him lift the cover of the sugar-pot and as quickly as possible, put one piece in his mouth, and another in his pocket.

His name is William Morton. His kind mother is sitting at the fire place mending his clothes, with his little baby sister asleep on her lap. She does not think that William is thus taking what is not his own.

William goes on from day to day, taking apples, and cakes, and sugar, without leave; and what is worse, he tries hard to conceal it, and even tells lies about it.

Does William know that this is stealing? Does he remember that this is breaking the EIGHTH COMMANDMENT of the Lord his God.

THE SLEIGH-RIDE.

From Worcester's Second Book.

For a final selection from Worcester's book I give this letter which Lucy Turner, thirteen years old, wrote to her mother, who was spending a month in Boston at the home of Lucy's aunt, Mrs. White. It serves as a dreadful example to all children who, like Lucy, "never take any pains to learn to spell."

Mi deer Mama,

Wen yu cum bak, wee shal awl bee pleased. Evry wun seams dul becaus yu air gon.

Farther sez hee wounts yu too sta longe enuff too hav
ay gude vissit; butt ie no hee wil bee gladd whenn yure
vissit iss ovur.

Jaims gose too skule and ie thinke hee behaivs wel.
Saror stais att hom, and wurks withe mee. Wee awl in-
joy gude helth.

Doo rite mee ay lettur, and tel mee abowt Bosten, and
ant Wite's foax, and hou soone wee ma expekt yu.

Yure verry luvng childe,

Lucy Turner.

Now, only think how much grieved and ashamed her
mother must have been, when she found that Lucy had
spelled only her name and one word right.

Two Pages.

From Gallaudet's *The Child's Picture Defining Book*, 1830
Reduced one-half.

Gallaudet's *The Child's Picture Defining and Read-
ing Book*, Hartford, 1830, had a half-page cut on

every left-hand page. Its author was evidently a man of much keener and more sympathetic pedagogic perception than most of the makers of school books and the plan of the book was quite interesting. The idea was to teach the meaning of words through the "language of pictures," and each of the engravings in the first part of the book is accompanied by a list of the most prominent objects in it and with a few short, simple phrases. The cuts are repeated in the latter part of the book, but this time the text that goes with each is a little story.

Here is an illustration from *The Progressive Reader or Juvenile Monitor*, Concord, New Hampshire, 1830:

A Bird.

From *The Progressive Reader*,
1830.

We are told that the bird it depicts "sang from morning till evening and was very handsome." Caroline, the little girl to whom the bird belonged, "fed it with seeds and cooling herbs and sugar, and refreshed it daily with water from a clear fountain." But at length it died. "The little girl lamented her beloved bird, and wept sore." Then her mother bought another "handsomer than the former, and as fair a songster."

"But Caroline wept still more," and her mother, "amazed," asked the reason. Caroline replied it was because she had wronged the bird that died by eating a piece of sugar herself that her mother had given her for the bird. The mother saw then why

Caroline had been so distressed. It was "the sacred voice of nature in the heart of her child."

"Ah!" said she, "what must be the feelings of an ungrateful child at the grave of its parents."

The longest narrative in the book was entitled —

The good Samaritan.
From *The Progressive Reader*.

CHARLES BRUCE TELLS HIS ADVENTURES.

When I was about twelve years old, an Indian by the name of Splitlog, came to my father's house in Boston. He was generally esteemed a good Indian, and he loved my father, because he once saved his life, when he was attacked by some sailors in the streets of Boston.

He asked my father to let me go home with him. He told me of excellent sport they had in shooting squirrels and deer where he lived; so I begged my father to let me go, and he at length consented.

Splitlog lived near Northampton, at the foot of a mountain called Mount Holyoke, just on the bank of Connecticut river.

There is a good road from Boston to Northampton now, and the stage travels it every day. But the road was bad when I went with Splitlog, and there were no stages in America then.

So Splitlog and I set out on foot. The second day we arrived at Worcester. It was then a very little town, and there were no such fine houses there as now.

The fourth day we arrived at Splitlog's house, which was a little wigwam at the foot of mount Holyoke.

In this little house we found Splitlog's wife and three children; two boys and a girl. Splitlog's wife roasted some bear's meat, and gave us some bread made of pounded corn, which formed our supper.

We sat on the floor, and took the meat in our fingers, for the Indians had no knives or forks. I then went to bed on some bear skins, and slept well.

Early in the morning, Splitlog called me from my sleep, and told me they were going into the woods a-shooting, and that I must go with them. I was soon ready and set out with Splitlog and his two sons.

It was a fine bright morning in October. The sun was shining on the top of mount Tom and mount Holyoke. We ascended Holyoke, through the woods.

At length we climbed a high rock, from which we could see the beautiful valley far below us, in the centre of which was the little town of Northampton.

"Do you see those houses?" said Splitlog to me. "When my grand-father was a boy, there was not a house where you now see so many. That valley, which now belongs to white men, then belonged to red men. But hark! I hear a squirrel chattering; we must go and find him. Whist!" said Splitlog, "and follow me."

We all followed accordingly, and soon discovered a fine grey squirrel sitting in the top of a walnut tree with a nut in his fore paws.

Splitlog beckoned to his youngest son, who drew his bow, and discharged his arrow, which whistled over the back of the squirrel, but did not touch him.

Splitlog's eldest son immediately discharged his arrow, which struck the squirrel in the side, and brought him instantly to the ground.

After this adventure, we proceeded cautiously through the woods. We had not gone far, when Splitlog beckoned to us all to stop.

"Look yonder," said he to me, "on that high rock above us." I did so and saw a young deer, or fawn, standing upon the point of a rock, which hung over the valley.

Splitlog now selected a choice arrow, placed it on the bow, and sent it whizzing through the air. It struck the fawn directly through the heart.

The little animal sprang violently forward over the rock, and fell dead, many feet below, where Splitlog's sons soon found him. We now returned to Splitlog's house carrying the fawn with us.

This hunt was the chief event in Charles Bruce's visit and a few days later he returned to Boston.

Among the engravings in the book is the one reproduced herewith. The text says:—

To give a better idea of the figure and appearance of the lion, I have procured this picture of a young lion; by which you will see that lions, when a few weeks old, are only as large as small dogs.

A Young Lion.

From *The Progressive Reader*

The zebra picture is accompanied by the statement that "His appearance is very beautiful, and he is esteemed one of the handsomest of quadrupeds."

"A Handsome Quadruped."

From *The Progressive Reader*

The French.

From *The Progressive Reader*.

Of the squirrel we are told "Its tail constitutes its greatest singularity, as well as its principal ornament. It is also not less useful than ornamental; for being sufficiently large and bushy to cover the whole body, it serves as an excellent defence against the inclemencies of the weather. It also greatly assists it in clinging and adhering to trees."

The most ambitious poem in the book is the one reprinted in part below : —

STORY OF AMERICA IN VERSE

Columbus was a sailor brave,
The first that crossed th' Atlantic wave.
In fourteen hundred and ninety-two,
He came far o'er the ocean blue,
Where ne'er a ship had sailed before,
And found a wild and savage shore,
Where naked men in forests prowled,
And bears and panthers roamed and howled.

At length, when years had passed away,
Some English came to Virginia ;
'Twas sixteen hundred seven ; be sure
You let this in your mind endure ;
For 'twas the first bold colony
Planted in North America ;
The first that laid the deep foundation,
On which has since been built a nation.
Well, here they raised a far-famed Town
On James' river, called Jamestown.
They struggled hard 'gainst many sorrows,
Sickness and want, and Indian arrows ;
But bold and strong at length they grew,
And were a brave and manly crew.

'Twas eight years after this, — I mean
The year sixteen hundred fifteen, —
Some Dutch, from Holland, settled pat on
An Island which they called Manhattan,
And straight they sat themselves to work,
And built the city of New-York.
Now let the laughing wags and jokers
Say that the Dutch are stupid smokers ;
We only tell, that, dull or witty,
They founded famous New-York city ;
The largest city in the west,
For trade and commerce quite the best.

A curious lesson found in *The Union Primer*,
1832, was this : —

A boy who was idle and wicked, saw an old man with
poor clothes on — he went up to him as he was in the
grave-yard, and said, " Father, you are in a very miserable
condition if there is not another world." " True, son,"

replied the old Christian, "but what is your condition if there is? I have a plenty to keep me warm and dry, but I fear you have not that which can keep your soul from Hell."

A Depiction of Wickedness.

Printed above the Ten Commandments in *The Union Primer*, 1832.

The compiler of *The Child's Guide*, a popular and in many ways admirable text-book, published at Springfield, Massachusetts, in 1833, urges that the pupils should read "very distinctly and slowly," and he says, "When *I* used to go to school I found these *lines* in my book:—

Learn to speak *slow*; all other graces
Will follow in their proper places."

As an aid to clear comprehension and correct enunciation the text is well peppered with words in italics to indicate that such words are "emphatical." On the next page is the frontispiece. No wonder "all the boys looked" when they discovered their

master had been carrying a prickly thing like that in his pocket. It seems the master had happened along that morning while a group of boys were pounding chestnuts out of some green burs they had knocked

“He put his hand into his pocket again, and took out the chestnut burr, and all the boys looked at it.”

Frontispiece to *The Child's Guide*, 1833.

off a tree, and he heard them declaring that the chestnuts “ought to grow right out in the open air, like apples; and not have such vile prickly *skins* on them.” He asked for one of the burs, and ap-

parently carried it in his pocket all day, for the text says : —

That afternoon, when it was about time to dismiss the school, the boys put away their books, and the master read a few verses in the Bible and then offered a prayer, in which he asked God to forgive all the sins any of them had committed that day, and to take care of them during the night. After this he took his *handkerchief* out of his pocket, and put his hand into his *pocket* again, and took out the chestnut *burr*, and all the boys *looked* at it.

Then the master, through questions and explanations, satisfied the scholars that prickly burs are the only proper and safe covering for chestnuts.

In a lesson farther on, entitled "The Listener," are recounted the tribulations of Charlotte Walden, who "had a constant desire to hear what everybody was saying," and who if sent out of the room when her father and mother did not wish her to hear their conversation, stopped outside the door "with her ear close to the key-hole."

One of her *curls* once got entangled in the *key*, and when her father suddenly opened the door, she fell forward into the room, and hurt her *nose* so that it *bled*.

When she knew that her mother had *visitors* in the parlor, or that her father had *gentlemen* there with him on *business*, she would quit her lessons or her playthings, and come softly down stairs and listen at the door; or would slip into the garden and crouch down under the open *window*, that she might hear what they were *saying*.

Once when she was stooping, half double, under the parlor window, her father, not knowing that she was *there*,

and finding that a fly had got into the glass of beer that he was going to drink, went to throw out the *beer*, and emptied the tumbler on Charlotte's *head*.

But neither these nor other mishaps reformed her until one evening she secreted herself at the top of the cellar stairs to listen to the servants talking in the kitchen. She fell asleep, and about midnight tumbled off the stairs on to a heap of coal. Her screams awakened the household, she was taken to her room, and sickness and repentance and never-did-so-any-more followed as a matter of course.

"Dear uncle, I cry almost all day long."

From The Child's Guide.

This shows the habit of the times in presenting right and wrong to the youthful mind. There was always the same sharp contrast; evil suffered prompt and severe punishment, and good was as promptly and decisively rewarded, while reforms were astonishingly sudden and complete. Actual experience

must have been sorely disappointing to the child who believed these character-myths. Here is another typical reading-book story from *The Child's Guide*. It is called —

THE IDLE SCHOOL BOY.

I will tell you about the *laziest* boy you ever heard of. He was indolent about *every thing*. When he had spelled a word, he drawled out one syllable after another, as if he were afraid the syllables would *quarrel*, if he did not keep them a great ways *apart*. Once, when he was saying a lesson in Geography, his Master asked him, "What is said of *Hartford*?" He answered, "Hartford is a flourishing comical town."

He meant it was a "flourishing, *commercial* town"; but he was such a dunce, that he *never* knew what he was about.

Another day, when his class were reciting a lesson from the Dictionary, he made a mistake, worse than all the rest. The word, A-ceph-a-lous, was printed with syllables divided as you see; the definition of the word was, "without a head."

The idle boy had often been laughed at for being so very *slow* in saying his lesson; this time he thought he would be very *quick* and *smart*; so he spelled the word before the Master had a chance to put it out. And how do you think he spelled it?

"A-c-e-p-h, Aceph," said he; "A louse without a head." The boys laughed at him so much about this, that he was obliged to leave school.

You can easily guess what luck this idle boy had. His father tried to give him a good education, but he would be a dunce; not because he was a *fool*, but because he was

too lazy to give his *attention* to any thing. He had a considerable fortune left him; but he was too lazy to take *care* of it; and now he goes about the streets, with his hands in his pockets, begging his bread.

“Two Wicked Birds.”

From Pierpont's *The Young Reader*, 1835.

The above engraving from Pierpont's *The Young Reader*, illustrates a story “about two foolish cocks that were always quarrelling, which is very naughty.” These two wicked birds “were hardly out of the shell before they began to peck at each other, and they never looked pretty, because their feathers were pulled off in fighting till they were quite bare.” They seem, however, to have plenty of feathers in the picture. As was to be expected, they came to an ill end, and they got only their just deserts when a fox ate them both.

Lovell's *Young Pupils' Second Book*, New Haven, 1836, followed the plan of *The Child's Guide* in the use of italics, but what it particularly prided itself on

was its pictures. These it says are of "a superior order." They consisted chiefly of "compound cuts," all of the same general style as the one reproduced herewith. The preface claims that the compound cuts are certain to "make a deep and *lasting* impression, aiding the memory by storing it with useful and accurate knowledge. After the child has pored over them, the details which follow will be read with anxiety and delight." The text accompanying the cut selected was this:—

The Goat.

His horns are made into

knife and fork handles.

His skin is made into

gloves.

A "Composite Cut."

From Lovell's *The Young Pupils' Second Book*, 1836.

Not many goats are raised in this country. They *gnaw* the bark of trees and spoil them, so they have not been suffered to increase. In some parts abroad, and most of all in the east of the world, there are *many* goats. The he-goats have long *horns*. Young goats are called *kids*, and are full of play, and skip about in a very droll manner. In a *wild* state, goats climb steep rocks, and can *stand* and *spring* where few other animals would *dare to go*. The goat has a very strong and unpleasant smell, but his flesh

Going to the Fields.

The pretty little Bird.

From American Juvenile Primer, 1838.

That, my dear, is what we can not certainly know; the moon being at too great a distance for us to discover any living creatures upon it. But, judging from what we *can* discover, and from the general resemblance of the moon to the earth, we have reason to suppose that the moon *may* be inhabited by rational, intelligent creatures, capable of knowing and praising their Creator.

The Sun.

The sun is above a *million* times larger than the *earth*; and like the earth, turns round about *itself*. It was formerly supposed to be an immense *body of fire*; but this opinion is no longer entertained by those who appear to be *best* acquainted with the subject.

They think it can not be a body of fire, because, in that case the nearer we approached to it, the greater degree of warmth we should feel. But the *contrary* is the fact; it is ascertained, that upon very *high* mountains the air is much colder than it is below. Besides, by looking at the sun through a glass made for the purpose, we perceive some *dark spots* upon it, which would not be the case were it a body of fire. We conclude, therefore, that the sun is *not* a body of fire.

What then *is* the sun?

The sun is understood to be an immense ball, or globe, surrounded with an *illuminated atmosphere*, which acting upon the air that *encompasses* the earth and other planets, in a manner we are *unacquainted* with, produces light and heat.

Hat

A Topsy-turvy Hat.

From Bentley's *The Pictorial Primer*, 1842.

Mandeville's *Primary Reader*, New York, 1849, endeavors to teach words and their meanings by elaborate repetitions and combinations. The text makes a

very queer patchwork. Here is a lesson where the words the child is specially to learn are “par-rot, ti-ger, cam-el.” It might have been just as well in deference to the pictures not to have talked so much of cages and carts.

This is a par-rot in a cage
against the wall

That is a ti-ger in a cage
upon a cart.

This must be a cam-el.

Doubtful Statements.

From Mandeville's *Primary Reader*, 1849.

The text goes on to say : —

Every tame parrot was once a wild parrot in the woods.

Some men have several parrots in the same cage against the wall, but this man has but one.

Every tiger is not young, but some tigers are old tigers.

Camels are high, long, large and strong.

The camel is not wild and fierce like the tiger in the cage on the cart, but tame and mild.

Some parrots can talk like any boy or girl.

No one should put his hand or his head in the cage of the fierce tiger.

All camels will carry men and women, boys and girls, as well as a large horse, or a strong mule.

Below is a specimen of what the book can do when it undertakes to tell a story : —

Two boys went out in-to the snow, with a lit-tle sled. One was na-med James, the oth-er was na-med Sam-u-el. James said to Sam-u-el, "You dare not go on that pond with your sled." Sam-u-el said, "Yes, I dare, but it is wrong; be-cause fa-ther said we must not do it." Then James laugh-ed and said, "What of that? Fa-ther can-not see us; for he is at work in the shop."

Was not James a wick-ed boy? He was. He for-got that God saw him all the time.

Sam-u-el beg-ged him not to take the sled on the pond, be-cause the ice was thin. But James was ob-stin-ate, and went on the thin ice a great way. Then Sam-u-el went back to the house and read in his Sun-day-school book.

After Sam-u-el had read a lit-tle while, he heard a noise out of doors. It was James's voice. Sam-u-el was fright-en-ed, and ran out, and there saw James in the wa-ter. The ice was bro-ken, and James was up to his neck in the pond. The poor boy was scream-ing for some-bod-y to come and take him out. Sam-u-el took a long pole, and held the end of it, and James caught hold of the oth-er end and crawl-ed out. His moth-er was ver-y sor-ry. She was a-fraid James would be sick; and he was sick a long time. But there was an-oth-er thing which made her more sor-ry still. It was his be-ing so wick-ed.

The selections I have made show certain salient and picturesque features of the old-time readers, but leave many books entirely unmentioned. I have said nothing of the readers edited by Lyman Cobb, who was the first to compile a thoroughly complete and well-graded series. Worcester's books soon followed, and Sanders's came a little later, and by 1850 Town, McGuffey, Russell, Swan, and others were in the field and the series idea was firmly established.

X

ADVANCED READERS

FOR several decades in the early days of the Republic the Catechism, the Psalter, and the Bible continued to be extensively used in the schools, and served for drilling the pupils in the art of reading. But the child could not acquire a taste for reading from such sources, nor obtain from them information concerning history, or the world about him, or the world at large. There was a demand for more freedom in the use of secular material in the school curriculum. The national life was developing rapidly, interests were broadening, and a steady theological diet was no longer satisfying. Besides, the general unity of religious doctrine which characterized the people earlier had given place to diversity, and Calvinism had strenuous opponents. As a result there was a marked increase in the number and variety of the school-books, and in these the nature of the child, his inclinations, tastes, and desires became more and more dominant factors in the choice and arrangement of the subject-matter. Instead of demanding that the child should adjust himself entirely to the course of study, efforts were made to adjust the course of study to the requirements of the child.

The first reader produced on this side of the Atlantic was compiled by the industrious Noah Webster, shortly after the Revolution, as the Third Part of his *Grammatical Institute*. Hitherto, the spellers and New England Primers were the only text-books containing exercises in reading. Webster's title-page describes his book as "An American Selection of Lessons in Reading and Speaking calculated to improve the minds and refine the taste of youth, to which are prefixed Rules in Elocution and directions for expressing the Principal Passions of the Mind." From the prefatory matter I have taken the several paragraphs which follow : —

Let each syllable be pronounced with a clear voice, without whining, drawling, lisping, stammering, mumbling in the throat, or speaking through the nose.

If a person is rehearsing the words of an angry man, he should assume the same furious looks; his eyes should flash with rage, his gestures should be violent, and the tone of his voice threatening. If kindness is to be expressed, the countenance should be calm and placid, and wear a smile, the tone should be mild, and the motion of the hand inviting.

Mirth or *laughter* opens the mouth, crisps the nose, lessens the aperture of the eyes, and shakes the whole frame.

Grief is expressed by weeping, stamping with the feet, lifting up the eyes to heaven, &c.

Fear opens the eyes and mouth, shortens the nose, draws down the eye-brows, gives the countenance an air of wildness; the face becomes pale, the elbows are drawn back parallel with the sides, one foot is drawn back, the heart beats violently, the breath is quick, the voice weak and trembling.

Boasting is loud and blustering. The eyes stare, the face is red and bloated, the mouth pouts, the voice is hollow, the arms akimbo, the head nods in a threatening manner, the right fist sometimes clenched and brandished.

The bulk of the book is made up of three departments — "Narration," "Lessons in Speaking," and "Dialogues." In one lesson with the caption "Rules for Behavior," we find this advice: —

Never hold any body by the button or the hand, in order to be heard through your story; for if the people are not willing to hear you, you had much better hold your *tongue* than hold *them*.

Here are the opening paragraphs of a tale entitled

MODESTY, DOUBT, AND TENDER AFFECTION.

CALISTA was young and beautiful, endowed with a great share of wit and solid sense. Agathocles, whose age very little exceeded hers, was well made, brave and prudent. He had the good fortune to be introduced to Calista's home, where his looks, wandering indifferently over a numerous circle, soon distinguished and fixed upon her.

But recovering from the short ecstasy occasioned by the first sight, he reproached himself, as being guilty of rudeness to the rest of the company; a fault which he endeavoured to correct by looking round on other objects. Vain attempt! They were attracted by a powerful charm, and turned again towards Calista. He blushed as well as she, while a sweet emotion produced a kind of fluttering in his heart, and confusion in his countenance.

Of course, after that, Agathocles became a frequent caller, and in every visit "he discovered some new perfection in the fair Calista."

At last he resolved to open his heart to her; but he did not do it in the affected language of a romantic passion. "Lovely Calista," said he ingenuously, "it is not mere esteem that binds me to you, but a most passionate and tender love. I feel that I cannot live without you: Can you, without violence to your inclinations, consent to make me happy? I may love you without offence; 'tis a tribute due to your merit: But may I flatter myself with the hopes of some small return?"

A coquette would have affected to be displeased at such a declaration. But Calista not only listened to her lover without interrupting him, but answered him without ill-nature, and gave him leave to hope. Nor did she put his constancy to a tedious trial: the happiness for which he sighed was no longer delayed, than was necessary to prepare for the ceremony.

Another lesson from which I wish to quote is —

SELF-TORMENTING

SERGEANT *Tremble* and his wife, during a time of general health, feel as easy and secure as if their children were immortal. If there are no cancers, dysenteries, small-pox, bladders in the throat, and such like things to be heard of, they almost bid defiance to death; but the moment information was given that a child six miles off, had the throat distemper, all comfort bade adieu to the house; and the misery then endured from dreadful apprehensions, lest the disease should enter the family, is unspeakable.

The old sergeant thought that when the wind blew from that quarter, he could smell the infection, and therefore

ordered the children to keep in the house, and drink worm-wood and rum, as a preservation against contagion. As for Mrs. *Tremble*, her mind was in a state of ceaseless agitation at that time. 'A specimen of the common situation of the family is as follows.

Susy, your eyes look heavy, you don't feel a fore throat, do you? Husband, I heard *Tommy* cough in the bed room just now. I'm afraid the distemper is beginning in his vitals, let us get up and light a candle. You don't feel any fore on your tongue or your mouth, do you, my dear little chicken? It seems to me Molly did not eat her breakfast with so good a stomach this morning as she used to do. I fear she has got the distemper coming on.

To be short, the child that had the distemper died; and no other child was heard of, in those parts, to have it; so that tranquility and security were restored to Mr. *Tremble's* family, and their children regarded as formerly, proof against mortality.

THE LITTLE READER'S ASSISTANT;

CONTAINING

- | | |
|---|--|
| <p>I. A number of Stories, mostly taken from the history of America, and adorned with Cuts.</p> | <p>planation of the Constitution of the United States.</p> |
| <p>II. Rudiments of English Grammar.</p> | <p>IV. General principles of Government and Commerce.</p> |

All adapted to the capacities of children.

About 1790 Webster published another reader, a square little book called *The Little Reader's Assistant*. It contained "familiar stories in plain language for the benefit of children, when they first begin to read without spelling." In other words, it was a middle-class reader. A good many years were still to pass before any one would devise a primary reader. The first part of Webster's book is largely

STORY OF COLUMBUS.

From The Little Reader's Assistant.

a relation of the early settlers' experiences with the Indians. No details are too gruesome to be omitted, and the effect on the imaginations of "Little Readers" could not have been altogether salutary; for the stories were sure to be recalled whenever a child had to encounter alone the mysterious dusk of evening or the gloom of night. The book has the honor to be the earliest reader to use

illustrations, and several of the weird little pictures are here reproduced. The art of engraving as practised in this country was very crude, and these are fair examples of the rough-hewn primitiveness of the book illustrations of the period. Their uncouthness was still further emphasized by the paper on which they were printed, for all the paper of early American manufacture was inferior, and very little, even of the best, was of a snowy whiteness.

The first picture in Webster's book illustrated the "Story of Columbus," and I suppose that is Columbus himself waving his hat from the mast-head. The sea has a very lively appearance, and there is some doubt whether the artist has delineated an expanse of white-capped waves or a multitude of leaping fish.

A "Christian" Indian getting the Best of a Heathen Indian.
From Webster's *The Little Reader's Assistant*.

The text accompanying the picture of the two Indians says the individual behind the rock was

Night Attack of Indians on Major Waldron's House, Dover, N.H.

Captain John Smith a Captive in Serious Danger.

From The Little Reader's Assistant.

friendly to the English. He was pursued by one of his enemies and betook himself to this refuge; "but seeing his pursuer on the other side, waiting to shoot him as he lifted his head above the rock he

put his hat upon his gun, and raised it slowly above the rock. The Indians seeing it, fired a ball through it; and before he could load his gun again, the christian Indian shot him through the head."

The cut showing the predicament of Captain John Smith must have been very interesting to the old-time school children, and equally so the spirited portrayal of Putnam and the Wolf. You can see

Putnam and the Wolf.
From *The Little Reader's Assistant*.

the rope attached to Putnam's leg and his comrades up above gripping it, ready to pull him forth. We can fancy very well the damage to that hero's clothes and person as he was hauled out, if the picture gives a truthful impression of the jaggedness of the rocks.

The street scene shows "Charles Churchill the poet. As he was returning home one night at a late hour, he was accosted by a female, whose air and manner raised his curiosity to take particular

notice of her. She appeared to be about fifteen years old, and handsome, but pinching want had given her beauty a sickly cast, and the horrors of despair were seen in the languid smile which she put

The Benevolent Churchill.
From *The Little Reader's Assistant*.

on while she spoke." Churchill gave her a piece of money whereat "she fell upon her knees in the street, and raising her eyes and hands to heaven, she remained in that posture for some time, unable to express the gratitude that filled her heart." She told her benefactor a sad tale of distress, and he learned she had parents dependent on her. So he went with her to her home garret and there the rest of the family were soon on their knees around the poet, and he "gave them ten guineas."

The final picture is of a queer-looking beast that one would hardly recognize if it were not labelled. The text says:—

THE Buffalo, found in the woods of America, is a large animal with black, short horns. He has a large beard under his lower jaw, and a large tuft of hair upon his head, which falls down upon his eyes and gives him a hideous look. He has a large bump or rising on his back, beginning at his hips and increasing to his shoulders. This is covered with hair, somewhat reddish, and very long. The rest of the body is covered with black wool; a skin produces about eight pounds of wool, which is very valuable.

The Buffalo.

From The Little Reader's Assistant.

The buffalo has a good smell, and will perceive a man at a great distance, unless the wind is in the man's favor. His flesh is good, but the bull's is too tough, so that none but the cow's is generally eaten. His skin makes good leather—and the Indians use it for shields.

The last half of the book is devoted to a "Farmer's Catechism," mostly agricultural instruction, but starting off with some general laudation like —

Q. Why is farming the *best* business a man can do?

A. Because it is the most necessary, the most healthy, the most innocent, and most agreeable employment of men.

Q. Why is farming the most *innocent* employment?

A. Because farmers have fewer temptations to be wicked than other men. They live much by themselves, so that they do not see so many bad examples as men in cities do. They have but little dealing with others, so that they have fewer opportunities to cheat than other classes of men. Besides, the flocks and herds which surround the farmer, the frolics of the harmless lambs, the songs of the cheerful birds, and the face of nature's works, all present to the husbandman examples of innocence, beauty, simplicity and order, which ought to impress good sentiments on the mind and lead the heart to God.

One of the most popular of the early readers was Caleb Bingham's *The American Preceptor*, Boston, 1794. The preface declares that —

In making selections for the following work, a preference has been given to the productions of American genius. The compiler, however, has not been wholly confined to America; but has extracted from approved writers of different ages and countries. Convinced of the impropriety of instilling false notions into the minds of children, he has not given place to romantic fiction. The compiler pledges himself, that this book contains neither a word nor a sentiment which would "raise a blush on the cheek of modesty."

Most of the early reading books drew their materials largely from British sources, and American contributions were for a long time mainly from the speeches of the Revolutionary orators. Typical subjects were: Frailty of Life, Benevolence of

the Deity, Popery, Rules for Moderating Our Anger, Reflections on Sun Set, Character of a Truly Polite Man, The Child Trained Up for the Gallows. These and the rest of their kind were all "extracted from the works of the most correct and elegant writers." The books were also pretty sure to contain selections from the Bible, and some had parts of sermons. Indeed, nearly all the matter was of a serious, moral, or religious character.

From the *American Preceptor* I quote a portion of

A Dialogue between two School Boys, on Dancing.

Harry. Tom, when are you going to begin your dancing? You will be so old in a short time as to be ashamed to be seen taking your five positions.

Thomas. I don't know as I shall begin at all. Father says he don't care a fig whether I learn to jump any better than I do now; and, as I am to be a tradesman, he is determined to keep me at the reading and writing schools.

Har. That must be very dull and dry for you. And what good will all such learning do you, so long as you make the awkward appearance you do at present? I am surprised at your father's folly. So because you are to be a tradesman, you are not to learn the graces!

Thus they go on, Thomas representing wisdom and Harry folly, and though neither convinces the other, they make it very plain where the reader's sympathies ought to be.

Another very successful book of Bingham's, published about a dozen years later than his *Preceptor*, was *The Columbian Orator*, a compilation of dialogues and pieces suitable for declamation. Perhaps

nothing in the book more generally pleased or was oftener heard from the school platform than

LINES SPOKEN AT A SCHOOL-EXHIBITION,
BY A LITTLE BOY
SEVEN YEARS OLD.

YOU'D scarce expect one of my age,
To speak in public, on the stage;
And if I chance to fall below
Demosthenes or Cicero,
Don't view me with a critic's eye,
But pass my imperfections by.
Large streams from little fountains flow;
Tall oaks from little acorns grow:
And though I now am small and young,
Of judgment weak, and feeble tongue;
Yet all great learned men, like me,
Once learn'd to read their A, B, C.
But why may not Columbia's soil
Rear men as great as Britain's isle;
Exceed what Greece and Rome have done,
Or any land beneath the sun?
Mayn't Massachusetts boast as great
As any other sister state?
Or, where's the town, go far and near,
That does not find a rival here?
Or where's the boy, but three feet high,
Who's made improvements more than I?
These thoughts inspire my youthful mind
To be the greatest of mankind;
Great, not like Caesar, stain'd with blood;
But only great, as I am good.

In the extract below we get a glimpse of very primitive educational conditions. The book vouches for what is depicted as still true to life in some vicinities, though not nearly as applicable as formerly. The scene is a public house.

Enter SCHOOL-MASTER, with a pack on his back.

Schoolmaster. How fare you, landlord? what have you got that's good to drink?

Landlord. I have gin, West-India, genuine New England, whiskey, and cider brandy.

Schoolm. Make us a stiff mug of sling. Put in a gill and a half of your New England; and sweeten it well with lasses.

Land. It shall be done, Sir, to your liking.

Then the schoolmaster asks if the landlord knows of any vacancy in the local schools, and is informed they are without a master in that very district, and the three school-committeemen were to be at the tavern directly to consult on school matters. The landlord says the last master "was a tyrant of a fellow and very extravagant in his price. He grew so important the latter part of his time, that he had the frontery to demand *ten dollars* a month and his board." He never patronized the landlord's bar, and was always in his chamber of an evening "poring over his musty books." Finally the severity of his discipline roused the neighborhood, and he was hooted out of town.

The three committeemen, accompanied by the parson, at length appeared at the tavern, and the

schoolmaster applies for a position. He acknowledges that he has never had more than a year's schooling, and that he knows nothing of geography or grammar, but he can read a newspaper without spelling more than half the words, and has "larn'd to write considerably, and to cypher as fur as Division." Most important of all, he will work for five dollars a month, and the committee hire him. The parson alone protests.

By far the most copiously illustrated of any of the earlier readers was a thin 12mo published in Philadelphia in 1799, called *The Columbian Reading Book, or Historical Preceptor*, "a collection of Authentic Histories, Anecdotes, Characters, &c. &c. calculated to incite in young minds a love of virtue, from its intrinsic beauty, and a hatred of vice from its disgusting deformity." From the 164 short lessons I make several selections.

Spirited Reproof of a Woman.

An Appeal to King Philip.

From *The Columbian Reading Book*, 1799.

PHILIP, rising from an entertainment at which he had sat for some hours, was addressed by a woman, who begged him to hear her cause. He accordingly heard it, and, upon her saying some things not pleasing to him, he gave sentence

against her. The woman immediately, but very calmly, replied, "I appeal." "How," says Philip, "from your king? To whom then?" "To Philip when fasting," returned the woman. The manner in which he received this answer would do honour to the most sober prince. He afterwards gave the cause a second hearing, found the injustice of his sentence, and condemned himself to make it good.

Gasconade.

A Gentleman of Gascony who inherited two thousand crowns a year from his father, commenced living at Paris, and being a gay volatile genius, soon squandered his fortune, and was reduced to the lowest ebb of wretchedness. Yet he never lost his spirit and courage; but with the small pittance he had left, he purchased a mule and turned water-carrier. Some time

A Meeting of Old Friends in the Streets of Paris.

From *The Columbian Reading Book*.

afterwards, as he was trafficking his merchandize up and down the streets, he happened to meet two of his old companions, who would have avoided him for fear of giving him pain, at being caught with such an equipage. But he sprang forward and saluted them with his usual freedom; and, when they seemed to pity his ill fortune, briskly interrupted them by saying, "That he had forty thousand crowns worth of water in the Seine, but for want of servants, was obliged to sell it himself."

The Clever Indian.
From *The Columbian Reading Book*.

The retort Courteous.

A white man meeting an Indian asked him, "whose Indian are you?" To which the copper-faced genius replied, "I am God Almighty's Indian: whose Indian are you?"

Philosophy an unfailing refuge.

The Philosopher.
From *The Columbian Reading Book*.

ZENO, a philosopher of Cyprus, turning merchant for his better support, was always unfortunate by losses at sea, insomuch that he was reduced to one small vessel; and having advice that it was also cast away in the ocean, and nothing saved,

he received the news with cheerfulness, saying, "O Fortune, thou hast acted wisely, in forcing me to throw off the rich attire of a merchant to put on the mean and despised habit of a scholar, and return me back to the school of philosophy, where there is nothing to lose, and the most satisfactory and durable things to be gained."

Successful Bravery.

Mr. GILLET, a French quarter-master, going home to his friends, had the good fortune to save the life of a young woman, attacked by two ruffians.

He fell upon them, sabre in hand, unlocked the jaw of the first villain, who held a dagger to her breast, and at one stroke pared the nails of the other just above the wrist. Money was offered by the grateful parents;

he refused it; they offered him their daughter, a young girl of 16, in marriage; the veteran, then in his 73rd year, declined, saying, "Do you think that I have rescued her from instant death, to put her to a lingering one, by coupling so lively a body with one worn out with age?"

A Rescue.

From *The Columbian Reading Book*.

Few of the early text-books enjoyed more favor than Staniford's *The Art of Reading*, Boston, 1807. The title-page says it contains "A variety of selected

and original pieces, Narrative, Didactic, Argumentative, Poetical, Descriptive, Pathetic, Humorous, and Entertaining, together with Dialogues, Speeches, Orations, Addresses, and Harangues." The following is an example of what the book calls humorous:—

AWKWARDNESS IN COMPANY.

1. WHEN an awkward fellow first comes into a room, he attempts to bow, and his sword, if he wears one, gets between his legs, and nearly throws him down, Confused and ashamed, he stumbles to the upper end of the room, and seats himself in the very place where he should not. He there begins playing with his hat, which he presently drops; and recovering his hat, he lets fall his cane; and, in picking up his cane, down goes his hat again. Thus 'tis a considerable time before he is adjusted.

2. When his tea or coffee is handed to him, he spreads his handkerchief upon his knees, scalds his mouth, drops either the cup or saucer, and spills the tea or coffee in his lap. At dinner, he seats himself upon the edge of his chair, at so great a distance from the table, that he frequently drops his meat between his plate and his mouth; he holds his knife, fork, and spoon, differently from other people; eats with his knife to the manifest danger of his mouth; and picks his teeth with his fork.

3. If he is to carve he cannot hit the joint; but, in laboring to cut through the bone, splashes the sause over every body's clothes. He generally daubs himself all over; his elbows are in the next person's plate; and he is up to the knuckles in soup and grease. If he drinks, 'tis with his mouth full, interrupting the whole company with, "To your good health, Sir," and "My service to you;" perhaps coughs in his glass, and besprinkles the whole table.

4. He addresses the company by improper titles; mistakes one name for another; and tells you of Mr. What d'ye call him, or you know who; Mrs. Who'ist there, what's her name, or how d'ye call her; He begins a story; but, not being able to finish it, breaks off in the middle, with, "I've forgot the rest."

I also reprint one of the dialogues. It is intended to illustrate the prejudices of the vulgar against academies. The participants in the conversation are Old Trumpet, Goody Trumpet, and their son, Leander.

OLD TRUMPET, *alone.*

A PLAGUE and Satan confound such ignorance, says I; what, the dog is ruin'd and undone for ever and for 'tarnally. Must I feed and pamper and lodge the puppy? ay, ay, and send him to the Mackademy, and give him larning — and for what? good Lord, for what? O! snakes, toads and dung worms! O! the Mackademy! My son Len will be ruin'd!

Enter GOODY TRUMPET *in haste.*

G. Trum. Well there now, husband, I can't, no nor I wont bear it any longer — for would you think it? our Leander is gone crazy, and's a fool, and melirious, and — and —

Old T. Yes, yes, that's as clear as the sun — that I'll vow to any day. He's a fool, and a dog, and crazy, and — and — what was the word you us'd?

G. T. Pshaw! you're a 'tarnal pesterment. You're too old to larn any thing but how to wear horns —

Old T. No, no, that's a lie — I've larnt that a ready —

there's not a ram in the flock that wears horns more tremariously than I do.

G. T. Ha, ha, ha, tremariously, O distravagant! well, my son's a fool and my husband a jack-ass — but hark you, this chip o' yourn, this Mackademicianer, inserts that our tin quart is brim full, when I shook, and shook, and shook every atom, and morsel, and grain of beer out of it — and there was not a bit nor a jot in't any more than there is in his head, not a bit more.

Old T. Ay, ay, I warrant ye, nothing more brovebler — yes, yes, and he told me about the dentity of pinticles in fire — and as how the proximation to fire made the sentiments of heat. Odd's buds! he's ruin'd, he's undone! Well, well, I'll go to the Protector, (Preceptor) I'll pound him — I'll mawl him — I'll see if he'll make Len a fool again —

G. T. Well, well, take him away, take him home, — I'll larn him. If you'll lèt him alone — I believe I can make him know a little something. But the conceptor! I'll strip his head for him — I'll make it as bare as an egg — I'll pull his soul case out.

Old T. Why good George! I sent him to the mackademy to get larning. If this is larning, my dog knows more than the Protector and the Mackademy besides.

Enter LEANDER.

Old T. How now, how now, coxcomb! Why, Len, you're a fool! You're crazy, you're melirious, as your poor mother says.

Leander. Sir, you know you have a right to command your own, but I think, Sir, that the abuse of such power is worse than the want of it. Have I, Sir, deserved such treatment!

Old T. Yes, you have reserved the gallows — ay, ay,

Len, you must be chained in a dark room and fed on bread and water — O the Mackademy!

Leander. You may arraign me, Sir, with impunity for faults which I in some instances have been guilty of — but my improvements in the liberal arts and sciences, have been, I believe, equal to most of my standing, and I am confident, Sir, that I have asserted nothing but what is consistent with the philosophy of our times.

Old T. Your dosolophys may go to Beelzebub, and you may go with them, Sir, and be hang'd, Sir — O the Conceptor, and Mackademy may go to Beelzebub and be hang'd and they will! Come home, Len, you sha'nt go there any more, you'll be ruin'd and undone for ever, and for 'tarnally!

A reader with a special purpose was *The Mental Flower Garden, or an Instructive and Entertaining Companion for the Fair Sex*, New York, 1808. It was full of sugar-coated wisdom and mild sentiment as was befitting in a text-book for "female youth," and no effort was spared to use highly polished and becoming language on all occasions. Its tone was very like that it recommended for "epistolary writing — *easy, genteel and obliging*, with a choice of words which bear the most civil meaning, and a generous and good-natured *complaisance*."

Scott's and Lindley Murray's readers were the only ones by English compilers to be widely circulated in this country. Murray's several readers continued in use until the middle of the nineteenth century. They were stupid-looking, fine-print volumes, full of profundity and never lapsed into the shallow amateurishness of some of our American

school-books. Yet the information imparted was occasionally rather peculiar, as for instance what is said about

The Cataract of Niagara, in Canada, North America.

This amazing fall of a hundred and fifty feet perpendicular is made by the river St. Lawrence, one of the largest rivers in the world, a river that serves to drain the waters of almost all North America into the Atlantic Ocean. It will be readily supposed, that such a cataract entirely destroys the navigation of the stream: and yet some Indians in their canoes, it is said have ventured down it in safety.

I reproduce from Scott's book one of four plates illustrating an introductory chapter, "On the speaking of Speeches at schools." The text advises —

The Speaker.

From Scott's *Lessons in Elocution*, 1814.

Reduced one-half.

If the pupil's knees are not well formed, or incline inwards, he must be taught to keep his legs at as great a distance as possible, and to incline his body so much to that side on which the arm is extended, as to oblige him to rest the opposite leg upon the toe; and this will in a great measure, hide the defect of his make.

When the pupil has got in the habit of holding his hand and arm properly, he may be taught to move it, that is, to raise the arm in the same position as when gracefully taking off the hat. (See Plate.) When the hand approaches to the head, the arm should, with a jerk, be suddenly straightened, at the very moment the emphatical word is pronounced. This co-

incidence of the hand and voice, will greatly enforce the pronunciation.

Below is a part of one of the lighter pieces in *The Common Reader*, by T. Strong, A.M., Greenfield, Massachusetts, 1818.

The Flower Girl.

From Strong's *The Common Reader*, 1818.

Reduced one-third.

THE FLOWER GIRL.

"Pray buy a nosegay of a poor orphan!" said a female voice, in a plaintive and melodious tone, as I was passing the corner of the Hay-market. I turned hastily and beheld a girl about fourteen, whose drapery, though ragged, was clean, and whose form was such as a painter might have chosen for a youthful Venus.

Her neck, without colouring, was white as snow; and her features, though not regularly beautiful, were interesting,

and set off by a transparent complexion; her eyes, dark and intelligent, were shaded by loose ringlets of a raven black, and poured their supplicating beams through the silken shade of very long lashes.

On one arm hung a basket full of roses, and the other was stretched out towards me with one of the rose buds. I put my hand into my pocket and drew out some silver — “take this, my pretty girl,” said I.

The narrator added some kindly and highly moral remarks for her benefit, and she caught his hand and burst into a flood of tears. The actions and the look touched my soul; it melted, and a drop of sympathy fell from my cheek.

“Forgive me, Sir,” said she, while a blush diffused itself over her lovely face. “You will pardon me when I tell you they were the first kind words I have heard since I lost all that was dear to me on earth.”

“Can I leave this poor creature?” said I, pensively. “Shall I quit thee, fair flower, to be blown down by the rude blast of adversity! to droop thy lovely head beneath the blight of early sorrow! No! thou hast once bloomed beneath the cheerful sun of domestic content, and under it thou shalt bloom again.”

My heart beat with its sweet purpose, and the words of triumphant virtue burst from my lips. “Come, thou lovely deserted girl! come and add one more to the happy group who call me father! thou shalt be taught with them that virtue which their father tries to practice.”

Her eyes flashed with frantic joy; she flung herself on her knees before me. I raised her in my arms; I hushed her eloquent gratitude, and led her to a home of happiness and piety; and the poor orphan of the Hay-market is now the partner of my son!

The scene of this story is one of the busiest parts of London; but the illustration which accompanies it shows a New England country road, with three curious little loads of hay standing in a wayside field to suggest a hay-mart.

The Catamountain.

From *The Improved Reader*, 1827.

Here is a lesson which purports to have been written by a Missourian. It is from Pierpont's *The National Reader*, Boston, 1827.

The Worm.

Who has not heard of the rattle-snake or copperhead! An unexpected sight of either of these reptiles will make even the lords of creation recoil: but there is a species of worm found in various parts of this state, which conveys a poison of a nature so deadly, that, compared with it, even the venom of the rattlesnake is harmless. To guard our readers against this foe of human kind, is the object of this communication.

This worm varies much in size. It is frequently an inch through, but, as it is rarely seen, except when coiled, its length can hardly be conjectured. It is of a dull leaden colour, and generally lives near a spring or small stream of water, and bites the unfortunate people, who are in the *habit of going there to drink*. The brute creation it never molests. They avoid it with the same instinct that teaches the animals of Peru to shun the deadly coya.

Several of these reptiles have long infested our settlements, to the misery and destruction of many of our fellow-

citizens. I have, therefore, had frequent opportunities of being the melancholy spectator of the effects produced by the subtle poison which the worm infuses.

The symptoms of its *bite* are terrible. The eyes of the patient become red and fiery, his tongue swells to an immoderate size, and obstructs his utterance; and delirium of the most horrid character, quickly follows. Sometimes, in his madness, he attempts the destruction of his nearest friends.

If the sufferer has a family, his weeping wife and helpless infants are not unfrequently the objects of his frantic fury. In a word, he exhibits all the detestable passions that rankle in the bosom of a savage; and such is the *spell* in which his senses are locked, that, no sooner has the unhappy patient recovered from the paroxysm of insanity, occasioned by the bite, than he seeks out the *destroyer*, for the sole purpose of being *bitten again*.

I have seen a good old father, his locks as white as snow, his steps slow and trembling, beg in vain his only *son* to quit the lurking place of the worm. My heart bled when he turned away; for I knew the fond hope, that his son would be the "staff of his declining years," had supported him through many a sorrow.

Youths of Missouri, would you know the name of this reptile? It is called the *Worm of the Still*.

The next selection is from *The General Class-Book*, Greenfield, Massachusetts, 1828.

Dialogue between Mrs. Lackwit, Mrs. Goodsense, etc.

MRS. LACKWIT. Scat you little beast! See that kitten. She has been patting my ball of yarn, and rolling it all over the floor, till it is half unwound. There, take that box in the ear, and learn better manners.

CAROLINE. Poor kitten! I am afraid, mother, you have hurt her.

MRS. L. Hurt her? I meant to, and I wish I had killed her.

Now that robin sets up his tune, which I suppose we must hear till sunset. The old rooster too must come and crow like thunder at the very door, so that I cannot hear myself speak; and to crown all, somebody has let the calves into the yard, and there they are galloping and racing over the table-cloths, which I had laid out to bleach. O, what a world we live in.

Caroline, cannot you be still? Do mind your needle. Surely we have noise enough without your singing or playing.

CAR. Dear mother, I am afraid you are not well. Does your head ache?

MRS. L. No; but my ears ache; and my heart akes.

MRS. GOODSENSE. My dear Mrs. Lackwit, as your children have been confined six hours in school to-day, would it not be well to let them go and play a little while in the yard?

MRS. L. No; the girls would be tanned, and become black as negroes, and the boys would be more noisy than ever. Mrs. Goodsense, how can you live with your eight children? I have only four, and it often seems as if I should be distracted.

Then Mrs. Goodsense explains and advises, and finally, Mrs. Lackwit concludes she will follow her neighbor's example.

One book of a very unusual sort was Comstock's *Rhythmical Reader*, Philadelphia, 1832. While the latter half is not unlike other books of its class, the earlier pages are an appalling mass of cabalistic signs. It is an endeavor by a system of notation to treat

discourse like music, and to teach how to read with perfect ease and rhythm.

PART OF THE EPISCOPAL BURIAL SERVICE.

FROM THE BOOK OF COMMON PRAYER.

Rather slow.

3 | I am the | res ur- | rection | and the | life, |
 | saith the | Lord ; | he that be- | lieveth in | me, |
 | though he were | dead, | yet shall he | live ; |

Specimen Lines.

From Comstock's *The Rhythmical Reader*, 1832

Another unusual reader of about the same date was *The Christian Reader*, a stout volume, entirely made up of tracts, except for a half-dozen hymns inserted at the end.

Still another peculiar reader was *The Farmer's School-Book*, Albany, 1837, "published to take the place of such useless, unintelligible reading as Murray's *English Reader*, and other readers in common use, which never give the children one useful idea for the practical business of life." The book conveys a good deal of information, but I am afraid the author was disappointed in his expectation that "Chymistry, The Nature of Manures, Raising Calves, Making and Preserving Cheese," and similar topics which filled out the list of chapters would

“seize the feelings and get the attention of every child that is learning to read.”

A Picture.

From Emerson's *The Second-class Reader*, 1833, illustrating a popular poem which began :

You are old, Father William, the young man cried,
The few locks which are left you are gray ;
You are hale, Father William, a hearty old man ;
Now tell me the reason, I pray.

In the days of my youth, Father William replied,
I remembered that youth would fly fast,
And abused not my health and my vigor at first,
That I never might need them at last.

A volume of more than ordinary interest was *The Monitorial Reader*, Concord, New Hampshire, 1839, and from it I make a number of excerpts.

That Red Stuff.

Father, said a little boy, in the lisping accents of youth, what is that red stuff you have just been drinking, and

which makes you wink so? What do you call it? Hush, my son, it is *medicine*. This inquiry was put by a sweet looking child, as I was entering the door of a grocery to purchase a few articles for my family.

The tradesman had just drained his glass, and leaning on a cask, in which was burned the word *Brandy*, was wiping his mouth on the sleeve of his coat; while the little one stood watching his motions with a sweet affectionate look of the son, blended with the curiosity and simplicity of childhood. "Excuse me," said I, "but oh, tell your innocent reprover, that *it biteth like a serpent and stingeth like an adder*. Deceive him not."

The man looked abashed and with a private admonition, I left him.

The lesson closes with appropriate comments, but what the drinker did is not stated.

Sir Nicholas Gimcrack who "spread himself out on a large table, and placing before him a bason of water with a frog in it, he struck with his arms and legs as he observed the animal do." Thus he learned "to swim on dry land; but he never ventured himself in the water."

From *The Intelligent Reader*, 1834.

A Retired Sailor "instructing his sister's grand-children."

From Adams's *The Monitorial Reader*, 1839.

Borrowing.

"My dear," said Mrs. Green to her husband one morning, "the meal we borrowed from Mr. Black a few days ago, is almost out, and we must bake to-morrow."

"Well," said her husband, "send and borrow a bushel at Mr. White's; he sent to mill yesterday."

"And when it comes, shall we return the peck we borrowed more than a month ago from the widow Grey?"

"No," said the husband gruffly, "she can send for it when she wants it. John do you go down to Mr. Brown's and ask him to lend me his axe to chop some wood this forenoon; ours is quite dull, and I saw him grinding his last night. And James, do you go to Mr. Clark's, and

ask him to lend me a hammer — and you may as well borrow a few nails, while you are about it.”

A little boy now enters and says, “Father sent me to ask if you had done with his hoe, which you borrowed a week ago last Wednesday; he wants to use it.”

“Wants his hoe, child? What can he want with it? I have not half done with it. Tell him to send it back, though, as soon as he can spare it.”

They sit down to breakfast. “O la!” exclaims Mrs. Green, “there is not a particle of butter in the house — James, run over to Mrs. Notable’s, she always has excellent butter in her dairy, and ask her to lend me a plateful.”

After a few minutes James returns; “Mrs. Notable says she has sent you the butter, but begs you to remember, that she has already lent you *nineteen* platefuls, which are scored on the dairy door.”

“Nineteen platefuls,” exclaimed the astonished Mrs. Green, holding up both her hands; “it is no such thing — I never had half that quantity; and if I had, what is a little plateful of butter? I should never think of keeping an account of such a trifling affair — I declare, I have a great mind never to borrow any thing of that mean creature again, as long as I live.”

The narrative goes on to relate other borrowing episodes in the Green family, and closes with the statement that —

After all, the lowest, the most degraded class of borrowers, are NEWSPAPER BORROWERS; fellows who have not soul enough to subscribe for a newspaper, yet long to know its contents; who watch with lynx-eyed vigilance for the arrival of the mail, and when their more generous neighbor receives his paper, send their boys with messages like the following.

“Mr. Borrowall wishes you would be kind enough to lend him your paper for *one minute*. There is something particular in it, that he wants to see; he'll send it back before you want to read it.”

The Pot of Baked Beans.

O! how my heart sighs for my own native land,
Where potatoes and squashes and cucumbers grow;
Where cheer and good welcome are always at hand,
And custards and pumpkin pies smoke in a row;
Where pudding the visage of hunger serenest,
And what is far dearer, the pot of *bak'd beans*.

Let Maryland boast of her dainties profuse,
And large water-melons, and cantelopes fine;
Her turtle and oysters, and terrapin stews,
And soft crab high zested with brandy and wine;
Ah! neither my heart from my native land weans;
Where smokes on the table the pot of *bak'd beans*.

The pot of *bak'd beans*! with what pleasure I saw it,
Well season'd, well pork'd by some rosy fac'd dame;
And when from the glowing hot oven she'd draw it,
Well crisp'd and well brown'd to the table it came;
O, give me my country, the land of my teens,—
Of the dark Indian pudding, and pot of *bak'd beans*.

The pot of *bak'd beans*! Ah, the muse is too frail,
Its taste to descant on, its virtues to tell;
But look at the sons of New-England so hale,
And her daughters so rosy — 'twill teach thee full well;
Like me it will teach thee to sigh for the means
Of health, and of rapture! — the pot of *bak'd beans*.

Making the Preliminary Bow to the Audience.

From Lovell's *The Young Speaker*, 1844.

The most interesting feature of Lovell's *The Young Speaker*, New Haven, 1844, was the numerous pictures. The book, as a whole, was planned for a school reader, but it was the purpose of the pictures to "inculcate the art of graceful and eloquent gesture." The first of the two engravings reproduced

presents the side view of a boy making his bow before an audience. With a gentle but assured step, he approaches to near the front of the platform, a little on the right of the centre, then pausing for a moment, he casts his eyes with a diffident respect, over the audience; slides out his *left* foot on the toe, in a straight line; then supporting the body on that foot, he draws in the right foot until its *heel* comes into the *middle* or hollow of the *left* foot; he then presses his legs together, and dropping his eyes modestly to the floor, brings his body into a slight and graceful curve, the *arms* hanging perfectly *free*. In this posture the body is kept for an instant; he then rises slowly to an erect attitude, and is ready to commence speaking.

An Expressive Attitude.

From Lovell's *The Young Speaker*.

The second cut indicates how to express "painful observation, surprise, alarmed compassion, and the like."

XI

ARITHMETIC

MOST teachers, even in the days of the first settlers, gave some instruction in mathematics, but it was a long time before such instruction was made obligatory. In Massachusetts only reading and writing were required in the elementary schools until the enactment of a law in 1789, which said there must also be arithmetic, the English language, orthography, and decent behavior. Of these added requirements the first was generally felt to be of the most practical importance, and a reputation as an "arithmeticker" was to any teacher a valuable asset. Nothing was more likely to assist a man in getting a school than the ability to do any sum in arithmetic. To be "great in figures" was to be learned.

Books by native writers in all departments had begun to supersede those imported from England, and in place of Hodder's and Dilworth's Arithmetics, the famous treatise by Nicholas Pike of Newburyport, published in that town in 1788, gained wide acceptance — an acceptance aided, no doubt, by the flattering testimonials it received from George Washington and other dignitaries. It was a pretentious 8vo of 512 pages with a range almost encyclopædic, and it served to give tone to all the arithmetic study

of the early district-school period. Rules were omnipresent in it. There was indeed a rule for nearly every page, and many of them were calculated to tax the understanding of a pupil severely to grasp their meaning. Some of the problems, too, required for their mastery a great deal of genuine mathematical capacity.

A majority of the district-school pupils, including practically all the girls, ciphered only through the four fundamentals of addition, subtraction, multiplication, and division, with a short excursion into vulgar fractions. They won distinction among their mates if they penetrated into the mysteries of the Rule of Three; and to cipher through "Old Pike" was to be accounted a prodigy.

The manuscript of this first American arithmetic was ready in 1785, and after the manner of early school-book authors, both in this country and in England, "Nicholas Pike, Esq.," submitted it in that form to various worthies to get their opinions as to its merits. They responded with polite commendations, which, as was usual, were printed in the book. For many years after the volume was issued, it held the foremost place among text-books of its class. A preface in 1793 to an abridged edition, especially prepared for use in the public schools, speaks of the larger book as "That celebrated work, which is now used as a classical book in all the Newengland Universities."

Here are a few items from the table of contents that will give some idea of the ground Pike attempted to cover:—

Extraction of the Biquadrate Root
 Penfions in Arrears at Simple Interest
 Barter
 Alligation Medial
 Of Pendulums
 A Perpetual Almanac
 To find the Time of the Moon's Southing
 Table of the Dominical Letters according to the Cycle
 of the Sun
 To find the Year of Indiction
 Table to find Easter from the year 1753 to 4199
 Plain Oblique Angular Trigonometry
 To measure a Rhombus
 To gauge a maffh Tub
 The Proportions and Tonnage of Noah's Ark.

Congress established "Federal money" on the decimal plan in 1786; but twenty years elapsed before its use became at all general, and Pike treats it as something of a curiosity. English money was our standard. In that denomination accounts were kept, and until after the first decade of the nineteenth century, it continued to have prominent place in our arithmetics. Coins of many kinds were current during the early years of the republic, and the school children had to learn the comparative value of these moneys. Besides Federal money, there were four varying currencies issued by the individual states. Then there were English and Irish coins, and the Continental Johannes, Pistoles, Moidores, Doubloons, etc. The labor involved in the computation of ordinary business transactions at this period was appalling.

I have mentioned the Rule of Three. It was recognized as an arithmetical landmark and I give Pike's definition:—

The Rule of Three teacheth, by having three numbers given, to find a fourth, that shall have the same proportion to the third, as the second to the first.

This is sufficiently clear; but some of the book's explanations are quite unintelligible to the present generation, as for instance:—

When tare, and tret and cloff are allowed.

Deduct the tare and tret, and divide the futtle by 168, and the quotient will be the cloff, which subtract from the futtle, and the remainder will be the neat.

One fails to make any sense out of such a jumble until he reads the definitions appended to it.

Tare is an allowance, made to the buyer, for the weight of the box, barrel, or bag which contains the goods bought.

Tret is an allowance of 4 lb in every 104 lb for waste, duft, &c.

Cloff is an allowance of 2 lb upon every 3 cwt.

Futtle is, when part of the allowance is deducted.

Neat weight is what remains after all allowances are made.

Another rule that has an equally unfamiliar sound to modern ears is this:—

To find the Gregorian Epact.

Subtract 11 from the Julian Epact: If the subtraction cannot be made, add 30 to the Julian Epact; then subtract,

and the remainder will be the Gregorian Epact ; if nothing remain, the Epact is 29.

In the tables of weights and measures are Wine Measure and Ale or Beer Measure in good and regular standing among the rest. These were generally included in all the early school arithmetics. Cloth Measure, as Pike gives it, consists chiefly of Nails, and Ells Flemish, Ells English, and Ells French ; Long Measure starts with "3 Barley corns make 1 inch ;" and in Dry Measure we find "2 Quarts make 1 Pottle, 2 Bufhels make 1 Strike, 2 Strikes make 1 Coom, 2 Cooms make 1 Quarter, 4 Quarters make 1 Chaldron, 5 Quarters make 1 Wey, 2 Weys make 1 Laft." The following paragraph shows the interesting manner in which the author expressed himself when he had a problem to propound :—

An ignorant fop wanting to purchase an elegant house, a facetious gentleman told him he had one which he would sell him on these moderate terms, viz. that he should give him a penny for the first door, 2*d.* for the second, 4*d.* for the third, and so on, doubling at every door, which were 36 in all : It is a bargain, cried the fimpleton, and here is a guinea to bind it ; Pray, what would the house have cost him ? Anf. £286331153 1*s.* 3*d.*

A small book much used in the old schools was *An Introduction to Arithmetic*, by Erastus Root, Norwich, Connecticut, 1796. Queerly enough, it omits fractions, "not because I think them useless," the author explains in his preface, "but because they are not absolutely necessary." He gives unusual space

as compared with other arithmetics of the time to the recently adopted decimal "Federal Money," of which he says: —

It is expected that before many years shall elapse, this method of reckoning will become general throughout the United States. Let us, I beg of you, Fellow-Citizens, no longer meanly follow the British intricate mode of reckoning. — Let them have their own way — and us, ours. — Their mode is suited to the genius of the government — for it seems to be the policy of tyrants, to keep their accounts in as intricate, and perplexing a method as possible; that the smaller number of their subjects may be able to estimate their enormous impositions and exactions. But Republican money ought to be simple and adapted to the meanest capacity. This mode of reckoning may seem a little odd at first, but when the coins of the United States come into circulation, it will soon become familiar.

Copperplate Engraving on the Title-page of Sarjeant's *Arithmetic*, 1788.

Below are two of the shorter problems in the book: —

What is the difference between six dozen dozen and half a dozen dozen? Ans. 792.

What is the difference between twice twenty-five and twice five, and twenty? Ans. 20.

From a similar book, *The Youth's Assistant*: "Being a plain, Easy, and Comprehensive Guide to Practical Arithmetic," published in the same town as Root's and at about the same time, I quote this problem illustrative of old-time travel from tavern to tavern:—

I demand the distance from the Town-house in Norwich, to Bull's in Hartford; supposing it to be nine miles from said Town-house to Aldin's in Lebanon, from Aldin's to White's Andover fourteen, from White's to Marh's East Hartford twelve, from Marh's East Hartford to Benjamin's ditto three, from Benjamin's to Bull's two?

Answer, 40 miles.

A book that rivalled "Old Pike" in popularity was the Arithmetic by Daniel Adams published in 1801. It had large pages, and on these was blank space after each problem for the student to record the process of solution. The preface advises that the operation should be "first wrought upon a slate or waste paper," and afterward transcribed.

Another popular early arithmetic was Nathan Daboll's *Schoolmaster's Assistant*, and I quote from it the several problems which follow:—

Divide $4\frac{1}{2}$ gallons of brandy equally among 144 soldiers.

Ans. 1 gill a-piece.

How much shalloon that is $\frac{3}{5}$ yard wide, will line $5\frac{1}{2}$ yards of camblet which is $1\frac{1}{4}$ yard wide?

Ans. $16\frac{1}{4}$ yds.

* If a pistareen be worth $14\frac{2}{5}$ pence, what are 100 pistareens worth? *Ans.* £6.

A privateer of 65 men took a prize which being equally divided among them, amounted to 119 l. per man; what is the value of the prize? *Ans.* £7735.

Seven gentlemen met at an inn, and were so well pleased with their host, and with each other, that they agreed to tarry so long as they together with their host, could sit every day in a different position at dinner; how long must they have staid at said inn to have fulfilled their agreement?

Ans. $110\frac{170}{865}$ years.

A, B and C, playing at cards, staked 324 crowns; but disputing about tricks, each man took as many as he could; A got a certain number; B as many as A and 15 more; C got a fifth part of both their sums added together: how much did each get? *Ans.* A $127\frac{1}{2}$, B $142\frac{1}{2}$, C 54.

If to my age there added be,
One-half, one-third, and three times three,
Six score and ten the sum will be;
What is my age, pray shew it me?

Ans. 66.

Problems from Walsh's *Mercantile Arithmetic*, Northampton, Massachusetts, 1807:—

If 8 boarders drink a barrel of cider in 12 days, how long would it last if 4 more came among them?

Ans. 8 days.

Three boys, John, James and William, buy a lottery ticket for 3 dols. of which John pays 90 cts. James 1 dol. and William the remainder. This ticket is entitled to a prize of 2000 dollars, subject to a deduction of $12\frac{1}{2}$ per cent. how much is each to receive? *Ans.* John 525 dols. James 583 dols. $33\frac{1}{3}$ cts. William 641 dols. $66\frac{2}{3}$ cts.

What length of cord will fit to tie to a cow's tail, the other end fixed in the ground, to let her have liberty of eating an acre of grafs, and no more, fupposing the cow and tail to be five yards and a half? Anf. 6,136 perches.

A certain perfon married his daughter on new year's day and gave her husband one fhilling towards her portion, promifing to double it on the firft day of every month for one year; what was her portion? Anf. £. 204 15f.

How much will 10 ferons of cochineal come to weighing neat 724 okes 73 rotolas, at 80 piaftres per oke? Anf. 57978,40 piaftres.

How much will 189 bazar mauds 31 feer 8 chittacks of fugar come to, at 6 rupees per maud? Anf. 1138 rupees, 11 annas, 6 pice.

The last two examples deal with foreign weights, measures, and money terms under the head of Exchange. The feveral felections below are from Thompson's *The American Tutor's Guide*, Albany, 1808:—

A man overtaking a maid driving a flock of geese, said to her, how do you do, sweetheart? Where are you going with thefe 100 geese? No Sir, said she, I have not 100; but if I had as many, half as many, and feven geese and a half, I fhould have 100: How many had she? Ans. 37.

A perfon was 17 years of age 29 years fince, and fuppose he will be drowned 23 years hence: Pray in what year of his age will this happen? Ans. In his 69th year.

The illuftration on the next page is one of eight little cuts that helped to elucidate problems in fquare root. No other arithmetic up to this time had employed any cuts fave very formal diagrams.

In the midst of a meadow,
 Well stored with grass,
 I've taken just two acres,
 To tether my ass :
 Then how long must the cord be,
 That feeding all round ;
 He mayn't graze less or more, than
 Two acres of ground.

Ans. $55\frac{1}{2}$ yards.

An Illustrated Problem.

From Thompson's *The American Tutor's Guide*, 1808.

Here is an example from *The Science of Numbers made Easy*, by Leonard Loomis, Hartford, 1816. The hero of it not only was well supplied with money, but had his cash very picturesquely distributed about his person.

Harry told Thomas, that he had got 580,50 cts. (Bank Bills) in his hat, and he had got twice as much in his pocket book ; besides 15,23 cts. silver money in his purse, and four cents that had slipped out of his pocket into his boot ; pray tell me if you can, how much money he had ?

Ans. 1756,77 cts.

From *The Scholar's Arithmetic*, by Jacob Willetts, Poughkeepsie, New York, 1817 : —

When hens are 9 shillings a dozen, what will be the price of 6 dozen of eggs, at 2 cents for 3 eggs ?

Ans. 48 cts.

If the posterity of Noah, which consisted of six persons at the flood, increased so as to double their number in 20 years, how many inhabitants were in the world two years before the death of Shem, who lived 502 years after the flood ?

Ans. 201,326,586.

When first the marriage knot was ty'd
Between my wife and me,
My age was to that of my bride,
As three times three to three.
But now when ten, and half ten years
We man and wife have been,
Her age to mine exactly bears,
As eight is to sixteen;
Now tell, I pray, from what I've said,
What were our ages when we wed?
Ans. { Thy age, when marry'd must have been
{ Just forty-five: thy wife's fifteen.

A workman was hired for 40 days upon this condition, that he should receive 20 cts. for every day he wrought, and should forfeit 10 cts. for every day he was idle; at settlement he received 5 dollars: How many days did he work and how many days was he idle? *Ans.* wrought 30 days, idle 10.

The most remarkable thing about the above example in the extreme moderateness of the man's charge. It seems rather severe to require a forfeit from a man who is working at twenty cents a day.

A large volume "containing Vulgar, Decimal, and Logarithmical Arithmetick," by Beriah Stevens, was published at "Saratoga Springs" in 1822 with a special claim to attention, by reason of a process it introduced for proving the correctness of one's figuring, and which it called "casting out the nines." I reprint the directions for proving subtraction.

Cast the nines out of the minuend, and note down the excess above the nines on a cross; then cast the nines

out of the subtrahend and note the excess as before; lastly cast the nines out of the remainder, and add the excess last found, and the excess of the subtrahend together, and if the sum of both be equal to the excess found in the minuend the work is allowed to be right.

An efficient force in raising the standard of mathematical instruction was the publication of Warren Colburn's *Intellectual Arithmetic* in 1821. Previously all arithmetic had been scarcely intelligible ciphering; but Colburn gives a multitude of simple problems to be done mentally. These cultivated quick comprehension and accuracy, and made it easy to apply what was acquired to the affairs of everyday life. The best teachers lost no time in putting the book into use, and it determined the character of all subsequent text-books. From the very first, its sale was prodigious, and during the next half century more than two million copies were circulated.

Among the books patterned more or less closely after Colburn's was a little volume called the *Franklin Arithmetic*, Springfield, Massachusetts, 1832. This had a moral purpose, and proposed to improve on the other works then in vogue by the use of "questions, the solution of which will convey to the mind some important truth. It seems rather out of place for a teacher to sit down with a pupil to calculate the gain or loss on the sale of gin, or lottery tickets. In one of our excellent and popular books on mathematical science, there are two or three questions which the scholar cannot solve without knowing

how many cards there are in a pack.” To show how the book is made interesting and enlightening, I quote rather freely : —

How many letters in the word JOHN ?

How many in the word SMITH ?

How many letters in both names, JOHN and SMITH ?

How many hands have a boy and a clock ?

In eighteen hundred and thirty-one, 119 persons died of drunkenness in New York, and 137 in Philadelphia; how many in both ?

Hudson's Bay was discovered 10 years before the settlement at Plymouth, and Bagdad was taken by the Turks 18 years after; how long a time passed between ?

Take E from the word HOPE, and how many letters would be left ? and what would it be then ?

A man had seven children; two of them were killed by the fall of a tree; how many had he left ?

A boy played three days in a week; how many did he work ?

Four rivers ran through the garden of Eden, and one through Babylon; how many more ran through Eden than Babylon ?

Judas, one of the twelve apostles, hung himself; how many were there left ?

John Baptist was beheaded after Christ 32 years, and the book of Revelation was written in 87; how long after John was beheaded ?

Adam was 930 years old when he died, and 130 when Seth was born; how old was Seth when Adam died ?

Miss Fanny Woodbury was born in 1791, and died in 1814; Miss Hannah Adams lived to be 53 years older; how old was Hannah Adams ?

“Adonibezek said, 3 score and 10 kings, having their thumbs and their great toes cut off, gather their meat

under my table" (Judges i. 7.); how many thumbs and toes did Adonibezek cut off?

At Surat is a hospital for sick animals, in which there is a tortoise that has been there 75 years; what is $\frac{3}{8}$ of the number?

The Baltimore rail-road cars run 12 miles an hour; what is $\frac{4}{7}$ of it?

A human body, if baked until all moisture is evaporated, is reduced in weight as 1 to 10; a body that weighs 100 pounds living, will weigh how much when dry?

The book closes with an appendix of biographical paragraphs containing facts relating to persons referred to in the problems. The paragraphs are of this sort:—

HOMER lived in Greece about 3 thousand years ago; he was a school teacher and a poet. He wrote two poems, one called the Iliad, which is an exhibition of bodily strength; the other called the Odyssey, which is an exhibition of the strength of the mind.

WILLIAM SHAKESPEARE is distinguished as a writer of dialogues. He lived in England; when a boy, he fell in company with bad boys, who stole some deer, and were punished; he was obliged to leave home; he went to London, and brought himself into notice by taking so good care of the horses of those that came to the theatre.

ALEXANDER THE GREAT was a great warrior; he conquered the world, and wept because there were no more worlds to conquer. He then gave himself up to dissipation, and died in a fit of debauch.

MISS FANNY WOODBURY died in Beverly, Mass. She was an eminently pious young lady. Her life is printed, and is a very interesting book for young ladies to read.

MISS HANNAH ADAMS was a native of Massachusetts. She had a feeble constitution, and never went to school much; she studied and read by herself, and acquired much knowledge.

5. One stage has four horses. How many horses have two stages?

6. Then 2 times 4, or *twice* 4 are how many?

7. Here are three boats, and each boat contains three men. How many men in all?

8. 3 times 3 are how many?

Part of a Page.

From Barnard's *A Treatise on Arithmetic*, 1830.

The earliest arithmetic I have seen that used pictures as an aid to beginners was Barnard's, published at Hartford in 1830. The book claimed to be "rendered entertaining to the pupil by a great variety of amusing problems." Some of these took the form of a continued story, as:—

1. John made 3 marks on one leaf of his book, and six on another. How many marks did he make?

2. His teacher punished him, for soiling the book, by giving him 4 blows on one hand, and 5 on the other. How many blows did he strike him?

3. 7 boys laughed at him on one side of the house, when he was punished, and 2 on the other. How many boys laughed?

See this flock of black-birds: they have lighted upon the bars of a gate, and are all singing together. Find how many there are on each separate bar.

An Illustration.

From Lesson First of Emerson's *The North American Arithmetic*, Part First, 1838

The pictures were confined to the early lessons in the first pages, and the book as a whole was designed for the older pupils. We had no primary arithmetics until 1838, when Emerson's *The North American Arithmetic*, Part First, appeared with illustrations scattered all through it. This was a genuine beginner's book of the modern type. The preface deprecated the fact that "the practice of postponing arithmetic till children arrive at the age

of nine or ten years still prevails in many of our schools," and the bright little volume no doubt fulfilled the author's hope that it "would make the study both profitable and pleasant for young learners."

5 boys came up to recite, but 2 of them were sent back for having no lessons. How many recited?

There were 7 farmers, 3 of whom drank rum and whisky, and became miserable; the rest drank water, and were healthy and happy. How many drank water?

Two Examples in Subtraction.

From Emerson's *The North American Arithmetic*, Part First

The final quotation in this chapter is one of many jingles in Underhill's *New Table-Book*, 1846.

Two pennies had John
His sister had 1,
They gave them to me,
And then I had 3,
Thus you may see
That 2 and 1 make 3.

XII

THE FIRST AMERICAN GEOGRAPHY

IN colonial days geography was spoken of as "a diversion for a winter's evening," and acquaintance with it was considered an accomplishment rather than a necessity. Some rudimentary instruction in the science was occasionally given at the more advanced schools, but the topic was not taken up in the elementary schools until after the Revolution. A knowledge of it was first made a condition for entering Harvard in 1815, and a dozen years more elapsed before Massachusetts named it among the required studies in the public schools. To begin with, it was not introduced as a separate study, but the books were used as readers. The same was true of the early school histories. However, geography presently won a place of its own and kept it in spite of the protests that the scholars' attention was thereby being taken away from "cyphering."

The pioneer of American authors of school geographies was Jedidiah Morse. On the title page of most editions of his books his name was appended with "D. D. Minister of the Congregation in Charlestown, Massachusetts." He was born in 1761, graduated from Yale in 1783, and the year following published at New Haven his first geogra-

phy. Later he put forth several other geographies, large and small, became a compiler of gazetteers, wrote various important historical and religious works, was one of the founders of Andover Theological Seminary, and for more than thirty years

Jedidiah Morse.

served as pastor of the First Church in Charlestown. He won fame not only in his own country, but was recognized abroad as a man of distinguished attainments, and a number of his books were translated into French and German. His *Geography*

Made Easy, a small leather-bound 12mo of about four hundred pages, was for many years by far the most popular text-book dealing with this subject. My copy, dated 1800, is dedicated

TO THE
Young Masters and Misses
Throughout the UNITED STATES

Two maps of double-page size are the only illustrations — one a map of the world, the other of North America.

GEOGRAPHY MADE EASY.

A Heading.
From an edition of 1800.

The earlier pages treat of the "Doctrine of The Sphere, Of Astronomical Geography, Of Globes and their Use," etc. But soon we come to the *History of the Discovery of America*, and then to a *General Description of America*." In the latter chapter is much that is interesting and picturesque.

It includes, as do all the early geographies, a good many imaginative travellers' tales picked up from newspapers and other chance sources without any pains being taken to verify them or to inquire as to the reliability of their authors. In fact, it sometimes seems as if the more fabulous the story the better its chance to be recorded in the school text-books. We get very entertaining glimpses of the limitations of geographical knowledge at the time in the following extracts from Morse.

The *Andes*, in South America, stretch along the Pacific Ocean from the Isthmus of Darien to the Straits of Magellan. The height of Chimborazo, the most elevated point in this vast chain of mountains is 20,280 feet, above 5000 feet higher than any other mountain in the known world.

North America has no remarkably high mountains. The most considerable are those known under the general name of the *Allegany Mountains*. These stretch along in many broken ridges under different names from Hudson's River to Georgia. The *Andes* and the *Allegany Mountains* are probably the same range interrupted by the Gulf of Mexico.

Who were the first people of America? And whence did they come? The Abbe Clavigero gives his opinion in the following conclusions:—

“The Americans descended from different nations, or from different families dispersed after the confusion of tongues. No person will doubt the truth of this, who has any knowledge of the multitude and great diversity of the American languages. In Mexico alone *thirty-five* have already been discovered.”

But how did the inhabitants and animals originally pass to America?

The quadrupeds and reptiles of the new world passed there by land. This fact is manifest from the improbability and inconsistency of all other opinions.

This necessarily supposes an ancient union between the equinoxial countries of America and those of Africa, and a connexion of the northern countries of America with Europe on the E. and Asia on the W. The beasts of cold climates passed over the northern isthmuses, which probably connected Europe, America, and Asia; and the animals and reptiles peculiar to hot countries passed over the isthmus that probably connected S. America with Africa. Various reasons induce us to believe that there was formerly a tract of land which united the most eastern part of Brazil to the most western part of Africa; and that all the space of land may have been sunk by violent earthquakes, leaving only some traces of it in that chain of islands of which Cape de Verd, Ascension, and St. Matthew's Island make a part. In like manner, it is probable, the northwestern part of America was united to the northeastern part of Asia, and the northeastern parts of America to the northwestern parts of Europe, by Greenland, Iceland, etc.

QUADRUPEDE ANIMALS within the United States:

Mammoth. This name has been given to an unknown animal, whose bones are found in the northern parts of both the old and new world. From the form of their teeth, they are supposed to have been carnivorous. Like the elephant they were armed with tusks of ivory; but they obviously differed from the elephant in size; their bones prove them to have been 5 or 6 times as large.

A late governor of Virginia, having asked some delegates of the Delawares what they knew respecting this animal; the chief speaker informed him that it was a tradition handed down from their fathers, "That in ancient times a herd of them came to the Big-bone licks, and began an universal destruction of the bears, deer, elks, buffaloes, and

other animals which had been created for the use of the Indians; that the Great Man, above, looking down, and seeing this, was so enraged that he seized his lightning, descended to the earth, seated himself upon a neighboring mountain, on a rock, on which his seat and the print of his feet are still to be seen, and hurled his bolts among them till the whole were slaughtered, except the big bull, who, presenting his forehead to the shafts, shook them off as they fell; but at length, missing one, it wounded him in the side; whereupon, springing round, he bounded over the Ohio, the Wabash, the Illinois, and finally over the great lakes, where he is living at this day."

Sapajon, Sagoin. There are various species of animals said to inhabit the country on the lower part of the Mississippi, called Sapajons and Sagoins. The former are capable of supporting themselves by their tails; the latter are not. They have a general resemblance to monkeys, but are not sufficiently known to be particularly described.

The sapajon and sagoin are not as mythical as might be fancied from what the book says of them. They both belong to the monkey tribe, but dwell in South America instead of on the lower Mississippi. Another curious item is this:—

Grey Squirrels sometimes migrate in considerable numbers. If in their course they meet with a river, each of them takes a shingle, piece of bark, or the like, and carries it to the water; thus equipped they embark, and erect their tails to the gentle breeze, which soon wafts them over in safety; but a sudden flaw of wind sometimes produces a destructive shipwreck.

Fifty "quadrupede" animals are described in all, and then we have a section devoted to "Birds."

Next "Amphibious Reptiles" are considered, after that "Serpents," and finally "Fishes." Here are sample paragraphs:—

The *Wakon Bird*, which probably is of the same species with the Bird of Paradise, receives its name from the ideas the Indians have of its superior excellence; the Wakon Bird being in their language the bird of the Great Spirit. Its tail is composed of four or five feathers, which are three times as long as its body, and which are beautifully shaded with green and purple. It carries this fine length of plumage in the same manner as the peacock does his, but it is not known whether, like him, it ever raises it to an erect position.

The *Whitfaw* is of the cuckow kind, being a solitary bird, and scarcely ever seen. In the summer months it is heard in the groves, where it makes a noise like the filing of a saw.

Of the *Frog* kind are many species. Pond frog, green fountain frog, tree frog, bull frog. Besides these are the dusky brown, spotted frog of Carolina; their voice resembles the grunting of swine. The bell frog, so called, because their voice is fancied to be exactly like that of a loud cow bell. A beautiful green frog whose noise is like the barking of little dogs, or the yelping of puppies. A less green frog, whose notes resemble those of young chickens. Little gray speckled frog, who make a noise like the striking of two pebbles together under the surface of the water. There is yet an extremely diminutive species of frogs, called by some, Savanna crickets, whose notes are not unlike the chattering of young birds or crickets. They are found in great multitudes after plentiful rains.

The *Alligator* is a very large, ugly, terrible creature, of prodigious strength, activity, and swiftness in the water. They are from 12 to 23 feet in length; their bodies are as

large as that of a horse. The head of a full-grown alligator is about three feet long, and the mouth opens nearly the same length. The upper jaw only, moves, and this they raise so as to form a right angle with the lower one. They open their mouths while they lie basking in the sun, on the banks of rivers and creeks, and when filled with flies, musketoos and other insects, they suddenly let fall their upper jaw with surprising noise, and thus secure their prey.

The *Rattle Snake* may be ranked among the largest serpents in America. If pursued and overtaken, they instantly throw themselves into the spiral coil; their whole body swells through rage, their eyes are red as burning coals, and their brandishing forked tongues, of the colour of the hottest flame, menaces a horrid death.

The *Joint Snake*, if we may credit Carver's account of it, is a great curiosity. Its skin is as hard as parchment, and as smooth as glass. It is beautifully streaked with black and white. It is so stiff, and has so few joints, and those so unyielding, that it can hardly bend itself into the form of a hoop. When it is struck, it breaks like a pipe-stem; and you may, with a whip, break it from the tail to the bowels into pieces not an inch long, and not produce the least tincture of blood.

Other snakes mentioned are the "Water Viper, with a sharp thorn tail, Hog nose Snake, Coach Whip Snake, which the Indians imagine is able to cut a man in two with a jerk of its tail, Ribbon Snake, Glass Snake, and Two-headed Snake."

In the list of fishes are noted the "Skip jack, Minow, Shiner, Dab, Hard Head and Mummy-chog." Of the Lamprey it is affirmed that

After the spawning season is over, and the young fry have gone down to the sea, the old fishes attach themselves

to the roots and limbs of trees, which have fallen or run into the water, and there perish. A mortification begins at the tail, and proceeds upwards to the vital part. Fish of this kind have been found at Plymouth, in New Hampshire, in different stages of putrification.

When the general characteristics of the United States have been dealt with, New England is taken up, and we are informed that in this portion of the republic —

Learning is more generally diffused than in any other part of the globe; arising from the excellent establishment of schools in almost every township and smaller district.

A very valuable source of information to the people is the Newspapers, of which not less than thirty thousand are printed every week, in New England.

Apples are common, and cider constitutes the principal drink of the inhabitants.

Each state is described in detail, including such topics as "Religion, Military Strength, Literature, Curiosities, Constitution, and History." Bridges are constantly referred to — even those over the smaller rivers. We learn, for instance, that across the Piscataqua in New Hampshire a few miles above Portsmouth "has been erected the most respectable bridge in the United States, 2600 feet in length," at a cost of nearly seventy thousand dollars. In Massachusetts ten bridges are listed that "merit notice," and, it is added, "These bridges are all supported by a toll."

Harvard University, the book says, "consists of four elegant edifices," and we are told that "In Wil-

The First American Geography.

Size of book, 12mo.

liamstown is another literary institution started in 1790, partly by lottery and partly by the liberal donation of gentlemen of the town." Boston had seven schools supported wholly at the public expense, "and in them the children of *every* class of citizens freely associate." Three of these were "English grammar schools in which the children of *both* sexes, from seven to fourteen years of age are instructed in spelling, accenting, and reading the English language with propriety; also in English grammar and composition, together with the rudiments of geography." In three schools "the same children are taught writing and arithmetic. The schools are attended alternately, and each of them is furnished with an Usher or Assistant. The masters of these schools have each a salary of 666 2-3 dollars per annum payable quarterly." Lastly there was the "Latin grammar school" to which "none are admitted till ten years of age."

The inhabitants of Boston at this time numbered 24,937. As usual in speaking of important places a list is given of the "public buildings." There were "18 houses for public worship, the state house, court house, gaol, Faneuil Hall, a theatre, an alms house, and powder magazine." The principal manufactures of the town were "rum, beer, paper hangings, loaf sugar, cordage, sail cloth, spermaceti and tallow candles, and glass."

The final states to be considered in the New-England section are "Rhode Island and Providence Plantations," and Connecticut. Perhaps the most interesting bit in this portion is the statement that

to Hartford, at the head of ship navigation on the Connecticut River, was brought in boats the produce of the country for two hundred miles above. Railroads were as yet undreamed of, and right through the book navigable streams and canals are treated as of far more importance than they would be at present.

Morse in his first edition devoted a paragraph to the "Connecticut Inhabitants." Whether he abandoned it because it gave offence, I do not know. It says: —

The people of this state are generally industrious sagacious husbandmen; generous and hospitable to strangers, and good neighbours. But they are characterised for being intemperately fond of law suits and little petty arbitrations. The ladies are modest, handsome, and agreeable, fond of imitating new and extravagant fashions, neat and chearful, and possessed of a large share of delicacy, tenderness and sensibility. The above character may with justice be given to the ladies of the four New-England States.

Now we come to "*The SECOND GRAND DIVISION of the UNITED STATES.*" It comprised New York, New Jersey, Pennsylvania, Delaware, and "Territory N. W. of the Ohio." Special attention is paid to the climate of this tract, which the book says has

but one steady trait, and that is, it is uniformly variable. The changes of weather are great, and frequently sudden. On the whole, it appears that the climate is a compound of most of the climates of the world. It has the moisture of Ireland in spring; the heat of Africa in summer; the temperature of Italy in June; the sky of Egypt in autumn;

the snow and cold of Norway in winter; the tempests (in a certain degree) of the West Indies, in every season; and the variable winds and weather of Great Britain in every month in the year.

From this account of the climate, it is easy to ascertain what degrees of health, and what diseases prevail. As the inhabitants have the climate, so they have the acute diseases of all the countries that have been mentioned.

Concerning New York City, the book says:—

A want of good water has been a great inconvenience to the citizens; there being but few wells in the city. Most of the people are supplied every day with fresh water conveyed to their doors in casks, from a pump at the head of Queen-street, which receives it from a spring almost a mile from the centre of the city. This well is about 20 feet deep, and 4 feet diameter. The average quantity drawn daily from this remarkable well, is 110 hogfheads of 130 gallons each. In some hot summer days, 216 hogfheads have been drawn from it, and what is very singular, there is never more or less than about three feet of water in the well. The water is sold commonly at three pence a hogfhead at the pump. The Manhattan Company was incorporated in 1798, for the purpose of conveying good water into the city, and their works are now nearly completed.

New York then had a population of sixty thousand, which included about three thousand slaves.

In describing the "Territory N. W. of the Ohio" a list is given of its forts "established for the protection of the frontiers," and we are told that

both the high and low lands produce vast quantities of natural grapes, of which the settlers universally make a sufficiency, for their own consumption, of rich red wine. It is

asserted that age will render this wine preferable to most of the European wines. Cotton is the natural production of this country, and it grows in great perfection.

Below are fragments of information about the Southern States, "*The THIRD and much the largest GRAND DIVISION of the UNITED STATES.*"

The city of WASHINGTON stands at the junction of the rivers Patomak and the Eastern Branch. The situation of this metropolis is upon the great post road, equi-distant from the northern and southern extremities of the Union. The public offices were removed to this city in the summer of 1800, and here in future Congress will hold their sessions.

In the flat country near the sea-coast of North Carolina, the inhabitants, during the summer and autumn, are subject to intermittent fevers, which often prove fatal. The countenances of the inhabitants during these seasons, have generally a pale yellowish cast, occasioned by the prevalence of bilious symptoms.

A few years since, Tennessee abounded with large herds of wild cattle, improperly called Buffaloes; but the improvident or ill-disposed among the first settlers, have destroyed multitudes of them, out of mere wantonness. They are still to be found on some of the south branches of Cumberland river. Elk or moose are seen in many places, chiefly among the mountains. The deer are become comparatively scarce; so that no person makes a business of hunting them for their skins only. Enough of bears and wolves yet remain.

In Maryland, Virginia, and North-Carolina the inhabitants are excessively fond of the diversion of horse racing. Every spring and fall they have stated races for three or four days, which collect the sporting gentlemen from every part of the country from 100 to 200 miles. Every poor peasant

ant has an horse or two and all the family in ruins, with scarcely any covering or provisions; while the nag, with two or three Negroes rubbing him, is pampered with luxuries to the extreme of high living.

This last item is from the edition of 1784. I make one more quotation from that edition under the heading, "Spanish Dominions in N. America," — that is, Florida and Mexico, — and then resume consideration of the later book.

In California, there falls in the morning a great quantity of dew, which, settling on the rose-leaves becomes hard like manna, having all the sweetness of refined sugar, without its whiteness.

The greatest curiosity in the city of Mexico, is their floating gardens. When the Mexicans, about the year 1325, were subdued by the Colhuan and Tepanecan nations, and confined to the small islands of the lake, having no land to cultivate, they were taught by necessity to form movable gardens, which floated on the lake. Their construction is very simple. They take willows and the roots of marsh plants, and other materials which are light, and twist them together, and so firmly unite them as to form a sort of platform, which is capable of supporting the earth of the garden. Upon this foundation they lay bushes and over them spread the mud which they draw up from the bottom of the lake. Their figure is quadrangular; their length and breadth various, but generally about 8 rods long and 3 wide; and their elevation from the surface of the water is less than a foot. These were the first fields that the Mexicans owned, after the foundation of Mexico; there they first cultivated the maize, great pepper and other plants necessary for their support. From the industry of the people these fields soon became numerous. At present

they cultivate flowers and every sort of garden herbs upon them. In the largest gardens there is commonly a little tree and a little hut, to shelter the cultivator, and defend him from the rain or the sun. When the owner of a garden wishes to change his situation, to get out of a bad neighborhood, or to come near to his family, he gets into his little boat, and by his own strength alone, if the garden is small, or with the assistance of others if it be large, conducts it wherever he pleases.

Among the islands off the coast of South America that are described is "Juan Fernandes 300 miles west of Chili," famous for its connection with Defoe's *Robinson Crusoe*. The book tells how Alexander Selkirk dwelt there and how he was finally rescued, concluding with:—

During his abode on this island he had killed 500 goats, which he caught by running them down; and he marked as many more on the ear, which he let go. Some of these were caught 30 years after, their venerable aspect and majestic beards discovering strong symptoms of antiquity.

Selkirk upon his return to England, was advised to publish an account of his life and adventures. He is said to have put his papers into the hands of Daniel Defoe, to prepare them for publication. But that writer, by the help of those papers, and a lively fancy transformed Alexander Selkirk into Robinson Crusoe, and returned Selkirk his papers again; so that the latter derived no advantage from them.

Part I of the geography closes with "New Discoveries," which it declares "have been numerous and important." Here is one:—

The Northern Archipelago.] This consists of several groups of islands situated between the eastern coast of Kamtschatka and the western coast of America.

The most perfect equality reigns among these islanders. They feed their children when very young, with the coarsest flesh, and for the most part raw. If an infant cries, the mother immediately carries it to the sea side, and, whether it be summer or winter, holds it naked in the water until it is quiet. This custom is so far from doing the children any harm that it hardens them against the cold, and they go barefooted through the winter without the least inconvenience. The least affliction prompts them to suicide; the apprehension of even an uncertain evil, often leads them to despair; and they put an end to their days with great apparent insensibility.

A little farther on we find this about the people of the Friendly Islands:—

Their great men are fond of a singular kind of luxury, which is, to have women sit beside them all night, and beat on different parts of their body until they go to sleep; after which, they relax a little of their labour, unless they appear likely to wake; in which case they redouble their exertions, until they are again fast asleep.

Part II is devoted to the eastern hemisphere. I quote two paragraphs about Lapland:—

The employment of the women consists in making nets for the fishery, in drying fish and meat, in milking the reindeer, in making cheese, and in tanning hides; but it is understood to be the business of the men to look after the kitchen, in which, it is said, the women never interfere.

When a Laplander intends to marry a female, he, or his

friends, court her father with brandy; when with some difficulty he gains admittance to his fair one, he offers her a beaver's tongue, or some other eatable, which she rejects before company, but accepts of in private.

The father evidently enjoyed his part of the courting and was loath to end his free supply of liquor. "This prolongs the courtship sometimes for three years," says the book.

I expected when I turned to the pages devoted to Asia that I would find rats named as an article of Chinese diet, but the rat myth seems to have been of later growth. None of the geographies refer to it until Peter Parley in 1830 shows a picture of a pedler "selling rats and puppies for pies." In spite of this lack Morse's information about the Chinese is by no means uninteresting, as will be seen by the cullings which follow:—

The Chinese have particular ideas of beauty. They pluck up the hairs of the lower part of their faces by the roots with tweezers, leaving a few straggling ones by way of beard. Their complexion towards the north, is fair, towards the south, swarthy; and the fatter a man is they think him the handsomer.

Language.] The Chinese language contains only 330 words, all of one syllable: but then each word is pronounced with such various modulations, and each with a different meaning, that it becomes more copious than could be easily imagined, and enables them to express themselves very well, on the common occasions of life.

The Chinese pretend, as a nation, to an antiquity beyond all measure of credibility; and their annals have been carried beyond the period to which the scripture chronology

affirms the creation of the world. Poan Kou is said by them to have been the first man; and the interval of time betwixt him and the death of the celebrated Confucius, which was in the year before Christ, 479, has been reckoned from 276,000 to 96,961,740 years.

The descriptions of Africa in Morse's book lack definiteness, except as regards Egypt and the north coast. The rest of the continent, "from the Tropic of Cancer to the Cape of Good Hope," is handled in a single lump. Of the inland countries Abyssinia receives most attention, and we are told that—

The religion of the Abyssinians is a mixture of Christianity, Judaism and Paganism; the two latter of which are by far the most predominant. There are here more churches than in any other country, and though it is very mountainous, and consequently the view much obstructed, it is very seldom you see less than 5 or 6 churches. Every great man when he dies, thinks he has atoned for all his wickedness, if he leaves a fund to build a church, or has one built in his life-time.

The churches are full of pictures slovenly painted on parchment, and nailed upon the walls. There is no choice in their saints, they are both of the Old and New Testament, and those that might be dispensed with from both. There is St. Pontius Pilate and his wife; there is St. Baalam and his ass; Sampson and his jaw bone, and so of the rest.

It makes the beginning of the nineteenth century seem very barbaric when we read a few pages farther on that—

In the Guinea or western coast, the English exchange their woolen and linen manufactures, their hard ware and

spirituous liquors, for the persons of the natives. Among the Negroes, a man's wealth consists in the number of his family, whom he sells like so many cattle, and often at an inferior price.

One page near the close of the volume estimates the number of inhabitants in the world and forecasts the probable population of the United States a century later. It supposes that the number will double every twenty years, and that therefore in 1900 we should be a nation of 160 millions.

In this forecast and in some other respects our author fails to hit the mark, but whatever the book's shortcomings, it was not dull, and it did admirable service in introducing an important study into the old-time schools.

XIII

LATER GEOGRAPHIES

THE old-time geographies until nearly the middle of the last century were never larger than 12mos and some of them were diminutive 32mos. Up to 1820 they were as a rule bound in full leather, but occasionally the wood or binder's board of the sides was covered with dull blue or marbled paper. Buff-tinted papers with the title and more or less other printing on them were substituted on nearly all the later books. Illustrations also began to be used, at first sparingly, but soon very generously; and instead of being designed for the older pupils the books were made with special reference to the needs of the younger children.

For a score of years after geographies began to be introduced into the schools they depended largely on the use of a globe to make clear the divisions of the earth. It was not long, however, before nearly every book was accompanied by an atlas, and this continued customary to about 1850. Not many of these atlases have survived. They were flimsily made, with paper covers, and the wear and tear of daily use made an end of them. The usual size was either about six by nine inches or nine by eleven

inches. Comparatively little color was used on the maps, and even at their newest the atlases must have looked dull and uninteresting. To modern eyes the oddest features of the maps are the vacant or mistaken outlines of the northern coasts of this continent, and the general blankness of all its western portion, with Mexico making a great sweep up into the present domains of our republic. Some of the African maps, too, are given a strange appearance by the portrayal of an immense line of mountains — the “Jibbel Kumra or M^{ts} of the Moon” — extending in a continuous and perfectly straight chain from east to west entirely across the broadest part of the continent.

Jedidiah Morse was the pioneer among American authors of school geographies, as I have explained in the previous chapter. The earliest rival to contest the field with Morse's books was a small volume of questions and answers compiled by Nathaniel Dwight and published at Hartford in 1795. Our own continent is confined to the final third of Dwight's Geography, while Europe, Asia, and Africa have the first two-thirds. How very remote and unfamiliar many portions of the globe still were can be judged from the fact that most of the capital cities in Africa and some even in Asia and Europe are located by giving their distance and direction from London. Thus, “Peterfburgh the capital of Ruffia is 1140 miles north-east from London. Pekin the capital of China stands eight thousand and fixty-two miles south-easterly of London.” Monomotapa, the capital of a country of the same

name "on the sea-shore in the southern part of Africa, is built with wood, covered with plaster and stands about 5,200 miles south-easterly from London." Other curious bits from the geography follow: —

Q. What are the Russian funeral ceremonies?

A. They are singular: The priest prays, and sprinkles the corpse for eight or ten days; it is then buried with a passport to heaven, signed by the bishop and another clergyman, which is put between the fingers of the deceased, and then the people return to the house whence they went, and drown their sorrow in intoxication. This they commonly do for about forty days, during which time the priest says prayers over the grave.

Q. Are there any lakes in Scotland?

A. There are many; but two are very remarkable: One near Lochness is on the top of a hill almost two miles high. This lake is small, but it has never been founded, nor does it ever freeze. About seventeen miles distant is another lake which is frozen all the year.

Q. What are the persons and characters of the Scots?

A. They are generally lean, raw-boned, and have high cheek-bones, which is a characteristic feature.

Q. What are the diversions of the Scots?

A. They are all of the vigorous, athletic kind; such as dancing, *goff* and *curling*. The *goff* is a species of ball-playing performed with a bat and a ball, the extremity of the bat being loaded with lead, and the party which strikes the ball with fewest strokes into a hole prepared for the purpose wins the game.

Q. What are the customs and diversions of the Irish?

A. There are a few customs existing in Ireland peculiar to this country. These are their funeral howlings and presenting their corpses in the streets to excite the charity of

strangers, their convivial meetings on Sunday, and dancing to bag-pipes, which are usually attended with quarreling.

Q. What curiosities are there in France?

A. A fountain near Grenoble emits a flame which will burn paper, straw, etc., but will not burn gun-powder. Within about eight leagues of the same place is an inaccessible mountain in the form of a pyramid reversed.

Q. What are the animal productions of Poland?

A. Buffaloes, horses, wolves, boars, gluttons, lynxes and deer. Besides these there is elk, which is said to be destroyed in the winter by flies who get into his ears and live upon his brain.

Q. What curiosities are there in Portugal?

A. There are lakes into which a stone being cast causes a rumbling like the noise of an earthquake.

Q. What do you observe of the inhabitants of Guinea?

A. They are chiefly pagans and idolaters. In Eyo, where the people are governed by a king who is not absolute, when they are tired of him, a deputation waits on him and informs him that it is fatiguing for him to bear the burden of government any longer, advising him to take a little rest. He thanks them and retires to his apartment as if to sleep, and directs his women to strangle him; and after he expires they destroy all things which belonged to him or to themselves, and then kill one another. His son succeeds to the government, and on the same terms.

Q. Give a concise description of the Giages and Annians.

A. The first inhabit a part of the Congo coast; the latter live in the Macaco. The people are cannibals. They kill and eat their first-born children; and their friends who die are eaten by their relations. The king of Macaco resides in Monfol, where there is a market in which human flesh is sold, although other meat exists in plenty. They esteem it a luxury, and it is said an hundred prisoners or slaves are daily killed for the king's table.

Q. What are the characteristics of the Hottentots?

A. They are the most abject of the human race. They besmear their bodies with soot and grease, live upon carrion, old leather, shoes, and everything of the most loathsome kind; dress themselves in sheep's skins, untanned, turning the wool to their flesh in the winter, and the other side in the summer. Their dress serves them for a bed at night, for a covering by day, and for a winding-sheet when they die.

Q. What is the temper of the New England people?

A. They are frank and open, bold and enterprising. The women are educated to house-wifery, excellent companions, and house-keepers; spending their leisure time in reading books of useful information.

Q. What are their diversions?

A. Dancing is a favorite one of both sexes. Sleigh-riding in winter, and skating, playing ball, gunning and fishing are the principal; gambling and horse-jockeying are practised by none but worthless people who are despised by all persons of respectability, and considered as nuisances in society.

Q. Are there any slaves in Massachusetts?

A. NONE.

One geography that had a marked individuality of its own was a thick little volume, mostly in verse, entitled *The Monitor's Instructor*, published at Wilmington, Delaware, in 1804. Speaking of himself in the third person in the introduction the author says, "Unpractised in poetry in a great degree, he has ventured thereupon supposing it to be, in general, rather more taking, with youth, than prose; and though not the most flowery cast, it will, he hopes, answer the end."

Now let the muse some incense bring,
As we the works of nature sing,

is the way he begins, and below are extracts culled here and there from succeeding pages : —

America (our native) streams,
Shall first awhile become our themes,
Both lakes and rivers, great and small,
Which in th' Atlantic Ocean fall.

After naming the more important coast rivers, the book remarks : —

Now o'er these streams thus having glanc'd,
And hastily, thus far advanc'd,
Not having left the sounding shore,
Next their main sources shall explore ;
And on the wing which poets feign,
Soar to each mount, skim o'er the plain,
To find the little purling rill,
And which the largest rivers fill.

* * * * *

One river, of enormous size,
To west of Mississippi lies. . . .
The river this call'd Missouri,
And tow'rd south-east its courses lie,
This river, from what I can see,
Can't less than the Ohio be.

Skipping to where the book is describing leading towns, we find these lines : —

An island is well known to fame,
Manhattan is this island's name. . . .

On sou'west end New York doth stand,
Investing all that point of land. . . .
Not fully regular it's plann'd,
Yet very elegant and grand. . . .
The streets present diversity,
And suited to conveniency,
The Broadway has still more of taste
Than any street in all the place. . . .
A street three-score and ten feet wide,
And gently rising from the tide,
Its edifices bold and grand,
Present themselves on either hand ;
The most magnificent of all,
Known by the name of Fed'ral Hall,
For pleasantness, it is agreed,
And health, few places this exceed.
In summer come, on every side,
The cooling breezes from the tide.
For winter mildness few excel
This city, of same parallel.

In the prose portion of the book are several curious "paradoxes." Here is one of them :—

Three men went on a journey, in which, though their heads travelled 12 yards farther than their feet, all returned alive, with their heads on.

The *Solution* explains that "If any person should travel round the globe, the space travelled by his head will exceed that his feet travelled" by about the number of yards mentioned.

The next geography from which I make selection is by Benjamin Davies. It was published in 1813.

The first two paragraphs quoted come under the heading "New Holland." This was the accepted name of Australia until the middle of the nineteenth century. The Dutch discovered the continent in 1616, but its size and shape were only vaguely known until Captain Cook explored most of the coast in 1770.

SOME suppose that this extensive region, when more thoroughly investigated, will be found to consist of two, three or more vast islands, intersected by narrow seas.

INHABITANTS. The black bushy beards of the men and the bone or reed which they thrust through the cartilage of the nose gives them a disgusting appearance ; which is not improved by the practice of rubbing fish oil into their skins as a protection from the air and moskitos ; so that in hot weather the stench is intolerable. The women are marked by the loss of the two first joints of the little finger of the left hand ; as they are supposed to be in the way when they coil their fishing lines.

MANNERS AND CUSTOMS IN THE UNITED STATES. Travellers have observed a want of urbanity, particularly in Philadelphia ; and in all the capital cities, an eager pursuit of wealth, by adventurous speculations in commerce, by land-jobbing, banks, insurance offices, and lotteries. The multiplication of inns, taverns and dram shops, is an obvious national evil that calls loudly for legislative interference ; for in no country are they more numerous or more universally baneful. Schools are spread everywhere through the well-settled parts of the country, yet the domestic regulation of children and youth is not duly regarded.

LANGUAGE. The English language is the general one of the union, and is cultivated with great assiduity in all the principal cities and towns. All the classical authors in the English language have been reprinted in America, many

of them have passed through several editions, some with great elegance and correctness.

BOSTON is built in a very irregular manner, on a peninsula, at the bottom of Massachusetts bay.

SOUTHERN MANNERS AND CUSTOMS. The inquisitive traveller as he progresses southward no longer beholds so great a proportion of hardy, industrious, and healthy yeomanry, living on terms of equality and independence; their domestic economy neat and comfortable; their farms well stocked; and their cattle sleek and thriving. On the contrary he discovers the farmhouses more thinly scattered, some of them miserable hovels; the retreats of small proprietors, who are too indolent or too proud to labour; here and there a stack of corn-fodder, and the cattle looking as miserable as their owners. A few miles distant perhaps he finds a large mansion house, the property of the lord of two or three thousand acres of land, surrounded by 50 or 100 negro-huts, constructed in the slightest manner; and about these cabins swarms of black slaves. But it is just to observe that many of the gentry are distinguishable for their polished manners and education, as well as for their great hospitality to strangers.

Cummings's Geography, 1814, apologizes in its preface for adding another "to the number of geographies, already so great as to obstruct, rather than promote improvement." This preface is very long, and is chiefly made up of directions "designed to assist teachers, who have had but imperfect, or no geographical instruction." It advises them to "let the pupils always set with their faces towards the north." Then with their maps before them they will be in proper position to get the points of the compass straight in their minds.

Early in the lessons we are informed that the "Alleghanies are in some places, immense masses of rocks, piled one above another in frightful precipices, till they reach the height of more than 10,000 feet above a level with the ocean." In reality not a peak reaches 7000 feet.

During the previous decade Lewis and Clark had made their journey across the continent, and we now find mention of the "Stony Mountains." It was a number of years before the name Rocky was substituted for Stony. On the maps they were sometimes labelled the Chippewan Mountains, and Workman's Geography, in 1805, says the ranges "that lie west of the river St. Pierre are called the Shining Mountains, from an infinite number of chrysal stones of an amazing size with which they are covered, and which, when the sun shines full upon them, sparkle so as to be seen at a very great distance."

In the descriptions of the states, we learn from Cummings that the western part of Pennsylvania abounds with excellent coal, but we get no hint of its having any commercial importance. Indeed, coal mining as an industry did not begin until 1820. Before that time coal was in the same category as were petroleum and natural gas, which the book calls "curiosities."

Concerning the Andes in South America, we are told, "These amazing mountains, in comparison with which the Alps are but little hills, have fissures in some places a mile wide, and deep in proportion; and there are others that run under the ground, and resemble in extent a province."

When we come to Europe, we are made to realize the intense cold of the Lapland winters by the statement that, "In attempting to drink the lips are frequently frozen to the cup." It is affirmed, too, that if there is a crust on the snow, "The Laplander travels with his reindeer in a sledge two or three hundred miles a day." Another queer bit is this about the roads in Flanders, an old-time province, which included all the coast region of Belgium and extended into France and Holland. "They are generally a broad causeway, and run several miles in a straight line till they terminate in a view of some magnificent building." These views no doubt gave pleasure, but I think I should have preferred to have the roads continue.

Presently we find the following paragraph :—

In the ocean there are many dangerous whirlpools. That called the *Maelstrom*, upon the coast of Norway, is considered as the most dreadful and voracious in the world. A minute description of the internal parts is not to be expected, since none, who were there, ever returned to bring back information. The body of the waters, that form this whirlpool, is extended in a circle about thirteen miles in circumference. In the midst of this stands a rock against which the tide in its ebb is dashed with inconceivable fury. At this time it instantly swallows up everything that comes within the sphere of its violence. No skill in the mariner, nor strength of rowing, can work an escape; the vessel's motion, though slow in the beginning, becomes every moment more rapid, it goes around in circles still narrower and narrower, till at last it is dashed against the rocks and instantly disappears. Nor is it seen again

for six hours; till, the tide flowing, it is thrown forth with the same violence with which it was drawn in. The noise of this dreadful vortex still farther contributes to increase its terror, which, with the dashing of the waters, makes one of the most tremendous objects in nature."

In another geography of the period we learn that even "the bellowing struggles of the whale have not always redeemed him from the danger," and that "the bottom is full of craggy spires." The real maelstrom is caused by the current of the Great West Fiord rushing between two of the Loffoden Isles. Ordinarily it can be traversed without apprehension, but when the wind blows directly against the current, the sea around for several miles is violently agitated and extremely dangerous.

Adams's Geography, 1818, is divided into three parts — Part I, "Geographical Orthography," consisting of ten pages of names of states, rivers, towns, etc., to be used as spelling lessons; Part II, "A Grammar of Geography," fifty pages, being an epitome of main facts "to be committed to memory"; Part III, "A Description of the Earth," making up the body of the book, "to be read in classes." The first four excerpts are from Part II, the rest from Part III.

A MOUNTAIN is a vast protuberance of the earth.

Europe is distinguished for its learning, politeness, government, and laws; for the industry of its inhabitants, and the temperature of its climate.

The *White Mountains* are the highest not only in New Hampshire, but in the United States.

Switzerland is a small romantic country, lying upon the

Alps, and is the highest spot in Europe. St. Gothard is the highest mountain.

Navigation on the *Mississippi* is attended with many difficulties and dangers, from the sudden crooks and bends in the river, the falling in of its banks, and more especially from the SAWYERS, so called, which are trees whose roots have by some means become fastened to the bottom of the

Country Store, exhibiting the Productions of Various Countries.

Frontispiece.

From Willard's *Geography for Beginners*, 1826.

Reduced one-third.

river, in such a manner, that, from the continual pressure of the current, they receive a regular vibratory motion from the resemblance of which to a saw-mill, they have derived their name. Their motion is sometimes very quick, and if they strike a boat, it is immediately upset or dashed to pieces. Vessels are from five to thirty days on their passage up to *New Orleans*, 87 miles; although with a favorable wind, they will sometimes descend in 12 hours.

From New Orleans to *Natchez*, 310 miles, the voyage requires from 60 to 80 days. Ships rarely ascend above that place. It is navigable for boats, carrying about 40 tons, and rowed by 18 or 20 men to the falls of *St. Anthony*.

Cataract of Niagara.

From Worcester's *Elements of Geography*, 1828.

The number of post-offices in the United States in 1811, was 2,043. The mail was carried 46,380 miles in stages, and 61,171 miles in sulkies and on horseback.

Several mineral springs break forth in different parts of the United States. The most celebrated are those of *Saratoga* and *Ballstown* in the state of *New York*. The latter place is much frequented by gay and fashionable people, as well as by invalids.

Beer is the common drink of the inhabitants of *New York State*. The forests abound with bears, wolves, deer, and elks.

Many of the towns and plantations in *Maine* are destitute of any settled minister. Missionaries sent among them have been affectionately received.

Water is brought to *Philadelphia* in a subterraneous canal,

from the Schuylkill, and is then raised by steam 30 or 40 feet to a reservoir on the top of a circular edifice, from which it is distributed by bored logs to the different parts of the city.

Pittsburg is supplied with foreign goods chiefly by land from Philadelphia and Baltimore. The price of waggon carriage this distance is from 5 to 6 dollars a hundred pounds weight. The number of inhabitants, in 1810, was 4,768.

A decade later, when Pittsburg had a population of seven thousand, the geographies speak of it as "one of the greatest manufacturing towns in the Union."

I quote further from Adams, beginning with what he has to say of "the floating mills for grinding corn, which are frequently seen on the Ohio River."

The mill is supported by two large canoes, with the wheel between them; this is moored wherever they can find the strongest current, nearest to the shore, by the force of which alone the mill is put in operation. It is floated up and down the river whenever a customer calls.

Natural Bridge of Virginia.

From Worcester's *Elements of Geography*, 1828.

The exports from *Ohio*, consisting of flour, corn, hemp, flax, beef, pork, smoked hams of venison, whiskey, peach brandy, and lumber are mostly sent down the Mississippi to New Orleans. Those boats which descend with the produce rarely return, but on arriving at New Orleans, are taken to pieces and sold for lumber.

Cincinnati is a pleasant, flourishing town. It contains about 3,000 inhabitants. In this town is fort Washington, which commences the chain of forts extending to the westward.

Detroit, the capital of Michigan Territory, is a place of considerable trade, which consists chiefly in a barter of coarse European goods with the natives for furs. The town is surrounded by a strong blockade, through which there are 4 gates. The streets are generally crowded with Indians in the day time; but at night they are all shut out of the town, except such as get admittance into private houses, and the gates are closed.

Whale Fishing.

From Worcester's *Elements of Geography*, 1829.

St. Louis, the capital of the Territory of Louisiana, contains about 200 houses and is well fortified.

The people of *Norway* are justly famed for honesty and industry, and retain their strength so long, that a Norwegian is not supposed incapable of labour, till he is upwards of 100 years old. The inhabitants in some of the interior parts it is said live till weary of life.

Treck-Shuit.

From Worcester's *Elements of Geography*, 1829.

In all the northern parts of *Russia* the winter cold is very terrible. Birds in the act of flying have sometimes been known to drop down dead from the atmosphere in consequence of it; drivers of carriages are frequently frozen to death upon their seats without being able to change their position. At Petersburg, only two months in the year are entirely free from snow.

The CONDOR is undoubted the largest bird that pervades the air. When it alights on the ground, or rises from it, the noise it makes with its wings is such as to

terrify and almost to deafen any one who happens to be near the place.

Among the animals peculiar to South America, the most extraordinary is the SLOTH, or as it was called by the way of derision, the swift Petre. It is about the size of an ordinary monkey, but of a most wretched appearance. It never stirs unless impelled by hunger; it is said to be several minutes in moving one of its legs. Every effort is attended with a most dismal cry. When this animal finds no wild fruits on the ground, he looks out with a great deal of pain for a tree well loaded, which he ascends moving and crying, and stopping by turns. At length, having mounted, he plucks off all the fruit and throws it on the ground, to save himself such another troublesome journey; and rather than be fatigued in coming down the tree, gathers himself in a bunch, and with a shriek drops to the ground.

Bridges in Chili.

From Woodridge's *Rudiments of Geography*, 1829.

A similar description of the sloth in Dwight's *Geography* includes the statement that "It is so many days travelling from one tree to another, that it frequently grows lean during the journey."

Peter Parley's Method of telling about Geography, 1829, was a thin, square little book with leather back and flexible pasteboard sides. For years it had an

PETER PARLEY
Going to tell about Geography.

Take care there! take care boys! if you run against my toe,
I'll not tell you another story!

Frontispiece to *Peter Parley's Geography*, 1830.

immense circulation. The style is simple and colloquial; there are numerous pictures and a variety of maps and diagrams. Perhaps the portion best re-

membered by those who studied the book is a rhymed review of the earlier lessons, beginning —

The world is round, and like a ball
Seems swinging in the air,
A sky extends around it all,
And stars are shining there.

Pains are taken to inculcate good morals and religion, and we find in treating of Asia considerable

English.

for pies.

From *Peter Parley's Geography*, 1829.

Bible history with appropriate comments. "This history," the author says, "is exceedingly interesting, and is all true. A great part of the history of almost all other nations is false; but the Bible tells us nothing but what is worthy of belief."

The Malte-Brun Geography, 1831, was also written by "Peter Parley," but the materials for the book were drawn chiefly from the large work by the noted French geographer, whose name gives

the book its title. Selections that show something of the character of the book and of the times follow:—

Occasional bands of white hunters and trappers range the Missouri Territory for furs. Some of them extend their expeditions to the foot of the Rocky mountains, and some to the shores of the Pacific. The herds of buffaloes that are seen in this territory sometimes amount to 10,000 each. When the herd is moving, the ground trembles, and the grumbling and bellowing of the multitude is heard for miles.

Norwegian.

Paris sets the fashions for Europe, and in some measure for America. An immense trade is here carried on in

articles of dress. Every week the female fashions are changed, and every month there is a new cut for male attire.

From Woodbridge's *Universal Geography*, 1833, a large thick volume for advanced scholars, I make this extract:—

In 1790 the extent of post-roads in the United States was only 1875 miles; in 1827, it was 105,336. The great roads are usually turnpikes constructed by the state or incorporated bodies and supported by tolls. New England, and the greater part of the Middle States, are intersected in every direction by roads, which are usually well constructed and in good repair.

In the sandy, alluvial country of the Atlantic coast from New York to Florida, the roads are heavy, and not easily improved. The scattered state of population has prevented much attention to roads, in the states south of Maryland: and frequent impediments are presented by the want of bridges and causeways, over the streams and marshes.

In the Western States, during the wet season, many roads are scarcely passable for wheel carriages. The travelling in these states is chiefly by steam boats, on their noble rivers. The small streams are so variable that most of them can be forded during the dry seasons, and bridges are rarely built. The banks are high and steep, and the difficulty of passage is often very great. During high water, many of the streams become impassable, and the traveller encounters serious dangers.

The most important post-road in the United States is that which traverses the states on the Atlantic, a distance of 1,800 miles, passing through all the principal towns from Robbinstown in Maine to Florida.

A plan has recently been invented for constructing roads with iron bars, or railways, on which the wheels of carriages run so easily that they may be drawn from 15 to 30 miles an hour, by means of locomotive steam engines.

Peter Parley, in one of his geographies published in 1837, says of the railroads:—

Progress of Improvement.

From *The Malte-Brun School Geography*, 1842.

They are found so useful, that, for carrying passengers from one place to another, they have, on many routes, taken the place of stage-coaches. When the cars first began to run, it was amusing to see the astonishment of the horses and cattle, as the engines came snorting, smoking and puffing over the road. You have heard of the rail road from Boston to Worcester. Near the latter place is an Insane Hospital, which commands a view of the road. When the first car came into Worcester, a crazy man was looking out of the window. "Upon my word," said he, "that's a strange-looking beast and travels desperate fast for such a short-legged crittur."

Scene in Illinois.

From *The Malte-Brun School Geography*, 1842.

Peter Parley's National Geography, 1845, was the earliest, I believe, to take the large, flat quarto

Pilgrims landing at Plymouth.

shape. This form enabled it to include good-sized maps and do away with the necessity for a separate

atlas; and in a few years the 12mos had been entirely abandoned. The chapters of the *National Geography* were enlivened with poetical introductions, and there were occasional other verses. The following selection, the last I have to make from the geographies of our forefathers, is this jingle description of "a general custom of moving, in the city of New York, on the first of May."

Bustle, bustle! Clear the way!
 He moves, they move, we move, to-day;—
 Pulling, hauling, fathers calling,
 Mothers brawling, children squalling,
 Coaxing, teasing, whimpering, prattling;
 Pots and pans and kettles rattling;
 Tumbling bedsteads, flying bedspreads,
 Broken chairs, and hollow wares,
 Strew the streets — 'Tis *moving* day!

Battle of Lexington.

XIV

GRAMMARS, HISTORIES, AND MINOR TEXT-BOOKS

THE two most successful makers of text-books in the period immediately following the Revolution were Noah Webster and Caleb Bingham. The former's spelling-book outstripped the latter's *Child's Companion*, but none of Bingham's books were failures, and his *American Preceptor* and the *Columbian Orator* were more widely used than Webster's readers or any others.

Caleb Bingham was born in what was then the new town of Salisbury in the northwestern corner of Connecticut in 1757. Many Indians still dwelt in the vicinity, and they were of such doubtful character that the people had always to be on their guard against a treacherous assault. Sundays the pioneers went to church armed; and the log structure used for a meeting-house had portholes, and a sentinel was stationed at the door. These frontier conditions gave little chance for education, but tradition says Caleb studied with the minister and thus prepared for college. He entered Dartmouth in 1779, and as soon as he graduated began to teach.

He came to Boston in 1784, and established a school for girls, but presently gave this up and taught in the public schools of the city. Still later he became a bookseller and publisher. He was an old-fashioned man, and almost to the time of his

death, in 1817, went about attired in a cocked hat and small clothes, white vest and stock, and black silk stockings. In summer he wore shoes with silver buckles, and in winter white-topped boots.

Next to his reading-books, Bingham's most famous publication was "*The Young Lady's Accidence: or a short and easy Introduction to English Grammar. Designed principally for the use of young Learners, more especially those of the FAIR SEX, though proper for either.*" The title-page also contained this couplet:—

Delightful task! to rear the tender thought,
To teach the young idea how to shoot.—

The date of the first edition was 1799. The book treats the subject with admirable simplicity and clearness, the type is good, and the little volume is a very pleasing contrast to the dull, crowded pages of nearly all the other grammars of the time. A hundred thousand copies are said to have been sold. It was the first English grammar used in the Boston schools, and was one of the earliest grammars ever prepared by an American author, its only predecessor of importance being Part II of Webster's *Grammatical Institute*. Both these books gave place to the grammar by Lindley Murray, which in its numerous abridgments was used for several decades almost to the exclusion of every other work dealing with the subject. Murray was born in Pennsylvania in 1745, and as a young man acquired considerable reputation and wealth as a lawyer in New York City. But in 1784 he went to England to reside, and it

was there he wrote his grammar, published in 1795, and his several other school-books brought out within the next few years. Mr. Murray is described as modest in manner, humane and generous, and, in spite of bad health, unfailingly cheerful. His books were all works of solid merit, though not very palatable to children. The grammar looks dreary to the last degree now, and it must have had something of the same aspect even in the heyday of its popularity. There is a tradition that a friend of the author's once said to him, "Of all contrivances invented for puzzling the brains of the young your grammar is the worst," and this anecdote is quite believable. Murray, however, introduced system into the treatment of the subject, and is known not unjustly as "the father of English Grammar."

PRONOUNS.

A man has stolen a bundle, and *he* is running away with *it*.

Here *he* and *it* are pronouns, because they stand for nouns, and save the trouble of repeating them. If it were not for the pronouns, we should have to say, a man has stolen a bundle, and the man is running away with the bundle; but the pronouns save the necessity of repeating the words *man* and *bundle*.

From *Murray's Grammar*, adapted to the present mode of Instruction by Enoch Pond, 1835.

The study had been adopted in nearly all the schools by 1810, yet few teachers explained its intricacies or did more than make it a drill. The pupils understood little of what the books were intended to impart, and their interest

INTERJECTIONS.

OH! my poor brother.

was always at the ebb. It is related of a Pennsylvania school, about 1795, that some scholars, after a short experience with the new study, finding they could make nothing of it, got parental sympathy in their troubles and each came to the master with the report that: "Daddy says I needn't larn grammar. It's no use."

That particular master was a grammatical enthusiast and would not let them off. He tried to give the science practical application, and for the purpose of correcting the boys' language while they were at play, he whittled a small piece of thin board into the shape of a paddle. Whenever a boy used a wrong expression, he had to step aside and take the paddle, and he could not play again until he detected some

PASSIVE VERBS.

My knife has been opened. My scissors have been ground.

From Enoch Pond's *Murray's Grammar*.

other lad in a grammatical mistake. Then the badge of interdiction was transferred. As a result of this system the scholars became very critical and made marked improvement in their speech.

The most attractive edition of *Murray's Grammar* was "one adapted to the present mode of instruction," by Enoch Pond, Worcester, 1835, a thin little volume with many small engravings illustrating the parts of speech.

Another illustrated text-book dealing with this subject was *The Little Grammarian*. It was of English origin, but was republished in New York in 1829. The text made clear "the leading rules of syntax in a series of instructive and amusing tales."

The pictures consisted of twelve half-page steel engravings made to accompany the stories. The author says of his system that he is trying to make agreeable "a subject naturally dry and tedious in the same way that the skilful apothecary gilds his pill and colors the otherwise nauseous draught." Each chapter takes a part of speech, and the narrative in that chapter has that part of speech printed in italics as often as it occurs. These emphatic words occur so often they make the text pages look very queer. Just how effective this method is can be judged from the specimen which follows:—

ADVERBS.

The ship sails SMOOTHLY.

The cars go SWIFTLY.

From Enoch Pond's *Murray's Grammar*.

THE ROBBER AND LITTLE ANN.

Some few years back, *a* poor man, living on one of *the* moors in *the* North of England, whilst busily employed in cutting turf, was cruelly beaten by *an* impious man, because he would not give him his watch and *the* little money he had in his pocket.

The Assault.

From *The Little Grammarian*, 1829.

His little girl (about three years old) had been to visit him, and was asleep on *a* bed of heath at *the* time her father was attacked; but his cries awoke her just in time to catch *a* sight of *the* barbarous thief, as he turned away from *the* mangled and almost lifeless body of her parent. Poor little Ann cried most bitterly as she assisted her poor father in his efforts to reach home, which, after more than *an* hour's toil, he accomplished.

A year or two later little Ann saw *the* assailant at *an* inn and ran into her father's hut in great affright, and called

out, as she swooned away, "I have seen *the* man"; more she could not say for tears and faintness. Her mother said to her husband, "Did you not hear her say *the* man? If

before she had been able to tell her parents what she really meant: hence learn the great difference between *a* or *an* and *the*.

A Boston edition of *The Little Grammarian* was also published, but a good deal of matter was added, and, instead of illustrating the stories, the pictures

were confined to showing the meaning of the parts of speech.

A very fully illustrated book dealing with a sub-

Girl learning her lesson.

Description of picture. Old-fashioned furniture. Girl's attention not diverted by her pets. She seems to have nearly learned her lesson and to be just ready to start for her school.

From *Frost's Easy Exercises in Composition*, 1839.

ject allied to grammar was Frost's *Easy Exercises in Composition*. There were two or three pictures to a page right through the first half of the book, each with a few lines of suggestion under them. By this combination of pictures and short hints the pupils were expected to speedily and easily acquire "the art of expressing their ideas in writing."

Children promised a summer holiday.

Description. Pleasure of anticipating a holiday. Inducement to study hard, and behave well.

From Frost's *Easy Exercises in Composition*.

History was not taken up in the schools until the nineteenth century was well begun. One of the earliest histories of the United States, prepared for school use, was "by a citizen of Mass.," who states in his preface that, "while our schools abound with a variety of reading-books for children and youth, there has never yet appeared a compendious History of the United States fitted for our common schools."

This was 1821. The book was a small volume in full leather without maps or illustrations.

The next year the Rev. C. A. Goodrich published his history, which for a long time surpassed all rivals

Capt. John Smith defending himself from the Indians.

From Goodrich's *A History of the United States*, 1832.

in popularity. Within a dozen years one hundred and fifty thousand copies had been sold. It appeared in various editions, some entirely lacking pictures and none with more than a few insignificant cuts until 1832. Then it was produced in a thick 12mo with forty-eight engravings and a map. Good paper was used and the pictures were excellent for the time, and very well printed.

In 1832, also, Noah Webster put forth a school *History of the United States*, to which was "prefixed a brief Account of our [English] Ancestors, from the dispersion at Babel, to their Migration to America." The book ends with the adoption of the Constitution, because, as Mr. Webster explains, "An impartial history cannot be published during the lives of the principal persons concerned in the transactions related, without being exposed to the charge of undue flattery or censure; and unless

Destruction of Tea in Boston Harbor.

From Goodrich's *A History of the United States*.

history is impartial, it misleads the student, and frustrates its proper object." The individuality of the book is farther emphasized by a chapter of "Advice to the Young"—economical, moral and

religious — which the author hopes will “serve, in a degree, to restrain some of the common vices of our country.”

Other early school histories of the United States which attained more or less circulation were Hale's, Taylor's, Olney's, and Peter Parley's, the last running up into hundreds of editions. The study of history was not confined wholly to the story of our own nation. Several universal histories were published. Butler's, the earliest to be brought out, included, according to the title-page, “History, Sacred and Profane, from the Creation of the World, to the year 1818, of the Christian Era.” It was very Biblical, the author's “first object through the whole work being to show the influence and impor-

Punishment of a man from Billerica, who purchased a gun from a British soldier in Boston, March, 1775.

tance of religion — to contrast particularly the religion of Christ and his Apostles, with the religion of

Capture of the Frolick, October 18, 1812.

From Taylor's *A Universal History of the United States*.

the Popes and Mahomet; and to show that Martin Luther was the angel of the gospel for the age in which he lived, and will continue to be the angel of the gospel until the millennial day." The book is illustrated with a number of full-page copper-plate engravings. The one reproduced purports to be a representation of Moscow in flames. The flames are genuine enough, but the city, with its clap-boarded houses and slender church spires, bears a

suspicious resemblance to the American towns of the period.

Of the other early Universal Histories I will only speak of that by Rev. Royal Robbins, published at Hartford in 1835. It tells the scriptural story

Landing of Columbus.

From Frost's *A History of the United States*, 1837.

of the Creation, "about 5829 years ago," and then mentions, "as a matter of curiosity," a few theories of philosophers and others which do not agree with the Bible narrative. I quote two of these theories and add a few paragraphs from subsequent pages of the book about Adam and Eve.

The negroes of the Congo affirm that the world was made by the hands of angels, excepting their own country, which the Supreme Being constructed himself; that he took great pains with the inhabitants, and made them very black and beautiful; and when he had finished the first man, he was well pleased with him, and smoothed him over the face; and hence his nose, and the noses of all his descendants became flat.

"Conflagration of Moscow."

From Butler's *Sketches of Universal History*, 1818.

Darwin, an infidel, in accounting for the origin of the world, supposes that the mass of chaos suddenly exploded, like a barrel of gunpowder, and in that act exploded the

sun, which in its flight, by a similar convulsion, exploded the earth, which in like manner exploded the moon, and thus, by a chain of explosions, the whole solar system was produced and set in regular motion.

Adam and Eve, the names of the first human pair, were placed by the Diety, in the garden of Eden. It is evident that Eden was east of Canaan; but the most extravagant opinions have been entertained on this subject, and not only the four quarters of the globe, but even the

Demosthenes declaiming upon the Sea-shore.

From Whelpley's *Compend. of History*, 1825.

air and the moon, have been conjectured to include this delightful abode.

The innocence and felicity of the first pair were of very short duration. They violated, with daring impiety, the sole command of their Maker. The precise time of this transaction cannot be determined; but it was probably only a few days after their creation.

The story goes on until we come to the flood, which we are assured must have happened because, "In agreement with the universal voice of tradition, the surface of the earth, in various respects, indicates the occurrence of such a catastrophe. Its broken state, the disposition of its strata, and the remains of marine productions on the tops of the highest mountains, are no doubtful evidence on this subject."

In the second quarter of the nineteenth century, not only did books multiply, but also the subjects included in the school curriculum. I have noted all the studies ordinarily taken up, but occasionally

1 Labyrinthidon.

2 Dinotherium.

3 Birds.

Frontispiece to Godding's *First Lessons in Geology*, 1846.

others were introduced, such as botany, geology, natural philosophy, physiology, etc. Economics was even included in the curriculum of some schools. The most individual of early text-books dealing with this topic was *The Young American* by S. G. Goodrich, a simple and entertaining dissertation on "government and law; showing their history, nature, and necessity." It had the usual merits of "Peter Parley's" books, and without reaching any very

Taking a thief to prison.

From Goodrich's *The Young American*, 1842.

superior or lasting excellence was easy of comprehension and reasonably authoritative. The interest was much increased by numerous pictures. Another book, dealing with the more profound things of life, and yet nevertheless much in vogue in the old district schools, was *The Improvement of the Mind* by Isaac Watts. It was a lengthy disquisition on the acquiring of knowledge and character. The book was generally spoken of as "Watts on the Mind,"

and the title was so printed on the back of the volume. To the younger scholars the title was a puzzle. They could understand having "watts" on the hand, or even "watts" on the nose; but to have "watts" on the mind did not seem possible.

Neither this book nor the others concerned with advanced and special studies impressed themselves on the pupils as did the more elementary studies which have been particularly my theme. With few exceptions all the books showed narrowness and crudity, but time brought a steady improvement. By 1850 the formative period in the manufacture of school-books was over; yet while the later books are much better than the old, they have not the picturesque interest and antiquarian charm that belong to beginnings, and they do not come within the scope of this record of Old-time Schools and School-books.
